WHO SHOULD STUDY THIS COURSE?

This course is not for beginners. You need a little knowledge and ability before studying this course. Usually a year or so of basic study is enough preparation.

HOW LONG WILL IT TAKE?

It's really dependent on your quality of practice and intensity. You could go from beginner to performer in a few years with good smart work.

Think of it as an ongoing study for the rest of your life. You'll get deeper and deeper into it. Call it a few thousand quality hours to get a thorough start on the entire course.

globalizing musical structure and design

View "[Globalizing Musical Structure and Design](#)" to see what is needed for each style.

HOW SHOULD YOU PRACTICE?

High Quality Practice

“dialing up” the emotive intensity of your engagement like an actor

Control the intensity and tone of your practice like an actor calling up an emotion to play a part. Act engaged and alert and you will be that way. Always think positive and “dial it up”.

Practice things you will actually use in playing music. You will do much better if you are engaged in what you are doing. Choose pieces you can get into. Study a few pieces in a row that develop a particular technique or design.

Breathe and use good posture.

repetitions geared for retention

repeating cycles Use high-intensity training as in sports. Practice something you can accomplish within a ten or twenty minute session. You should usually practice repeating phrases that take under a half minute to play once. Perform the phrase over and over with a high degree of focus.

During repetitions of a phrase or exercise, you will usually improve gradually. At some point you will fatigue and start getting worse, usually after a few minutes. Acknowledge the point of fatigue and rest about half the time you practiced. Really rest, don't play. Then repeat the cycle (repeat until fatigue, then rest) five or ten times.

play enough cycles to retain Adjust the number of cycles (a set of a repeated event, followed by rest) so you will remember the item the next time you practice. As you get to know your practice habits you get better at predicting the necessary number of cycles for retention.

multiple contexts

Think the song in terms of how it makes you feel. What it sounds like. The melody. The chord progression. The rhythm. The emotive curve, building to a climax near the end.

If you know the piece well in many of these contexts you'll more easily retain it in your memory and more fluently make enhancements to it.

Build modules into larger knowledge and ability. Break down things you are learning to do into small units and plan on putting the units together. For example, memorize phrase by concentrating on the note pattern with the fretting hand separately from picking or plucking hand. Do whichever first is easier, then add the other. Build the phrases into an entire piece.

Avoid Redundancy and Memory Loss

To avoid redundancy and memory loss, wait an appropriate number of days to practice a song or study again so you have no trouble remembering it and retaining proficiency at playing it. Don't practice an item too soon if there are other songs or studies that need work sooner. Technical studies need to be practiced closer to daily.

Practice each item enough that you will remember it until the next time you practice. Learn to predict how many times you need to repeat something in practice to remember it for a given number of days. The number of repetitions would be different according to the difficulty of the piece and your goal number of days. Hypothetically, if a particular person practiced a particular four bar section fifteen times, and was therefore able to remember it for four days: in three days it would be redundant to practice it and in five days you would experience some memory loss. The periods of time between practice of any particular item should be of increasing lengths of time, as you build a stronger memory.

Practice each phrase with enough repetitions to remember it while you are working on the next phrase. By studying multiple aspects of a piece such as technique, rhythm, phrasing and harmonic theory, you build memories in different parts of your brain and therefore create a greater total awareness of the piece.

Learn the Part Right in the First Place

Get it right in the first place. It is a waste of time to have to go back and re-learn parts.

Practice new material within 48 hours of a lesson or media study, preferably the same day as the lesson or media. Use visual input (tablature, diagrams, standard notation or watching a video with cueing ability) very carefully at first, while you are memorizing the part.

study techniques

Develop principles of study techniques and drills creatively to meet challenges in your playing of songs. Isolate difficult sections and practice them slower at first. Isolate any difficult technique required for each hand, such as practicing chord fingerings with a simple strum.

Learn to make up exercises to overcome difficult sections that trouble you. Break the troublesome part down to components and work on each separately. For example, count and clap the rhythm. Go over the fingering first without rhythm. Then put the two together. If a fretting technique is difficult for you, make up an exercise for it. Always make your exercises musical, so they have some relationship to something you will play.

fingering

Carefully learn each note with good principles of fingering. Take advantage of the more capable fingers, sometimes avoiding fretting with the little finger. When avoiding use of the little finger, you typically will span two frets with the index and middle fingers, with an “empty” fret between them.

Prepare for the occasions when the little finger should be used by heightening the ability to fret with the little finger. This is typical of more complex parts that use four consecutive frets on the same string or patterns like whole step (two frets), half step (one fret) on one string and half step, whole step on the next, as shown below in playing ascending notes from the second through first strings. It doesn't matter what position (fret) you play this at.

			1	1
				2
			3	
			4	4

rhythm

If you are reading tablature or if you are reading music without a great reading ability, be sure to listen to any available recordings to mimic the rhythm. Learn the placement of each note (or group of notes) in relation to the beat. Progressively establish an even tempo.

In three steps: count the rhythm, then vocalize it, then memorize its sound. Start looking at the standard music notation above the tablature to get graphic cues as to the duration of notes, even before you completely understand how to read it.

Progressive Study

Work on music that is a little challenge for you, so you can accomplish in a few weeks at most. Start at a tempo that is slow enough that you make 5-10% errors. Work until perfect, then increase the tempo slightly. A phrase is around 8-20 events (notes or chords). Practice short phrases, then join them together.

learning with recordings

- ✦ Play with the original recording slowed down enough to allow you to play with it. Gradually increase the speed of the recording, so you can keep up with it.
- ✦ Learn to play the melody and chords separately first.
- ✦ If the part you are learning can be sung, sing it along with the original recording and sing the before you play it on the guitar. Then play it while you are singing.

- If you can play the chord progression while singing the melody, do it.

media aids

Software can enable you to slow down songs, change them to the key you need or cue sections of the songs for study.

On an Apple Macintosh computer, you can use Amazing Slow Downer at <http://www.ronimusic.com> or Anytune at: <https://anytune.us/products/anytune-for-mac>

On a PC, you can use Windows Media Player as follows: Begin playing a file. Click the arrow below the “now playing” tab, point to “enhancements”, and then click “play speed settings”. Move the “play speed” slider to the speed at which you want to play the content, or click the “slow, normal, or fast” link. To select speeds between the labeled play speeds, in the “enhancements” pane, clear the “snap” slider to common speeds check box. To hide the settings, click the “close” button in the “enhancements” pane.

Play with a metronome <https://www.onlinemetronome.app/80-bpm-metronome>

Record yourself on one channel with the original recording on the other channel with software like Garageband or Logic Pro X on Mac or with Pro Tools on PC (there’s a free version).

practice with a looper

It’s great to practice with a looper, especially if you re-record the accompaniment every time, so you get better at it. My favorite loopers are the Boss RC-1, Boss RC-2 and the TC Electronics Flashback series.

GOOD THINGS TO STUDY FIRST

Reading Tablature and Chord Diagrams

If you are not already able to read chord diagrams and tablature, see “[Chord Diagram and Tablature Quick Start](#)”.

Chords and Scales

Your first approach to most songs should be strumming or plucking the chords and thinking the melody. To be able to do this, study “[Fingering Common Chords](#)”. Use them in songs and in the progressions used below in “[Learning Keys With Chord Progression](#)”.

Number and Letter Cycles

Study the [number and letter cycles](#) in Note Sets, Structures and Design. You should begin with stepwise, thirds and fourths in numbers in the key of C (all natural notes). Then relearn to rotate each cycle so it aligns each of the other keys with “1” in the cycle and apply the [key signature](#). For example, the cycle of thirds for D major would start with “D” at the “1” and cycle around with the letters “D-F-A-C-E-G-B D”, just like the did in the C major cycle, except sharp the “C” and sharp the “F”.

Octave Shapes and Intervals

Learn at least to identify each of the five [octave shapes](#). Learn the intervals necessary to construct a major chord.

Rhythmic Words and Comping Rhythms

rhythmic words

Like the words that make up our verbal languages, music is made up of common short rhythms, which I call *rhythmic words*. Start building your library of rhythms by memorizing the most common rhythmic words to both recognize them when you need them in playing songs and to improvise rhythms in your own accompaniment and solo parts.

comping rhythms

Comping rhythms are used to create accompaniment parts. Memorize them and learn to vary them. You can memorize them by ear in the [Comping Rhythms](#) section of “[Rhythmic Words And Comping](#)”.

Major Scale Note Names

learn major scale note names first by playing chord progressions

Song are built with scales. Learn the names of the notes in each major scale by playing chord progressions that each use a single major scale. Once you have many memories of chord progressions that each use the notes of a major scale, the note names in every major scale can be more thoroughly memorized with the system of key signatures.

The roots of the songs will teach you the names of the notes in each major scale, starting with chords built on I, IV and V (the first, fourth and fifth steps of each of the keys). Then you can use them to progressively use more keys and chords built on each of the steps of the scale. After I, IV and V, we'll first add VI_m (six minor).

Learn the step to step intervals by number in major scales in the [number and letter cycles](#) section of "Note Sets, Structure and Design". III to IV is one fret. IV to V is two frets. V to VI is two frets, and so on. Each major scale uses all seven letters, A through G. Each letter is used only once.

I, IV and V are easy to figure out in any key. You just need to get a sense of the notes that need sharps or flats. IV to V is two frets, so if IV is B (as in the key of F#), V has to be C#, since B to C is only one fret. In the key of F, IV has to be B_b, since III to IV needs to be one fret, III is A, so B has to be flat to make it one fret from III to IV.

The chart below can be used to figure out each of these progressions in every key. The chart is in the order of keys (going down vertically) you should use to learn the progressions in all keys.

major scale-tone triads in all keys

major scale-tone	1	2	3	4	5	6	7
major scale-tones	1, 3, 5	2, 4, 6	3, 5, 7	4, 6, 1	5, 7, 2	6, 1, 3	7, 2, 4
quality	major	minor	minor	major	major	minor	diminished
formula on root	1, 3, 5	1, b3, 5	1, b3, 5	1, 3, 5	1, 3, 5	1, b3, 5	1, b3, b5
roman numeral name	I	II _m	III _m	IV	V	VI _m	VII _{dim.}
no sharps nor flats							
literal names in C	C	D _m	E _m	F	G	A _m	B _{dim.}
keys with sharps							
literal names in G	G	A _m	B _m	C	D	E _m	F# _{dim.}
literal names in D	D	E _m	F# _m	G	A	B _m	C# _{dim.}
literal names in A	A	B _m	C# _m	D	E	F# _m	G# _{dim.}
literal names in E	E	F# _m	G# _m	A	B	C# _m	D# _{dim.}

literal names in B	Bb	Cm	Dm	Eb	F	Gm	Adim.
literal names in F#	F#	G#m	A#m	B	C#	D#m	E#dim.
literal names in C#	C#	D#m	E#m	F#	G#	A#m	B#dim.

keys with flats

literal names in F	F	Gm	Am	Bb	C	Dm	Edim.
literal names in Bb	Bb	Cm	Dm	Eb	F	Gm	Adim.
literal names in Eb	Eb	Fm	Gm	Ab	Bb	Cm	Ddim.
literal names in Ab	Ab	Bbm	Cm	Db	Eb	Fm	Gdim.
literal names in Db	Db	Ebm	Fm	Gb	Ab	Bbm	Cdim.
literal names in Gb	Gb	Abm	Bbm	Cb	Db	Ebm	Fdim.

Learn the Minor Pentatonic Scale and a Few Licks

Short melodic ideas called licks, riffs, motifs or cells are the building blocks of improvisation by ear. Cells are the shortest ones. You'll learn to modify the ones you've memorized and adapt them to fit on new songs.

Study some of the solos in "[Improv Level 1-Improv By Ear](#)", learn a [pentatonic scale fingering](#) or two and start experimenting with licks you'll find in "[Blues Rock and Swing Blues Cells](#)".

PLAYING POSTURE

I like the combination of my player-specific point of view on guitar playing posture and Ethan Kind's anatomical point of view. Ethan wrote a series of books, curiously available only in Kindle book format on [Amazon.com](https://www.amazon.com). You can get a free Kindle reader from Amazon for your PC or Mac. Check out [An Alexander Technique Approach to Jazz and Rock Guitar Technique](#).

Feel your body and relax all the muscles you don't need for your activity. The most common cause of fatigue, stress and injury on the guitar is caused by tightening muscles that you don't need. Use only the pressure needed for fretting, adequate tension for form, no more, no less.

Keep your lower back in its nearly straight, naturally-curved shape. Since you are reaching around in a circular manner (seen from an aerial view), your upper back is slightly rounded. Your shoulders should not be forward of the clavicle by more than about a half inch.

Keep the head of the guitar at least as high as the bridge. I keep the neck at more than 45° to the floor.

Sitting Posture

Sit where your knees are at least as high as your hips. The rounded part of the guitar in the middle of its body is meant to rest on your leg. In classical guitar style, you can raise the knee on the fretting hand side with a foot stool to allow the fretting hand arm to bend less at the wrist. Flamenco players put the ankle on the fretting hand side on top the leg on the fretting hand side, just before the knee.

Using a foot stool or similar device, elevate your fretting-hand foot six to nine inches to raise your upper leg on your fretting hand side. Put the other foot flat on the floor. I built a wood block assembly with 4"X4" wood, strapped it together with cable ties, screwed it to a 1" solid wood base. I got tired of foot stools breaking.

Avoid bending your fretting-hand wrist. When you need to bend it, try to make it momentary.

Tilt the upper part of the guitar body toward you about two to six inches (from a vertical position). Don't lean over and look at the fretboard much. Learn to look at the edge of the fretboard and feel where your fingers are on the fretboard. You won't develop a good spacial sense otherwise.

Keep the neck of the guitar about one open hand span away from your fretting hand shoulder. This will help in keeping your fretting hand wrist straight. Rather than keeping your fretting hand fingers parallel to the frets, generally play with your fingers angled to the frets about 10° to 20°, so the tip of the index finger is right up against the fret, but the base of the index finger is over half way toward the next fret on the head side. This is very similar to the fingering hand posture of a violinist.

tweaking of the distance between the neck and the fretting hand shoulder

The distance can be tweaked by fretting four-finger G chord (sixth through first string GBDGDG), then moving it to the seventh fret (first finger at the seventh fret). Start with the neck three or four inches from your fretting hand shoulder. Unless you have extreme hyper-extension in your fingers (one of my students can bend each finger tip to a full 90°!), when you get to around six to ten inches between your fretting hand shoulder and the guitar neck, the fifth string should become muted by the fretting hand second finger. Find the “tipping point” distance where this begins and use the distance and inch or two closer to your shoulder as a safety margin.

Standing Posture

Sitting posture should generally mimic standing posture in regard to the angle of the neck, the distance from the fretting-hand shoulder and the distance in tilting the guitar back from the imaginary vertical plane.

Most of us sit too much. I had major back surgery a few years ago, primarily caused by too much sitting. Alternate your playing between sitting and standing. Take a five minute break every 20-30 minutes.

Globalizing Musical Structure And Design

- **The Creative Power of The Mind**
- **Globalization Defined**
- **Theme and Variation by Globalizing**
- **Globalization Style Tables**

This course is about melodic and harmonic (chordal) improvisation. You will learn how to quickly expand what you know. The first part six parts of the course cover Melodic Improv, followed by two parts on Harmonic Improv. The last part has studies on Favored Songs and has Quizzes.

THE CREATIVE POWER OF THE MIND

Our Uncanny Ability to Apply Designs

As long as the set of notes or rhythms is straightforward, like a scale or a regular rhythm, we have an amazing ability to learn a pattern on one scale or arpeggio and apply it to another, or play a rhythm starting on one beat, then play the same one starting on a different beat. For example, if you learn the fragment pattern “1234” on a pentatonic scale, you can then apply it to any scale or arpeggio without much of an adjustment. The main task was learning the treatment of the scale.

Let’s say we play a “1234” fragment with three notes per beat, starting on the beat. The pattern doesn’t begin on the beat again until we have played twelve notes (three times four). We then can begin to hear that entire sequence of twelve notes as a new fragment pattern. Further, it doesn’t matter so much what scale or arpeggio we play it on, we understand the treatment and can hear the 12-note sequence.

Improvised Ideas Can Be Very Complex

Once we know sets of notes like scales and units of rhythm like rhythmic words and ways to design them, we can start creating abstractly. We can learn to predict the sound of each individual note in a scale, then let the mind predict the sound of a group of them, telling us what to play.

When we analyze what our right brain has created in free association with our mathematical/logical left brain, it usually gets very complicated. Improvising on a blues with minor pentatonic scale seems really simple to do and easy to hear. But, when you analyze what has been done to contradict some of the chords and find relationships common to a few chords, it gets really complex. See the chapter “[Modes](#)”/ [Modes On I IV V Blues](#).

Learning and Practicing a Design

It is time-efficient to practice a number of consecutive instances of a design, going up or down a scale, for example. But when you use the design in improvising, you usually don’t want more than one or two in a row.

GLOBALIZATION DEFINED

In 1996, after studying improvisational music for decades, it occurred to me that there is a common process of applying what an improviser learns. Each significant musical idea should be memorized, categorized, then modified as necessary to reapply to appropriate styles and situations. The categories can be conceived in many different ways.

In a broad view, the main categories are shown below as Pitch, Melody And Harmony, Rhythm And Form, Comping Design and Solo Design. Attributes are listed in a table below each. At the end of this Globalizing Musical Structures And Design section, tables are shown in a timeline fashion, with the timeline labeled at the top, moving forward in time to the right and with the three main categories “comping designs”, “solo designs” and “pitch variables”. The index to the course that follows this section shown another categorization.

When your attention is drawn to a musical idea, become aware of its appropriate variations as shown below. Learn the rules for each genre by learning what musical elements have been used so far. If you are introducing something new to the genre, take care to introduce it to the listeners. People generally like what they know, so new things necessarily need introduction. Be crafty. Bring in something new along with other elements from the genre that the listener knows and likes.

When you perform or arrange a song, be aware of which of all the attributes and designs shown below. The attributes are listed in the tables below each category, such as “Pitch, Melody And Harmony”.

Pitch, Melody and Harmony

key	chord type	fingering
mode or scale	chord progression and cadences	slur type

Rhythm and Form

straight versus swing	phrasing and rhythmic displacement	melodic elaboration & abbreviation
rhythmic words	rhythmic layers	harmonic elaboration & abbreviation

Comping Designs

rhythmic strumming	bass guitar	open position chords
linear arpeggios	left, right and reggae muting	close-voiced triads
thumb bass, index strum	harmonized & walking bass	open-voiced triads
thumb bass, fingers pluck	EDCAGE movable triads	cadences
bass, mid, top: piano style	accents	pedal tone progression
patterned arpeggios	ornamented chords	voice leading (chapter)

Solo Designs

minor pentatonic solo	double stops	open position chords
major pentatonic solos	theme and variation	close-voiced triads
combing six pentatonics	slide guitar	open-voiced triads
combine four heptatonics	fragment patterns	cadences
arpeggios and turnarounds	octaves, optional inner interval	pedal tone progression
two-note harmony	pivot tone	top-voice leading

THEME AND VARIATION BY GLOBALIZING

This is an outline of material that should be studied thoroughly in repertoire. For each attribute and design shown above, you should typically play and study the relative parts of three or more songs as examples.

Changing Comping Design

By using different styles of accompaniment (strumming, finger picking, arpeggiating, etc.), you can greatly vary the feel of the music.

Changing Solo Design

While retaining the core melodic theme, the solo design can be changed between all of the following:

arpeggio fragment patterns (include rhythmic word options)

- arpeggios with pivot tone (include rhythmic word options)
- heptatonic scales and heptatonic subsets with chord tone emphasis (include rhythmic word and slurring options) (after pentatonic for rock and blues)
- heptatonic fragment patterns (include rhythmic word options), (after pentatonic for rock and blues)
- heptatonic scales with pivot tone (include rhythmic word options), (after pentatonic for rock and blues)
- improv themes and schemes, substitution/secondary roots and darkening melodic cells
- blues rock cells
- swing blues cells
- 12 bar blues endings

- ✦ cadences (turnarounds)
- ✦ see the chapter: [“Relating Chord Tones to the Beat”](#)
- ✦ chromaticized arpeggios and the basic lower chromatic embellishment (largely omit for rock and blues) (include rhythmic word and slurring options)
- ✦ pentatonic chord scales and pentatonic subsets of heptatonic scales (include rhythmic word and slurring options)
- ✦ pentatonic fragment patterns (include rhythmic word and slurring options)
- ✦ pentatonic scales with pivot tone (include rhythmic word and slurring options)
- ✦ theme and variation, “duality tones” common to tonic chord and current chord (include rhythmic word and slurring options)
- ✦ 1235, 1345 and scalar V7b9 and bII9 cadences to target chord*, IIm7b5b9 to V7b9 target chord (include rhythmic word and slurring options)(largely omit for rock and blues)
- ✦ double stops (include slurring options)
- ✦ thirds and sixths (include rhythmic word and slurring options)
- ✦ octaves, octaves with inner thirds or inner sixths (include rhythmic word and slurring options)
- ✦ pedal tone progression, including I-IV-I7 and I6n5 to I9nrn3 (include rhythmic word and slurring options)
- ✦ quartal and quintal harmony (omit for typical rock and blues)
- ✦ serial melody: moving structures chromatically; major triad-base structures in serial intervals, including perfect fourths, minor thirds and diminished fifths (include rhythmic word options)(omit for rock and blues)
- ✦ pedal steel bends (primarily country music)
- ✦ slide guitar (primarily blues and blues rock)
- ✦ bebop ornamentation (similar to baroque ornamentation)
- ✦ internal [voice leading \(chapter\)](#)
- ✦ elaborate or abbreviate chord progressions

*target chord: a chord which is preceded by melody or chord progression that leads to it.

Changing Attributes of Pitch, Melody and Harmony

changing key

Convert the theme to numbers in relation to the tone center of the original theme.

changing mode or scale

Change the versions of the numbers in relation to a major scale named after the key, but retain the numbers. For example, in changing from major mode to Mixolydian mode, the seventh is flatted, so any melody in major mode would be converted to Mixolydian by changing any note on the seventh step of the scale named after the key to a flat seven.

changing chord type

Change chord types, usually retaining the same numbers generically, but flatting or sharpening certain notes in relation to the root of the chord. In some cases, the number type of a chord can be varied, such as changing a sixth chord (-3-5-6) to a seventh chord with 1-3-5-b7.

changing chord progression and cadences

Cadences are short chord progressions that punctuate the beginning or ending of a section. Cadences may be changed to involve different sets of chords, or a cadence may be used to elaborate on a single chord. Each chord in a progression could be represented instead with a cadence of three or more chords. Common cadences involve root movement ascending in fourths, such as V-I, II-V-I, VI-II-V-I, or any part of the major scale-tone series of perfect fourths 7-3-6-2-5-1-4.

changing fingering: octave shape

There are five octave shapes, named and designed after the open position major chords E, D, C, A and G. The fingering for most melodies can be played in any of the five octave shapes and that should be explored, since certain attributes of the melody can be more easily and more fluently played in some octave shapes. Each octave shape has different possibilities in slurring and ease of fingering.

changing fingering: forward slash versus back slash

Most melodies and especially pentatonic and jazz arpeggio melodies that have a range of one octave or less have two basic versions. Viewing the guitar fretboard in an upright position (as in a chord diagram, with the head at the top and the neck vertically below), one version occurs in an octave in the shape of a back slash and one in the shape of a forward slash.

changing fingering: index, middle (or ring) or little finger on low octave root or tone center

Most melodies based on a seven tone scale with the range of an octave or less and arpeggios of four or more notes have three fingering possibilities per octave: one with the index finger on the low octave tone center, one with a middle finger (middle or ring) and one with the little finger on the low octave tone center.

changing slur type

Change between hammer-on/pull-off, slide and bend. When two notes are on the same string, they can be slurred with a hammer, pull-off, slide or bend. The same two notes cannot be slurred when fretted in an adjacent fretboard position where they are on different strings. When playing a melody that originated on acoustic guitar on electric guitar instead, hammers, pull-offs and slides can be converted to bends and releases and vice versa.

Changing Attributes of Rhythm and Form

straight versus swing rhythm

Straight rhythm divides the beat into two equal parts. In standard practice, swing rhythm divides the beat into two parts, the first part two thirds of a beat and the second part one third of a beat.

There are subtle variations of swing rhythm where the beat can be divided into a long first part in between one half and three quarters of a beat, giving the second part the remainder. Closer to 50% can be called *light swing*, while closer to 75% can be called *heavy swing*. See [“Rhythmic Words and Comping”/Degrees of Swing](#).

Master musicians can interpret and closely match one another's swing percentage and can even “fade” from one approximate percentage to another!

changing rhythmic words

Rhythmic words are short selections of pulses that divide the beat into two, three, four, six or eight parts. They make up the vocabulary of rhythm from which we build the language of music rhythmically.

Where a theme features a particular rhythmic word, the theme can change to another rhythmic word of the same number of notes.

phrasing and rhythmic displacement

Core melodic tones are chord tones of the current chord. The most important chord tones are the triad tones on which the chord is based. They can functionally be called *target tones*. Generally, you want to

target chord tones on the first beat of the bar. A target chord is a chord which is preceded by melody or chord progression that leads to it.

Phrases can begin on, before or after the first beat of a bar. It is very effective to make patterns of phrases starting in sometimes the same and sometimes different places in relation to the first beat of a bar. Repletion and variation are both good, but don't overuse either. Start a few phrases the same way (*before* the beat, for example), then vary the phrases start by starting at a different location in relation to the beginning of the bar (*on* the first beat of the bar, for example).

To punctuate a phrase, leave a silence or sustain at the end of it, at the end of two bars or four bars.

Vary your phrasing by moving the entire phrase earlier or later in time. It may have originally started on beat three of four beats, and you could change it to start on beat one. It may originally have notes primarily on the beat and, by displacing all of the notes a half beat earlier, you could change it to having the notes primarily before the beat (syncopated). Each of these interpretations has a "sound" which you can conceive to help predict and create phrases.

melodic elaboration and abbreviation

Elaboration. Phrases can be enhanced by adding decorations with slurs, neighboring tones, scale or arpeggio passages, etc., while retaining the core melody.

Abbreviation. A melody is abbreviated by going closer to its essence or omitting repetition and omitting less important chords. It is a form of summarizing.

Sequential variations. Vary a single note or small group of notes with a pattern of variations in mind.

harmonic elaboration and abbreviation

Elaboration. Chord progressions with long durations of each chord can be enhanced with cadences that strengthen the temporary tonality of the main chords.

Abbreviation. When chords are changing very rapidly, it is a chore both to listen to and to play. To make it more palatable to the listener and player, the chord progressions can be summarized. That is a whole art within itself. You need to recognize where groups of two or more chords can largely be treated as a single chord.

rhythmic layers

By using different styles of accompaniment (strumming, finger picking, arpeggiating, etc.), you can greatly vary the feel of the music.

themes in rhythmic layers

As with the tonal aspect of music, rhythm is layered. Each section of music uses rhythmic themes. The simplest thematic rhythms involve the fewest accents during a bar or two, while the more complex layers add more to the simple layers.

For each bar of three or four beats, there are usually two or three main accents. These make up the primary layer. Simultaneously, there are more layers. The next layer adds less important accents. A third layer can add still less important accents (usually at a faster rhythmic level), and/or adds more detail through variation during multiple bars.

compatibility

Musical parts need to be rhythmically compatible. Each added part needs to be discernible to the listener as one of three things:

- ✦ a duplication, elaboration or abbreviation of an existing part
- ✦ an ensemble component which can be combined in a “gear-like” or “dovetail” manner to create an ensemble part
- ✦ a part at a faster or slower rhythmic level (by a simple ratio such as doubling, halving or tripling) that is comprehensible at the same time as the other parts

Chord Diagram and Tablature Quick Start

- **Chord Diagrams**
- **Tablature**

CHORD DIAGRAMS

physical relationship
of a fretboard diagram
to a guitar

symbols for the fingers
of the fretting hand

TABLATURE

This system of notation is a graph of the guitar strings from the perspective of looking down on the guitar as you're playing it. The tablature indicates where each note is fretted. Numbers on the strings indicate frets and are written from left to right in the sequence they are to be played.

Symbols above each tablature number indicate the suggested fretting finger. In reading the tablature, remember that the top string on the tablature is the smallest, first string.

A diagram showing a hand with fretting finger numbers 1-4. The hand is shown from the side, with the thumb (T) and fingers 1-4. The fingers are numbered 1, 2, 3, and 4 from the thumb to the pinky. The thumb is labeled T.

Below the hand is a musical score with a treble clef and a 3/4 time signature. The score consists of a single line of music with notes and rests. Above the notes are chord names: C, G⁷, Am, C, D⁷, and G. Below the notes are fretting finger numbers: 1, 3, 4, 3, 1, 1, 1, 3, 1, 3, 4, 1. Arrows point from the finger numbers to the notes. Below the musical staff is a tablature system with six strings labeled T, A, and B from top to bottom. The tablature shows fret numbers for each string: T (5, 7, 8, 7, 5), A (5, 5, 3, 5, 2, 9, 5), and B (5, 7, 8, 7, 5). Arrows point from the fret numbers to the notes. A large curved arrow points from the first string (smallest) to the sixth string (largest). A large curved arrow points from the first string (smallest) to the sixth string (largest). A large curved arrow points from the first string (smallest) to the sixth string (largest). A large curved arrow points from the first string (smallest) to the sixth string (largest).

Labels and arrows:

- fretting finger numbers
- first string (smallest)
- sixth string (largest)
- fret numbers
- downstrokes and upstrokes downward-pointing arrows mean strum toward the floor

Chord Serial Numbers

The chord serial number system described in “[Chord Archetypes](#)”/The Chord Serial Number System provides a means of identifying any chord without open strings as a unique fingering, expressing it with numbers. The numbers are often shown in this course at the bottom of a chord diagram as you see below. You can ignore these numbers for now, if you like, until to learn their theoretical background.

chord name	Cm	VIII	C7	VIII	Cm7	VIII
chord fingering						
serial number	151b351	10b7350	10b7b350			

Practice and Learning

- **Three Step Song Development**
- **Playing It Right**
- **Practice Plan**

THREE STEP SONG DEVELOPMENT

Build a Song List

finding songs

Make a list of songs you would like to learn. Use your music collection. Go online and try youtube, iTunes or Amazon to audition songs. Try music streaming services like Pandora, Google Music, Apple and Spotify. Talk to friends and family and get suggestions.

order by difficulty

Prioritize your song list so you can work on the easier songs first. You could make multiple lists according to difficulty. On a computer, you could make an editable list of the songs by difficulty.

batching songs

It is very useful to study songs in batches, where the songs share an attribute such as a particular technique, fingering or rhythm. By studying a particular technique such as picking on a number of songs, you will come across many aspects of the technique and be prepared for a wider range of picking styles and challenges.

Three Steps to Learn a Song

step 1. basic version

First listen to the song. Music usually has one, two or three significant parts that require your attention to understand, such as a vocal melody and an interesting bass part. In a band recording, two or more of the instruments, like the bass and drums may be playing versions of the same idea.

Listen to the music multiple times. Focus on the vocal or instrumental melody a few times through the song. Separately, listen with your focus on a second part, like a bass part (or the bass/drum composite).

Find a way to play the chords in as simple manner as necessary to get through the song right away. Simplify the chords. Simplify the rhythm, as much as strumming each chord only once, if necessary. However you do it, find a version you can play right away.

Think the melody while you play, humming it or singing it. If you can find the melody on a guitar or piano, it is very useful to sing it while playing it.

step 2. parts: structure and design

Learn versions of accompaniment and solo parts for the song, copied from recordings, read from books or periodicals.

Break down step two into three stages by playing studies on the chord progression:

stage 1: chords with comping rhythms

stage 2: arpeggios with melodic rhythms

stage 3: scales and melody with harmonic and rhythmic variation

For any key, the fretboard can be segmented into five areas, called octave shapes. Preview the five octave shape areas of the fretboard for the song in stage 1, stage 2 and stage 3, then focus on one octave shape (for the key) first. Choose the octave shape area that is easiest. The [Little Wing Study](#) in “[Pentatonic Scales and Octave Shapes](#)” shows this way of thinking.

In stage 1, you are playing the chord progression in an area of the fretboard, using appropriate [comping rhythms](#). This will build your memory of rhythms and fingerings. The chord fingerings will give you a memory of groups of notes that are part of each chord.

In stage 2, arpeggio fingerings give you a more complete knowledge of the chord tones in a fretboard area and show build a library of melodic rhythms in your mind. See “[Triad Arpeggio Exercises](#)”.

In stage 3, you use scales and arpeggios with harmonic and rhythmic variation to create melody. See “[Theme and Variation](#)”.

The ability to create reasonably sophisticated melodic design on one chord should occur early in your development. This both makes it more fulfilling for you and builds memories of ultimately more useful melody.

Chord progression is commonly abbreviated by the improviser. For example, “II-V” chord changes such as Dm7 to G7 in C major can be played discretely as V7 (G7), playing in the temporary key of the V chord (G7) or in the temporary key of the II chord (Dm7). Melody should generally be strong enough to stand alone on one chord before using it on many. So, if you intend to use a melody that sounds V7 over IIm7 - V7 chord changes, it should sound well just on the V7. It should also be reasonably sensitive to the differences between the IIm7 and the V7, so its part played over the IIm7 sounds good also.

Making the melody viable in each style require the appropriate devices and color.

- ✦ Rock and blues use hammer, pull-off and bend slurring, more minor pentatonic scales (and less major pentatonic scales), triads with some seventh chords and darkening tones (blue notes), some chromatics, syncopation and a few tonal and rhythmic layers.

- Country music uses more major pentatonic scales (and less minor pentatonic), triads, few chromatics, little syncopation and few tonal and rhythmic layers.
- Jazz uses less slurring, more colorful chords like ninths and altered dominant chords, many chromatics, many tonal layers through varying interpretations of the chord progression through elaboration and abbreviation, much syncopation and many rhythmic layers.

step 3. performability

Maintain a lists of songs you like to play and purposed ones like “dream band song list” or “corporate gigs song list”. Delete songs that you won’t play again.

This is where you can test out the elements you have worked out in step 2: parts. You will often take a song back to step 2 and develop it further.

When You Think You Can’t Do It

You probably have a perfectly good brain and since you’re reading this, you’re probably motivated. If you don’t understand or can’t do something, break it down to components. If you don’t understand or can’t do a component, break it down... and so on.

PLAYING IT RIGHT

How Do You Know You're Playing It Right?

Improvising guitarists commonly practice songs with errors in rhythm, notes and with bad technique. They think they are playing correctly and repeat errors over and over. This is bad. This creates strong memories of the errors.

you can't erase an inaccurate memory

Once you have practiced something with errors many times, you have created an inaccurate memory of a musical part. Without brain damage (not recommended), you cannot erase the bad memory. You can only overpower it with a new correct memory. It is also difficult to prevent the incorrect memory from coming to mind when you play the piece in the future.

get auditory feedback

Make sure you have the part you are practicing in mind correctly and that you are playing it correctly. Record yourself playing it and listen to it played back. An excellent way to do this is to make a stereo recording with a correct version on one channel and your rendition on the other.

In recording programs like Garageband, Logic Pro X, Pro Tools, Logic or Digital Performer, you can put a reference recording like the original artist you are coping in one track and record yourself on another track. Then play back the recording and pan the reference recording track to the left and your track to the right. Adjust the volume so you can clearly hear both at the same time.

Figure out how to slow down the original to 50-70% speed and record yourself playing with it at. Make successive recordings at increased speeds. Go up to 110%, so you can easily play at 100%.

If you don't use a recording program, at least play with the reference recording well-balanced with the volume of your guitar, so you can clearly hear both. Start at slower speeds.

Think It Correctly First with "Air Guitar"

Think through the piece first without actually playing guitar. Whenever you can, sing or hum your guitar part, even if only its rhythm in a monotone voice. Then do the same with "air guitar and, upon repetitions, gradually "fade in" touching the guitar until you are actually playing the part.

PRACTICE PLAN

Hopefully, you will see the need for structure in your practice early on, before wasting hundreds of hours of practice by creating bad memories, not building retention and playing redundantly. It is typical that a guitarist will play for years and finally realize that they are not using their practice time efficiently.

Bruce Lee, Jerry Rice, Yo Yo Ma, Tom Cruise, Michael Phelps

Do you think these people randomly practice their art, or do they have a plan? Does Tom Cruise do all his own stunts just banking on the abilities he gained as an athlete in high school and college, or does he have a regimen? Does Yo Yo Ma play whatever he feels like every day, or does he look for areas of improvement and work on them with a plan?

When Eric Clapton recorded with the Bluesbreakers for John Mayall in 1965, he was hired to work eight hours a day on the project. One day, they finished the session after three or four hours. Eric asked his employer, John Mayall what he should do for the rest of the eight hours. John said, “go practice”. Eric did.

In the Clint Eastwood film, *Bird*, Charlie Parker, the phenomenal bebop alto sax player is shown in Kansas City playing at a “cutting” contest (informal improv competition). Charlie had practiced hard for the competition, but apparently not hard enough. In the middle of his solo, the drummer gestured the ultimate insult by removing the mounting screw from his crash cymbal and throwing it onto the stage (meaning Charlie was no good). Of course, Charlie was devastated. In the next scene, Charlie has returned to the club after months of practice and enters another cutting contest. No one has ever heard a soloist so good, like he was from another planet!

Daily Technique

Technical studies need to be practiced daily. Neuromuscular connections require regular practice. Look for both weak and strong points in your performance and use technical studies to strengthen weak points and take advantage of strong ones.

Work At the Edge of Your Ability

Repeat phases or technical exercises in a looped fashion at a level of difficulty and tempo high enough to cause your performance to be slightly flawed. Correct the flaws during repetitions, then increase the level of difficulty and tempo. In this manner, you are increasing your capability by working at the “edge” of your ability.

Acknowledge Fatigue and Take a Break

As you repeat a phrase or section, you will increasingly improve. Then at some point, you will fatigue. Recognize when flaws in your performance are caused by fatigue. Take a break for a minute, or for about half the period of time you were looping the exercise.

Every 15-30 minutes, take a five-minute break. Leave the area. Relax.

Build Strong Memories

Many guitarists play the same thing when they first pick up a guitar every day for many days. Recognize when you have mastered a piece and give yourself the opportunity to experience something new. Continually find new “pick up” songs.

There are a limited number of songs you can retain in your practice over each period of days or weeks.

build phrases into sections

A single-note phase is typically 8-20 notes, usually 2-4 bars. Build your memory of a phrase (two to four bars) by repeating it. When you think you can remember it while working on the next phrase, go onto the next phrase. Then combine the two phrases. If you cannot remember the first phrase, you should have given it more repetitions.

Likewise built longer sections of music and entire songs, memorize smaller regions of music and joining them together to make larger regions.

section or song repetitions and schedule

Each section or song you practice has to be repeated enough times that you can remember it until the next time you will practice it, no more (redundant), no less (memory loss). Without knowing when you will practice it next, you won't know the necessary number of repetitions. This is the purpose of a practice plan: to know how well you have to memorize each item.

separate the rhythm and pitch

The picking and plucking hand typically plays rhythmically. Isolate the rhythm that it plays by muting the strings with the fretting hand or holding a single chord and playing just the picking or plucking part without the changing notes. Even if you don't read music, use standard music notation as a graphic guideline for the rhythm and listen to any available recording.

The fretting hand generally makes the pitch changes. Memorize the sequence of notes by reading the tablature or standard music notation, keeping the picking/plucking hand idle.

Once the rhythmic and pitch components are strong by themselves, multi-task and put them together, playing the full version of the piece.

separate the melodic and accompaniment components

Guitar parts will often combine melody, accompaniment figures (like arpeggios), bass lines and rhythm-keeping parts. Isolate each part and practice it alone, then combine the parts.

Outline Your Practice

Most musicians don't experience using a record of their practice, but they should. The best approach is to use a written record on paper or in a computer to develop the concept of scheduled and monitored practice for a few weeks or months. As you get more proficient at using the plan, you will need less and less of it written down and can eventually do it in your head or with a brief outline.

cycle in all of the elements during a broad period of time

During every few weeks or months, you should incorporate all the necessary components of your musical performance: expression, melody, rhythm, technique, chord progression, fingering and theory.

a practice log

Making a record of your practice can be very productive. Recording your exercise sets to monitor the growth of your muscles in weight training since muscles grow when exercised at the right frequency, some daily, some every two days or more. Likewise, recording your practice can build memories of musical parts to use in performance.

In a diet program, a written record makes sure you are getting all the proper nutrition. In music practice, you should monitor the components (expression, melody, rhythm, etc.) to make sure they are all getting covered.

a sample log

These instructions are given:

“We will modify the log as necessary to represent songs and studies you enjoy and are designed to attain your long term goals in music. To the right of each forward slash, enter a number from 0 to 9 to indicate how intensely and intelligently you worked, where “9” is the highest (best) rating. Ideally, you would attain ratings of “9” early on and consistently. Low ratings can be raised by choosing music you enjoy and by making difficult tasks easier by including more progressive steps.”

- All Natural Notes (C major scale)

- Building Major Scales in the Bass

- **Songs in Every Key**

MEMORIZING THE OPEN POSITION AND TWO BASS STRINGS

Open String Names Repeat at the Twelfth Fret

The open string letter names repeat at the twelfth fret. The names of the three bass open strings are "E", "A" and "D" (6 = E, 5 = A, 4 = D). So, the twelfth fret names on strings 6, 5 and 4 are E, A and D.

Root Locations of Open Position Chords

The root of a chord is the letter name after which it is named (E is the root of an "E" chord). On each of the chord diagrams below, the multiple occurrences of the same root are enclosed in large circles. The large circle on the largest string (on the left of the diagram) is used as a reference. Learn the locations of the largest-string roots for the chords E, F, G, A, B7 and C. The letter name may include a sharp (making it one fret close to the guitar body) or a flat (making it one fret closer to the head of the guitar).

If you have these chords memorized, additionally memorizing the bass note (on the largest string involved in the chord) can provide a method of memorizing the lowest three notes on each string, as diagramed below.

Duplicate Notes at the Fifth Fret

The sixth string, fifth fret is “A”, the same note as the fifth string open. The fifth string, fifth fret is “D”, the same note as the fourth string open. The fourth string, fifth fret is “G”, the same note as the third string open.

One method of tuning, compares the pitch of each string fretted at the fifth fret to the next smaller string open (except the third string, which is not relevant here).

Notes Alphabetically up the Strings

Name the notes alphabetically up the strings, toward the guitar body. In alphabetical order, each note is two frets to the next (with a fret between them), except B to C and E to F which are one fret apart (with no note between them).

Relating to the Piano

The white keys on the piano use letter names with no sharp or flat, called natural notes. The white keys progress in ascending alphabetical order from left to right. The white keys are periodically interrupted with a black key forming a pattern of two black keys beginning to the right of C, then three black keys to the right of F.

Middle C is immediately to the left of the pair of black keys (see the labeled drawing). B is to the left of C, showing that there is no note between B and C. Following the alphabet to the right from C, E is to the right of the pair of black keys. F is to the right of E, showing that there is no note between E and F and that they would be one fret apart on the guitar.

Memorizing the Letter Names on the Two Bass Strings

This will show you how to memorize the natural letter names (with no sharps nor flats) on the two bass strings in three steps. Once you have memorized the natural letter names, it is easy to learn the locations for the sharp and flat versions of each letter.

1. Learn the open position note names.

2. Learn the open position notes A, B, C, D, E, F on the fifth and fourth strings as a group (the first diagram below) to the fifth position on the sixth and fifth strings (the second diagram below). Then add that to the notes you've learned in first position (they are added together on the third diagram below).
3. The notes on the twelfth fret are the same names as the open strings (last diagram below). Two frets below each of the notes at the twelfth fret, the note at the tenth fret is the next lower letter in the alphabet. "E" is on the sixth string twelfth fret and "D", the next lower letter in the alphabet is at the tenth fret. "A" is at the fifth string, twelfth fret and "G" is at the tenth fret.

Now you have memorized all the natural notes on the sixth and fifth strings.

MEMORIZING LETTERS ON ALL STRINGS

"G" Fed "Cba"

Naming the notes alphabetically down the strings (toward the head of the guitar) spells "G" FED "CBA". Think this guy named "G" fed his cat named "CBA". Practice naming the notes on each string, as on the previous page from the twelfth fret down to the open string.

Sharps And Flats

Natural notes have no sharps nor flats. They are A, B, C, D, E, F, G.

The sharp version of any note is one fret toward the guitar body. "A" is on the sixth string, fifth fret. So, A# (A sharp) is on the sixth string, sixth fret.

The flat version of any note is one fret toward the guitar head. "A" is on the sixth string, fifth fret. So, Ab (A flat) is on the sixth string, fourth fret.

Use the rule that any note on the sixth string occurs also five frets lower on the fifth string. The sixth string "C" is on the eighth fret and the fifth string "C" is on the third fret (minus five). Conversely, any note on the fifth string occurs also five frets higher on the sixth string.

Multiple Instances of Each Note

Search for all the occurrences of the note "A" on the diagram above. It is on the sixth string open and twelfth frets, as well as the fifth string seventh. Search for all the occurrences of any other note and you'll discover that every note occurs in two or three places on the sixth and fifth strings.

Note Names at the Fifth and Twelfth Frets

To locate chords anywhere on the fretboard, you need to know the location of all the letter names above on the sixth, fifth and fourth strings (Notes By Letter Names On One String). That's a lot to memorize. Get started by memorizing the note names at the fifth and twelfth frets.

You probably know the names of the open strings (not fretted). The series of letters in the sentence "Eat A Darn Good Breakfast Early" (E-A-D-G-B-E) represents the open string note names from the largest (sixth) to the smallest (first) strings. The note names at the twelfth fret are the same as the open strings. That part is easy!

At the fifth fret on the three largest strings (sixth, fifth and fourth), the note name is the same as the next smaller string open:

The Other Notes

Using the fifth and twelfth frets as points of reference, you can figure out the location of all the other letter-named notes by moving alphabetically up and down a string from a known note. Beyond that, sharpened versions of notes are one fret toward the guitar body (from the un-sharped or *natural* versions) and flatted versions of notes are one fret toward the head of the guitar (from the un-flatted or *natural* versions).

Notes by Letter Name on One String

In alphabetical order, each note is two frets apart from the next, except “B” to “C” and “E” to “F” are one fret apart. As you can see by the tablature below, this is true on any string. Notice that where the alphabet starts over with “G” to “A”, it is also two frets.

sixth string natural notes

Musical notation for the sixth string natural notes in 4/4 time. The notes are E, F, G, A, B, C, D, E, F, G, A, G, F, E, D, C, B, A, G, F, E. The tablature below shows the fret numbers for each note: 0, 1, 3, 5, 7, 8, 10, 12, 13, 15, 17, 15, 13, 12, 10, 8, 7, 5, 3, 1, 0.

Building Major Scales in the Bass

The C major scale uses all natural notes, no sharps nor flats. Fingerings for it are shown below, each ranging eight notes of the scale. Most of them won't start and end on the note "C", so they may not sound like a major scale to you. They are very useful in playing and constructing melodies and musical parts and to learn the names of the notes. Be sure to use the roman numerals to get oriented to the fret numbers where each scale fingering occurs.

READING FRETBOARD DIAGRAMS

fretboard diagrams for chords, arpeggios and scales

Fretboard diagrams are more commonly used for chords, but often used for scales. Chords sound only one note on each string at a time. When you see more than one note on a string in a fretboard diagram, it is not a chord.

Arpeggios play the notes of chords, one at a time. They may be played as a held chord, but are more often fingered like scales, one note at a time.

Arpeggios have one or two notes per string, rarely three on a string. Scales have two, three or more notes on each string

Anatomy of a Fretboard Diagram

physical relationship of a fretboard diagram to a guitar

**symbols for the fingers
of the fretting hand**

Fifth Position

Ninth Position

Chord Names and Roman Numerals

roots and tone centers

At the upper left of a grid diagram, the chord, arpeggio or scale is named with a letter. On the diagram, I usually enclose the notes that name the chord, arpeggio or scale in a large circle. Letter names may have a flat or sharp immediately after the letter, like “Bb” (B flat) or “F#” (F sharp).

A plain letter name, such as “B” or Bb (B flat) indicates a major chord. A small “m” after a letter name indicates a minor chord. “Bb” means “B flat major”, while “Bbm” means “B flat minor”. A few more common chord symbol abbreviations are shown later in this section.

A chord root is the note after which a chord is named (“D” is the root of a D major chord). Each arpeggio has a chord root also, since it is a chord played one note at a time (“D” is the root of a D major arpeggio).

A tone center is the note after which a scale is named (“C” is the tone center of a C Lydian scale).

roman numerals

A roman numeral above the top right of the diagram indicates the number of the top fret on the diagram. Roman numerals are used elsewhere in text about music to number the steps of a major scale, especially in regard to which numbered step (from I to VII) a chord is built on.

Movable Diagrams

Movable diagrams have no roman numeral on their upper right and therefore have no specified top fret number. They may be placed anywhere on the fretboard according to their chord root(s) or tone center(s). If notes on a diagram are indicated by dots, a circled or enlarged dot indicates the chord root or tone center.

The numbers 1, 2, 3 and 4 within diagrams indicate left hand fingers. The finger number on the chord root or tone center may be circled.

When numbers higher than 4 are used in a diagram, all of the numbers indicate scale, chord or arpeggio tones.

Chord Tones by Number

Most of my chord diagrams show the numbered tone of a major scale in the same key as the chord for each note. Below each string (the vertical lines) on the diagram a number is shown for each note. "b3" would be a flatted third in the key of the chord. So, for a C minor chord, which has a flatted third, "b3" indicates a flatted third, , which is "Eb" (E flat) in the key of C.

Fretboard Diagram Reading Procedure

You read the previous pages and may be anxious to play songs. How complicated can it be? True, chord diagrams are a simple graphic representation of fingers on the fretboard, but be careful not to make an error in reading them. It is quite common that someone new to reading chord diagrams “thinks” they have read a diagram correctly, and doesn’t find out until much later (if at all) that they have made an error.

take your time and read chord diagrams right the first time.

- Thoroughly review *Fretboard Diagrams For Chords, Arpeggios and Scales* and *Anatomy Of A Fretboard Diagram* at the beginning of this section.
- Read the header (Gm III) with the chord name and roman numeral for position.
- Read chord diagrams from left to right *slowly*, one string at a time from the sixth (largest) string to the first string (smallest).
- Allow two to three seconds to read each string, until you experience no errors in reading, then read faster.
- Recognize when strings are “skipped” or frets are “empty” (see below).
- Recognize when fingering patterns in scales repeat on adjacent strings and when they change on adjacent strings.

“skipped” strings

When a string is played open or muted in-between fretted notes, it can be called a “skipped” string. Each chord or scale below each has one or more skipped strings.

skipped third string

skipped (open) second string

skipped (muted) second string

skipped third and fourth strings

skipped fourth string

“empty” frets

Where a fret in-between your fingers on a chord or scale is not fretted, it can be called an “empty” fret. Each chord or scale below each has one or more “empty” frets.

the barre

The barre is a group of notes all on the same fret of two or more strings. It is fingered with a straight portion of one finger. It uses the classical wrist position, with the base of the fingers parallel to the fretboard. Fret the barre with the harder edge of your finger when you can. Avoid the creases opposite your knuckles (by adjusting the positing of your finger vertically), since they can mute notes.

In the “F” chord shown below with finger numbers, it is left up to the reader to interpret that the first finger is placed across all six strings (as shown by the diagram to it’s right).

guitarists playing left-handed guitars

For the left-handed guitarist, all diagrams should be imagined in “mirror image”. Guitarists playing left-handed guitars should interpret references to the right hand as left and vice-versa.

fingering patterns for scales

Recognize when fingering patterns for scales repeat and when they change.

fingers "1, 4" on strings 6, 2 and 1

fingers "1, 3" on strings 4, 3 and 2

fingers "1, 2, 4" on strings 6, 5 and 1

fingers "1, 3, 4" on strings 4 and 3

A whole step is a "two fret" interval, spanning three consecutive frets, where the middle fret is "empty". Strings 5, 4 and 3 in the diagram below use a whole step interval.

A "double whole step" refers to part of a scale fingering uses two consecutive whole steps on the same string. They can be fingered with fingers "1, 2, 4" or "1, 3, 4". Players with a wider span between their ring and little fingers tend to prefer the "1, 3, 4" fingering. The fingerings below have double whole steps.

double whole step
on strings 6,5 and 1
with fingers 1, 2 and 4

double whole step
on strings 5 and 4
with fingers 1, 2 and 4

double whole step
on strings 5 and 4
with fingers 1, 2 and 4

Columns are vertical. Rows are diagonal. The first column and the second row below each have a straight line drawn through them. The second column and the fourth row each have a wavy line drawn through them. The third column has a dotted line drawn through it.

See the chapter [“Chord-Naming Conventions”](#).

READING TABLATURE

This system of notation is a graph of the guitar strings from the perspective of looking down on the guitar as you're playing it. The tablature indicates where each note is fretted. Numbers on the strings indicate frets and are written from left to right in the sequence they are to be played.

symbols for fingers

The symbols that indicate the fingers of each hand are shown below. They are typically placed below the standard music notation, between the music notation and the tablature. The plucking hand finger symbols are abbreviations for Spanish words, such as *anular* as in annual ring around the sun.

fretting hand

T = thumb

1 = index finger

2 = middle finger

3 = ring finger

4 = little finger

plucking hand

p = thumb (pulgar)

i = index finger (indice)

m = middle finger (medio)

a = ring finger (anular)

c = little finger (chiquita)

symbols above the tablature

Symbols above each tablature number indicate the suggested fretting finger. In reading the tablature, remember that the top string on the tablature is the smallest, first string.

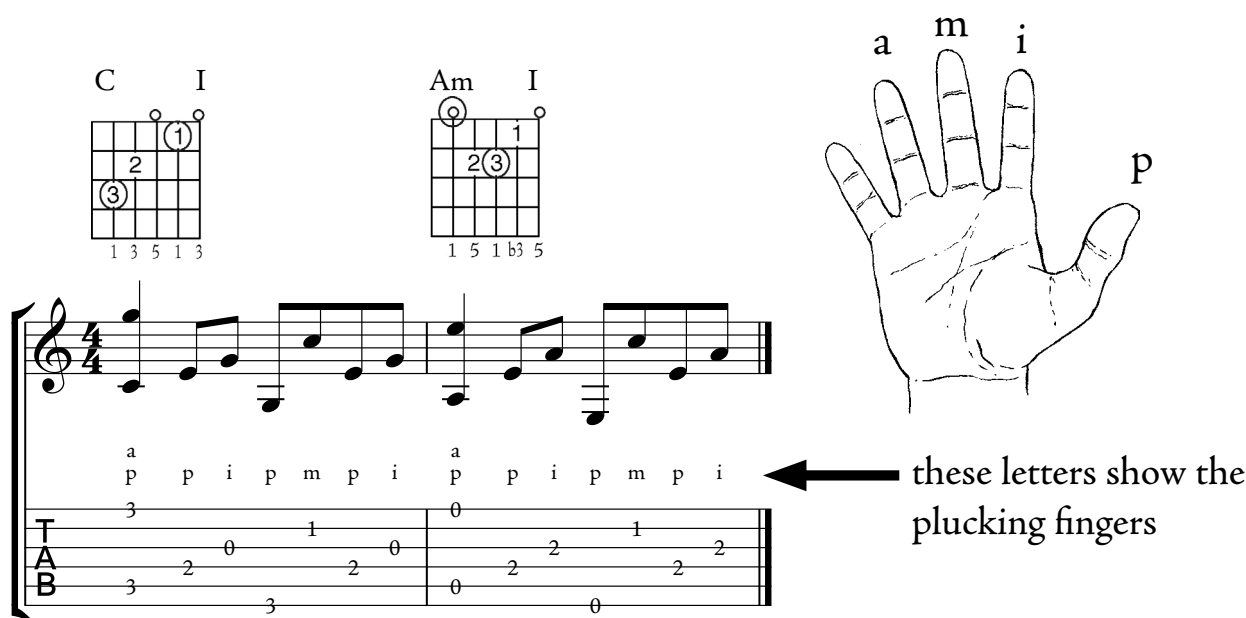

chord diagrams and plucking fingers

The fretboard chord diagrams shown above the music notation in the diagram below are aids in reading the tablature. Instruction on reading these diagrams is in the earlier section [Reading Fretboard Diagrams](#).

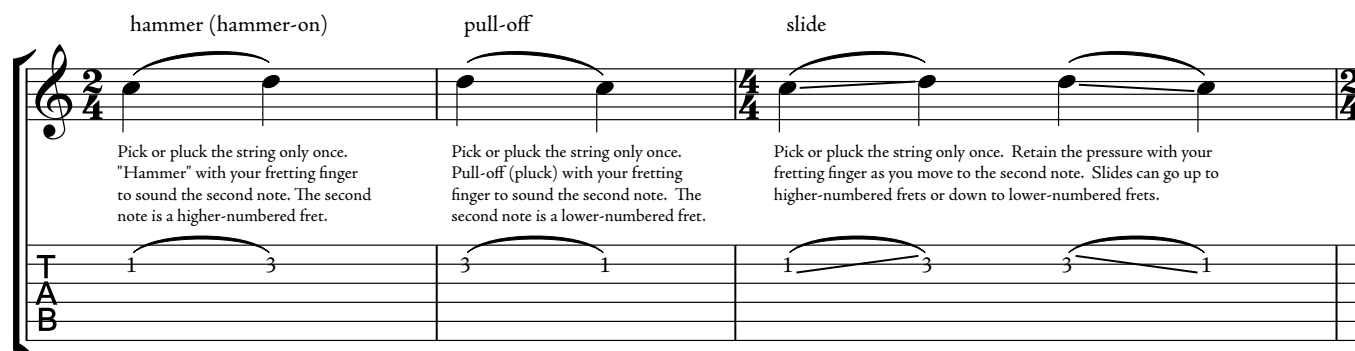

Fretboard chord diagrams are used in this course where the fretting hand mainly retains a particular chord fingering. You should still read the guitar part in the tablature, since it shows the exact sequence of notes.

Right hand symbols are shown above or below notes in the standard music notation. The right hand finger symbols are “p” (pulgar = thumb in Spanish), “i” (indice = index finger in Spanish), “m” (medio = middle finger in Spanish) and “a” (anular = ring finger in Spanish).

The diagram illustrates the relationship between fretboard chord diagrams, right hand finger symbols, and musical notation. At the top left, two fretboard diagrams are shown: a C major chord (frets 1, 3, 5, 1, 3) and an Am major chord (frets 1, 5, 1, b3, 5). To the right is a diagram of a right hand with finger symbols: 'a' for the ring finger, 'm' for the middle finger, 'i' for the index finger, and 'p' for the thumb. Below these is a musical score in 4/4 time. The score includes a treble clef staff with notes, a bass clef staff with tablature (T, A, B strings), and a series of plucking finger symbols (a, p, p, i, p, m, p, i, a, p, p, i, p, m, p, i) written below the notes. An arrow points from the text 'these letters show the plucking fingers' to the plucking symbols.

Special Tablature Symbols

The diagram illustrates three special tablature symbols: hammer (hammer-on), pull-off, and slide. Each technique is shown with a musical staff and a corresponding tablature staff. The hammer-on technique involves picking the first note and then hammering the fretting finger onto the second note. The pull-off technique involves picking the first note and then pulling the fretting finger off the string to sound the second note. The slide technique involves picking the first note and then sliding the fretting finger to the second note. The tablature shows the fret numbers for each note and the specific techniques used to play them.

hammer (hammer-on)
Pick or pluck the string only once. "Hammer" with your fretting finger to sound the second note. The second note is a higher-numbered fret.

pull-off
Pick or pluck the string only once. Pull-off (pluck) with your fretting finger to sound the second note. The second note is a lower-numbered fret.

slide
Pick or pluck the string only once. Retain the pressure with your fretting finger as you move to the second note. Slides can go up to higher-numbered frets or down to lower-numbered frets.

bend 1/2 step (one fret) bend a whole step (two frets) bend a 1 1/2 steps (3 frets) bend a 2 steps (4 frets)

Pick or pluck the string only once. Retain the pressure with your fretting finger as bend the string toward the middle of the fretboard enough to change to the same pitch as the note one fret toward the guitar body.

Change to the same pitch as the note two frets toward the guitar body.

Change to the same pitch as the note three frets toward the guitar body.

Change to the same pitch as the note four frets toward the guitar body.

Play the note on the smaller string unbent while simultaneously playing and bending the note on the larger string to the same pitch.

The Staff and Note Parts

the staff

The staff is a group of five horizontal lines on which music is written. The plural is usually “staves”, but may be “stuffs”. Bar lines (above) are vertical lines written across the staff to divide it into groups of beats. Each group of beats is called a bar. Time signatures indicate the number of beats in the bars that follow it, as well as the relative beat value of each note.

Ledger lines are short lines placed above or below the staff to add to its range.

note parts

The parts of notes are the head, stem, flag, beam and dot. The head of a note is an oval. It is centered vertically on or between the lines of the staff. The whole note's only part is its head.

The stem of a note is a vertical line connected to the head. It connects to the left if it goes down from the head and to the right if it goes up. Stems on note heads above the middle of the staff are usually written down. Stems on heads below the middle of the staff are usually written up. Stems on the center line of the staff can be written up or down.

A flag or a beam halves the time value of a note. Each additional flag or beam cuts the value in half again. A dot multiplies the value of a note by one and a half. Two dots multiply the value of a note by one and three quarters.

Learn the time values implied by all these symbols in [“Rhythmic Words and Comping”/Times Signatures](#) and [Rhythmic Reading](#).

up and down stems

When two voices (two instrument or voice parts) are written on the same staff, the upper part is usually written with all stems up and the lower part with all stems down:

treble and bass clefs

A clef is a sign placed on the staff at the beginning of a piece of music to indicate the placement of the letters. The letters used in music include “A, B, C, D, E, F, and G.”

The treble clef or “G” clef assigns the letter “G” to the second line from the bottom of the staff. Guitar music is written on the treble clef, although *the guitar sounds one octave lower than written*. Notes on the treble clef are completely above those on the bass clef in pitch.

The bass clef or “F” clef assigns the letter “F” to the second line from the top of the staff. Notes on the bass clef are completely below those on the treble clef in pitch.

middle C

Middle C is the C nearest the middle of the piano keyboard (full 88 key version). It is the “dividing line” between the treble and bass clefs. It is on the first ledger line below a staff using the treble clef and the first ledger line above a staff using the bass clef.

The treble and bass clefs are conceptually part of the great staff, which has eleven lines. The top five lines are extracted to make the treble clef, and the bottom five lines are extracted to make the the bass clef. The center line of the great staff is middle C.

The notes on the staves are in alphabetical order:

guitar transposes one octave

Guitar is usually written on the treble clef, transposed down one octave.

...actually sound here:

octave symbols

Memorizing Note Names

See also “[Memorizing Fretboard Letter Names](#)”.

The letter names on the treble clef are easy to memorize with the use of a few associations. From bottom to top, the notes on the lines of the staff are the first letters of the words in this sentence: Every Good Boy Does Fine. From bottom to top, the notes on the spaces of the staff spell the word “face.”

The notes on the lines (including ledger lines) are in an alternate alphabetical pattern: A, C, E, G, B, D, F, A, C, etc. Likewise, the notes on the spaces are in the same alternate alphabetical pattern: A, C, E, G, B, D, F, A, C, etc. Memorize the alternate alphabetical cycle (thirds) shown below.

note names in reverse order (“gfedcba” or “gee-fed-cee-bah”)

Most of us were only taught to think the alphabet forward, not forward and backward. In music, whenever notes descend (go down) a seven tone scale such as the major scale, you will need to think the letters backward. As a memory device, think of someone named “G” who “FED” his cat named “CBA” (pronounced: “cee-bah”). Of course, the notes continue down the scale after “A”, forming the cycle “G-F-E-D-C-B-A-G-F-E-D”, etc.” Thirds in reverse order spell “F-D-B-G-E-C-A”.

memorizing first position note names on the guitar

- ✦ The open strings, from sixth to first string are Eat A Darn Good Breakfast Early (E A D G B E).
- ✦ E to F is one fret. B to C is one fret.
- ✦ A-B, C-D, D-E, F-G and G-A are each two frets apart.
- ✦ There are three each of the notes E, F and G.
- ✦ The note name at any fret on the sixth string is the same at that fret on the first string.
- ✦ Octaves “skip” one or two strings, depending on their angle. Octaves are notes which have the same name, but are eight letter names apart (counting the starting and ending notes). See the diagrams at the left below.
- ✦ Octaves of A, B, D, E and G each include an open string.
- ✦ The fingering pattern on strings 1, 2 and 6 is open, 1, 3.
- ✦ The fingering pattern on strings 5 and 4 is open, 2, 3.
- ✦ The fingering pattern on string 3 is open, 2.
- ✦ Memorize the locations of the notes after which each chord is named below
- ✦

The top fret on all of the diagrams below is the first fret. The tiny circles above the chord diagrams indicate open strings (not fretted). Notes enclosed in the large circles below enclose the letter names after which the chord is named. In each diagram, the notes enclosed in the large circles are octaves (eight letter names apart, inclusively). Letter names for notes above the diagrams indicate open strings.

TIME SIGNATURES

Music is divided into regular units called bars. In common time, there are four beats to a bar. The top number on a time signature tells you how many notes there are per bar. The bottom number gives you the value in beats for the whole note. The half note gets half as much. The quarter note gets one quarter as much, and so on, in a system of halving. See the halving chart on the next page.

The image displays three musical staves, each with a time signature and a sequence of notes and rests. Below each staff is a counting pattern.

- Staff 1 (4/4):** The time signature is 4/4. The notes are: a whole note (bar 1), two half notes (bar 2), four quarter notes (bar 3), and a sequence of eighth notes (bar 4). The counting pattern is: 1 2 3 4, 1 2 3 4, 1 2 3 4, 1 + 2 + 3 + 4 +, 1 e + a 2 e + a 3 e + a 4 e + a.
- Staff 2 (3/4):** The time signature is 3/4. The notes are: a half note and a quarter note (bar 1), two half notes (bar 2), three quarter notes (bar 3), and a sequence of eighth notes (bar 4). The counting pattern is: 1 2 3, 1 2 3, 1 + 2 + 3 +, 1 e + a 2 e + a 3 e + a.
- Staff 3 (6/8):** The time signature is 6/8. The notes are: a half note and a quarter note (bar 1), two half notes (bar 2), three quarter notes (bar 3), and a sequence of eighth notes (bar 4). The counting pattern is: 1 2 3 4 5 6, 1 2 3 4 5 6, 1 2 3 4 5 6, 1 + 2 + 3 + 4 + 5 + 6 +.

RHYTHMIC READING

The three math operations in rhythm notation are halving, dotting and triplets.

Halving

<i>name</i>	<i>single</i>	<i>beamed</i>	<i>rest</i>	<i>calculation</i>	<i>x/4 value</i>	<i>x/8 value</i>	<i>x/2 value</i>
whole				all of whole note	4 beats	8 beats	2 beats
half				$\frac{1}{2}$ of whole note	2 beats	4 beats	1 beat
quarter				$\frac{1}{4}$ of whole note	1 beat	2 beats	$\frac{1}{2}$ beat
eighth	 or 			$\frac{1}{8}$ of whole note	$\frac{1}{2}$ beat	1 beat	$\frac{1}{4}$ beat
sixteenth	 or 			$\frac{1}{16}$ of whole note	$\frac{1}{4}$ beat	$\frac{1}{2}$ beat	$\frac{1}{8}$ beat
thirty-second	 or 			$\frac{1}{32}$ of whole note	$\frac{1}{8}$ beat	$\frac{1}{4}$ beat	$\frac{1}{16}$ beat

The complete name in each case ends with the word “note”, such as whole note and half note. Two or more notes can be beamed.

Dotting

Dotted notes receive one and one half their value. Think of it as adding half of the value of the note for the dot. All calculations are 1.5 times the whole note.

<i>name</i>	<i>note</i>	<i>rest</i>	<i>x/4 value</i>	<i>x/8 value</i>	<i>x/2 value</i>
dotted whole			6 beats	12 beats	3 beats
dotted half			3 beats	6 beats	$1\frac{1}{2}$ beats
dotted quarter			$1\frac{1}{2}$ beats	3 beats	$\frac{3}{4}$ beat
dotted eighth	 or 		$\frac{3}{4}$ beat	$1\frac{1}{2}$ beats	$\frac{3}{8}$ beat
dotted sixteenth	 or 		$\frac{3}{8}$ beat	$\frac{3}{4}$ beat	$\frac{3}{16}$ beat

Dotted notes can be beamed and secondary beams can be attached to single notes:  .

Double-dotted notes. When notes are followed by two dots, the second dot adds half as much as the first dot added. This comes out to one and three quarters times the note ($\times 1.75$).

name	note	rest	$\times/4$ value	$\times/8$ value	$\times/2$ value
double dotted half			$3 \frac{1}{2}$ beats	7 beats	$1 \frac{3}{4}$ beats
double dotted quarter			$1 \frac{3}{4}$ beats	$3 \frac{1}{2}$ beats	$\frac{7}{8}$ beat

Tuplets

Pulses occur at different rhythmic levels. They occur at the beat level and in subdivisions, where the beat is divided into equal parts. The subdivisions, such as half beats, can be further subdivided, such as half beats into quarter beats.

Typically, notes of equal value in subdivisions of the beat are joined by beams in groups of two, three or four notes. The most common tuplet is the eighth note triplet, where three notes are played in the time of two:

In $\frac{4}{4}$ or $\frac{3}{4}$ time, there are two eighth notes or four sixteenth notes per beat:

compound time signatures

In compound time signatures, such as $\frac{6}{8}$ or $\frac{12}{8}$ time, there is one eighth notes per beat, but they are grouped in twos or threes. In $\frac{6}{8}$ or $\frac{12}{8}$ time, eighth notes are usually joined by beams in groups of three:

changing subdivision

Where a portion of a measure can be subdivided into a number of notes of equal value, tuplets change the subdivision with a bracket or beam and a number indicating a different number of notes in the portion. The number indicates a new number of notes that equally divide the specified portion of the measure.

duplets

This duplet in $\frac{6}{8}$ or $\frac{12}{8}$ time would indicate two notes played in the time of three:

quadruplets

These quadruplets in $\frac{6}{8}$ or $\frac{12}{8}$ time would indicate four notes played in the time of three:

clarified tuplets

A modern convention for tuplets can clarify the new and old number of notes in the subdivision. Since this is rarely used, the notation could include numbers separated by a colon to indicate four notes in the time of three:

irregular durations within a subdivision

A number of notes in a tuplet may be represented by a single note, such as using a quarter note to represent two eighth notes. Notice that a bracket must be used for the irregular durations, but is optional for the complete tuplets (such as the triplets with three eighth notes).

tuplet limits

When the number of notes in the tuplet exceeds twice the number of equal-valued notes in the subdivision, notes of half the value should be used.

Five notes within a beat in $\frac{4}{4}$ would not be indicated with eighth notes, since five is over twice as many as the two eighth notes that would normally constitute one beat:

They would instead be indicated with sixteenth notes:

They could also be clarified by numbers separated with a colon:

Ties

Ties add notes of any time value together. They can be applied to any two consecutive notes of the same pitch.

BEGINNING TO READ MUSIC NOTATION

Read the diagram at the left and play the notes from “G” on the third string to “G” on the first string. Then, play the notes from “G” to “G” again as you read the last eight notes on the staff below. Think the letter names as you focus on the notes on the staff.

read songs

Ode To Joy

House Of The Rising Sun

The musical notation is written in 3/4 time on a single staff. It consists of four lines of music, each starting with a measure number and a guitar chord. The notes are as follows:

- Line 1 (Measures 1-4):** Measure 1: A4 (quarter), G4 (quarter), F4 (quarter). Measure 2: E4 (quarter), D4 (quarter), C4 (half). Measure 3: B3 (quarter), A3 (quarter), G3 (half). Measure 4: F3 (quarter), E3 (quarter), D3 (half). Chords: Am, C, D, F.
- Line 2 (Measures 5-8):** Measure 5: C4 (quarter), B3 (quarter), A3 (half). Measure 6: G3 (quarter), F3 (quarter), E3 (half). Measure 7: D3 (quarter), C3 (quarter), B2 (half). Measure 8: A2 (quarter), G2 (quarter), F2 (half). Chords: Am, C, E. A slur covers measures 7 and 8.
- Line 3 (Measures 9-12):** Measure 9: C4 (quarter), B3 (quarter), A3 (half). Measure 10: G3 (quarter), F3 (quarter), E3 (half). Measure 11: D3 (quarter), C3 (quarter), B2 (half). Measure 12: A2 (quarter), G2 (quarter), F2 (half). Chords: Am, C, D, F. A slur covers measures 11 and 12.
- Line 4 (Measures 13-16):** Measure 13: C4 (quarter), B3 (quarter), A3 (half). Measure 14: G3 (quarter), F3 (quarter), E3 (half). Measure 15: D3 (quarter), C3 (quarter), B2 (half). Measure 16: A2 (quarter), G2 (quarter), F2 (half). Chords: Am, E, Am. A slur covers measures 15 and 16.

A fretting instruction is located at the end of the first line: "A", first string fifth fret.

REPEATS, SEGNO, ENDINGS & CODA, ETC.

Beat or Bar Repeats

bar lines

The vertical lines (|) in the examples below separate the music into bars. In Imagine intro, the first bar contains “C” and “CΔ” (CΔ means C major 7). The second bar contains “F”.

Imagine intro

a forward slash indicates each repeated beat

Each forward slash (/) in the Imagine intro chord progression notation above indicates the chord should be played another beat. In bar 1, the first beat is indicated by the chord name (“C”). Beats two and three of bar 1 should each play the C chord another beat. Beat four of bar 1 is “CΔ7” (C major 7).

And Your Bird Can Sing intro

a forward slash with dots indicates a repeated bar

The forward slash symbol with dots on the lower left and lower right (⋈) in the And Your Bird Can Sing intro chord progression notation above indicates the chord should be played for another bar.

the double forward slash with dots directs you to repeat the previous two bars

The double forward slash with dots that draw across the barline between bars 3 and 4 of the And Your Bird Can Sing intro indicates that the “E” chord should be played for two more bars (in bars 3 and 4).

Left and Right Repeat Signs

Eleanor Rigby *without* begin repeat

Eleanor Rigby *with* begin repeat

the right repeat (end repeat)

The right repeat sign (||) indicates that you repeat from the beginning if there is no left repeat (||:), as shown in Eleanor Rigby *without* begin repeat.

the left repeat (start repeat)

As shown below in Imagine, the left repeat sign (||:) indicates that once you get to the right repeat sign (||), you would play the content again from the left repeat to the right repeat.

Imagine with left and right repeat for bars 5-12

in chord symbol notation

As in standard music notation, repeat signs indicate a section is played twice. Chord names can be in letter name version or roman numerals, making no difference in the effect of the repeats.

The symbol “||:” is the left repeat shown at the beginning of the repeated section. The symbol “:||” is shown at the end of the repeated section. See the example below, where four bars are to be played twice.

||: I | IV | bVII6 | I :||

When more repetitions are needed, it can be indicated in text. This examples tells us to play the four bars four times.

4X: ||: C | F | Bb6 | C :||

Double Bar Lines

thin double barlines

A thin pair of barlines (||) indicates the end and/or beginning of a section. It has no effect on the duration of notes in performance.

thin then thick pair of barlines

A thin then thick pair of barlines (|||) indicates the end of a song.

Multiple Endings

Chains

The notation for 'Chains' is as follows:

Row 1: $\text{in } \frac{4}{4} \text{ B}^b$ | /: | /: | /: AS^b | /: | /: | /: |

Row 2: | E_9^b | /: | B^b | /: | F_9 | E_9^b | B^b | $\text{F} \text{ } \left. \vphantom{\text{F}} \right\} \text{1.}$ |

Row 3: | B_7^b | E_9^b | /: | B^b | B_7^b | E_9^b | /: | F |

Row 4: | /: | B_7^b | E_9^b | /: | B^b | B_7^b | E_9^b | /: |

Row 5: | F | /: ||

Below Row 5: D.S. al Coda

Row 6: B_7^b | B^b | /: | /: | /: | E^b |

Row 7: | E^b | B^b ||

numbered endings

In Chains, shown above, there are three numbered endings. Once you get to the first ending with “1.” enclosed in an angle bracket, you play up the repeat sign (/:), then go back to the left repeat sign (||:) and continue up to (but not including) the first ending. Skip the first ending and go on to the second ending with “2.” enclosed in an angle bracket. If there is another right repeat sign (/:) after the “2.”, as there is in *Chains* above, you should go back *again* to the left repeat then go back to the left repeat sign (||:) and continue up to (but not including) the first ending again. Now go to the third ending (the second bar in the fourth row in *Chains*). If there weren’t further instructions, you would go on to the end. But there *are* further instructions. Read about D.S. al Coda below.

Endings with Special Instructions

⌘ (Segno)

Segno is a sign indicating the location you go to, earlier in the song, to then proceed to the end or coda as instructed. Details below.

D.S. (dal segno)

If only “D.S.” is shown, you should go to the location of the “⌘” (segno) and proceed from there, following any further instructions that may come up.

⌘ (Coda)

The ⌘ (coda) symbol shows where you depart from the main body of music and go on to the ending section which bears another ⌘ (coda) symbol and/or the word “Coda”. You might see it any of the three ways (⌘, Coda or both). See D.S. al Coda below.

D.S. al coda (dal segno al coda)

Where “D.S. al Coda” is shown, like in the fourth row of *Chains* at the end of the third ending (3.), you should go to the location of the “⌘” (segno) and proceed from there to the ending section which bears another ⌘ (coda) symbol and/or the word “Coda”. You might see it any of the three ways (⌘, Coda or both).

D.C. (Da Capo)

D.C. means go back to the beginning. “Capo” means “head” as in the “top” or beginning.

Fine

“Fine” marks the end.

D.S. al fine (dal segno al fine)

Where “D.S. al Fine” is shown, you should go to the location of the “” (segno) and proceed from there to the ending, where the word “fine” should appear.

D.C. al fine (da capo al fine)

Go back to the beginning and proceed to the end at “fine”.

(Fermata)

Sustain the note or chord shown under this symbol approximate double the duration or until cued by the bandleader.

Play x Times Versus Repeat X Times

When “play 3 times” is written in the last bar of a repeated section (with left and right repeats), play the section three times. It can be written simply “3x”, as commonly done in iReal Pro.

When “repeat 3 times” is written in the last bar of a repeated section (with left and right repeats), play the section *four* times (once for the initial notation, then repeat three times). Avoid this notation, it can be misunderstood.

- **The Intervals Necessary to Construct a Major Chord**

NUMBER AND LETTER CYCLES

Half and Whole Steps

the alphabetical sequence of notes

A half step is one fret, such as fret three to fret four. A whole step is two frets, such as fret three to fret five. European and American music is based on the major scale. The major scale is the common reference for scales, chords and melodies. Letters occur in alphabetical order with two frets between each letter, including G-A where the alphabet starts over. Two exceptions: E to F and B to C are one fret. See [Intervals and Formulas](#).

Solely on the second string, ascend (move toward the guitar body) the alphabetical sequence C-D-E-F-G-A-B-C, starting on the second first fret "C". That is the C major scale.

1	3	5	6	8	10	12	13	12	10	8	6	5	3	1
---	---	---	---	---	----	----	----	----	----	---	---	---	---	---

Solely on the second string, play the alphabetical sequence D-E-F-G-A-B-C-D, starting on the second string third fret, "D". That is the D Dorian mode, a mode of the C major scale. See [Modes](#).

3	5	6	8	10	12	13	15	13	12	10	8	6	5	3
---	---	---	---	----	----	----	----	----	----	----	---	---	---	---

the major scale sequence of notes

With the major scale, numbers occur in numerical order with two frets between each number, with two exceptions: 3 to 4 and 7 to 1 are one fret. The next numbered tone above 7 is "1", where "1" repeats an octave higher. A typical example of the major scale would be to ascend (toward the guitar body) from any note (starting on one of the first four frets fits well on the guitar) 1-2-3-4-5-6-7-1, then descend 7-6-5-4-3-2-1, See [Formulas: Numbering the Major Scale Tones](#), [Recognizing Half Steps in the Major Scale](#) and [Play the Major Scale on One String](#).

Solely on the second string, thinking in “C”, where “C” is “1” play the numerical sequence 1-2-3-4-5-6-7-1, starting on the second string first fret “C” (1), then descend 7-6-5-4-3-2-1. Be sure to use a one fret interval between 3-4 and 7-1. That is the C major scale in numbers.

The musical notation shows a sequence of notes on a single string, with fret numbers indicated above the notes. The sequence is as follows:

Measure	Fret	Tab
1	1	1
2	2	3
3	3	5
4	4	6
5	5	8
6	6	10
7	7	12
8	1	13
9	7	12
10	6	10
11	5	8
12	4	6
13	3	5
14	2	3
15	1	1

Solely on the second string, thinking in “D”, where “D” is “1” play the numerical sequence 1-2-3-4-5-6-7-1, starting on the second string third fret “D” (1), then descend 7-6-5-4-3-2-1. Don’t play the same C major scale, a couple of these notes are different. Be sure to use a one fret interval between 3-4 and 7-1. That is the D major scale in numbers.

Pitch Cycles In Music

The number and letter cycles shown in this section are essential to think and converse all pitch structures in music: chords, chord progression, scales and melody. Memorize the three cycles: stepwise, thirds and fourths. They are the order in which chord roots (notes that name chords) progress.

Thirds are the primary structure of building chords. “1-3-5-7” builds a four-note chord on “1”. “2-4-6-1” builds a four-note chord on “2”. Study all possible pairs of scale-tone triads, looking for unique pairs and duplicate pairs.

Number Cycles

Stepwise, Thirds and Fourths Letter Cycles

C major scale cycles

F major scale cycles

G major scale cycles

Thirds Letter Cycles in All Keys

For each cycle, the key letter name is below the number “1”.

OCTAVES, SCALES AND CHORDS

What is an Octave?

When notes are arranged in ascending or descending alphabetical order, every eighth note repeats. This range between the first and eighth notes in this alphabetical order is called an octave.

C major scale, range one octave

a range of eight notes inclusively

numbered tones	1	2	3	4	5	6	7	1	1	1

lettered tones	G	A	B	C	D	E	F#	G	G	G

TAB: 3 0 2 3 0 2 4 0 0 3

What is a Scale?

A scale is a collection of between five and twelve notes (inclusive) that spans an octave. Scales commonly involve step-to step intervals of one, two or three semi-tones (half steps or one-fret intervals).

Pentatonic scales have five notes per octave and are common to popular music, especially in blues, rock and country guitar solos. *Heptatonic scales* have seven notes per octave and are common to classical music and jazz. Common heptatonic scales are the major scale and its seven modes, harmonic minor scale and the mode on its fifth (Phrygian major), melodic minor and the modes on its fourth step

(Lydian dominant) and seventh step (super Locrian or Locrian flat four).

When playing the notes of a scale in ascending or descending order, they repeat at the octave.

What is a Chord?

A chord is two or more notes played at the same time. Any chord tone may be doubled. A chord with three *different* notes may have four notes, where one note occurs twice. Two note chords are typically referred to as intervals.

- G Major:** Notes G (3rd fret), D (3rd fret), B (2nd fret). Tab: 3 3 2
- A5:** Notes A (2nd fret), E (2nd fret), A (5th fret). Tab: 2 2 5

NOTE SETS

Collections of two to twelve unique notes are *note sets*. They are distinguished from unrelated single notes by being specific collections of notes that make intervals, chords and scales.

A pair of unique notes played at once (sustained together) or sequentially is called an *interval*. Three or more unique notes played at once are called a *chord*. Five or more unique notes spanning less than an octave played in ascending or descending order are called a *scale*. Most note sets encompass an interval of an octave or less, but larger intervals and larger chords span more than an octave.

Chords and Arpeggios

Chords are usually constructed with intervals of a minor third (three half steps or frets) or larger. When chords are played one note at a time, they are called *arpeggios*. Like a chord, an arpeggio can span more than an octave.

Arpeggios can be played in order of pitch, ascending up or down. Chords can be held (their notes sustained together, usually with multiple fingers sustaining pressure) while picking their notes in a *patterned arpeggio* pattern (commonly called *fingerpicking* or *Travis Fingerpicking*). See [“Comping Design”/Linear Arpeggios](#) and [Travis Fingerpicking and Piedmont Blues](#).

chord and scale names

You should learn the names of all types of chords and scales common to the music you want to play. Chord types and names can be learned in [“Chord-Naming Conventions”](#) and [“All Scale-tone Chords”](#). Scale types and names can be learned in [“Modes”](#) and in [“Key Scales, Chord Scales and Parent Scales”](#).

chord construction

The primary method of constructing chords is with every other note. This is called *tertian harmony*, meaning made of thirds (each note to the next is three notes, inclusively).

Chords with three notes are called triads. The every-other number or ever-other letter pattern is called thirds (1-3-5-7-2-4-6-1- or F-A-C-E-G-B-D-F). Tertian chords are built in thirds. Due to the varied spacing between the notes of the major scale, tertian triads are of varying qualities, some major, some minor and one of them diminished.

So, a three-note chord built on the first step of a major scale (or other seven tone scale) uses scale tones 1, 3 and 5. A three-note chord built on the second step of a major scale uses scale tones 2, 4 and 6; and so on. Since a C major scale has all natural notes (no sharps or flats, just C-D-E-F-G-A-B), a tertian chord build on “C” (with ever-other note) would have the notes C, E and G. A triad on “F” would have F, A and C (remember, the alphabet starts over after “G”).

Read more about this in [“Introduction To Chord Progression”](#), especially [Basic Definitions](#).

MUSICAL STRUCTURES AND DESIGN

Note sets ascending or descending in linear order make scales or arpeggios. Their order is more whimsical and abstract when we create interesting music.

A musical structure is a note set conceived in a timeline. When you see a scale or an arpeggio written in ascending or descending order, it creates a structure. That structure can then be designed abstractly. The design of the structure can be expressed visibly by viewing the pattern of note heads in written music, which makes a *melodic curve*. See [“Theme and Variation”/Harmonic Theme And Variation](#) and [Melodic Curve Exercises](#).

The consecutive order of note sets of primarily half and whole steps makeup scales. Consecutive order of note sets primarily thirds makeup arpeggios. The distance between two notes is called an interval. Major third intervals are equivalent the distance from the first to third step of a major scale (four frets, like frets five to nine). Minor third intervals are a half step smaller (like frets five to eight).

[“Melodic cells”](#) are the smallest units of melody of three to seven notes, rarely more. When you combine cells or repeat a cell on different notes, you are creating musical design.

SONG SECTIONS

verse

The verse tells the story. It is almost always softer and calmer than the chorus and is commonly in the same key as the chorus, and is usually in what is considered the overall key of the song. Two or more verses commonly occur before the first chorus. Verses don't have to come before the chorus.

Verse comes from the Latin word *versus*, which means a line of writing and is based on the Proto-Indo-European root *wer*, meaning to turn or bend. Think of "a turn of phrase", "bending the listener's ear" or "bending the truth" to tell a story.

chorus

The title of the song is usually sung in the chorus and commonly summarizes the story. It is usually louder and fuller than the verse, with more harmony vocals. Etymologically, chorus is an extension of "court" referring to an enclosed area where people assemble to play and sing music or theatrical performance. The chorus comes after the verses a little more commonly, but sometimes songs start with the chorus.

The *refrain* is the line of words that is repeated during the chorus.

pre-chorus, pre-verse, post-chorus, post verse

Around 1990, I started seeing "*pre-chorus*" in printed sheet music. It seemed a strange term to me at first, but I've accepted it over time. As you would think, it comes before the chorus, and usually builds excitement into the chorus. *Post chorus* likewise applies an addendum to the end of the chorus without changing to another section.

The term could be likewise applied to content that precedes the verse: a pre-verse.

Post verse could apply the same principle as post chorus in applying an addendum to the end of a verse without changing to another section.

bridge or middle eight

The section that connects the verse and chorus is called the bridge. It might not occur until the second time the verses and chorus are played. It more commonly follows the chorus. The bridge is more often in a different key from the verse and chorus, typically a key a perfect fourth (five frets) higher than the verse.

The *middle eight* is a type of bridge that occurs between two choruses using different melody and usually different chord progression. The middle eight can choose from a wide variety of chord progression types.

intro

The intro (abbreviation for introduction), is played at the beginning of a piece. Songs don't always have intros. Intros are often borrowed from the end of one of the main sections of the song, the verse or chorus (A or B sections in an instrumental piece). They are typically based on the end of the verse or chorus (A or B section) and followed by the same section they go into in the song.

For example, at the end of the chorus, the music flows into the verse. The intro starts with the end of the chorus, then goes into the first verse. A twelve bar blues commonly begins with the last four bars of the twelve bar chord progression, followed by the twelve bar progression from its beginning.

Intros are typically hooks (see [Theme and Variation](#)/Hooks), thematic material or a guitar solo. When an intro has the nature of a guitar solo, it is usually more brief and simpler, but not always. Here are a few examples of pop songs that begin with a guitar solo: All Along the Watchtower, Can't You Hear Me Knocking, Cliffs of Dover, Fun Fun Fun, Gravity, I Know a Little, Johnny B. Goode, Little Wing, Oh Well part 1, Purple Haze, Red House, Reeling In the Years, Someday After a While (From the Cradle), Strangle Brew, Texas Flood, Thunderstruck, Voodoo Child and the live version of [Midnight in Harlem](#) by the Tedeschi-Trucks Band on the album Everybody's Talkin'.

ending

Like an intro, an ending should be based on content borrowed from the verse or chorus. It is often the last four bars of a verse or chorus played three times, followed by an ending chord. The ending is expected to complete with the chord named after the key, but can use a deceptive cadence, ending on an unexpected chord.

fade-in

A song sometimes begins with a fade-in. An intro or vamp is usually used for the fade-in and usually occurs in recorded music, not live music. The volume swells up from silence, usually to the level standard for the song. Fade-in is not used often, probably because, like fade-outs, it is dynamically and expressively weak.

vamp

A rhythm section with a repeating chord progression (or on a single chord), without any significant thematic material. Vamps are used as "filler" between other sections. They are typically used to setup the section that follows them by establishing the "groove", rhythmic nature, mood, chord sound, etc (any or all of these).

solo

We're used to hearing a guitar solo (or other instrument, if they insist) two-thirds of the way through a song. In this section, the guitar player improvises, or ad-libs. The melodic content may be based on the

vocal part in the verse or chorus, or may be [theme and variation](#). It is important to have some structure to the solo and not just play a bunch of dis-related licks.

The accompaniment is usually simpler during a solo, so the listeners focus can be on the solo content. If the accompaniment has melodic themes, it makes it more challenging for the soloist to make their melody understandable at the same time as the themes in the accompaniment.

interlude or instrumental break

An interlude is a brief instrumental section between main sections like verse and chorus. It is similar to a vamp but usually has thematic material (melody) that is less important than that of the main sections.

An instrumental break is usually improvised or composed to sound more improvisational.

“A” section and “B” section, etc.

In instrumental music, there are usually two, sometimes three or more main sections. The sections are traditionally labeled with letters: section A, section B, section C, etc.

AABA form

The most common song structure is thirty two bars, with two eight-bar A sections, an eight-bar B section and an eight-bar A section. Sections may be of different lengths, but eight, twelve and sixteen bar sections are most common.

a cappella (in the manner of the chapel)

When vocals are sung without instruments, they are called a’ cappella, meaning “in the manner of the chapel”. In early western religion, it was thought unholy to have musical instruments in the place of worship. Overtime, instruments have been accepted in churches, along with every imaginable style of music.

drop sections or drop beats

Like the middle eight, drop sections can follow a chorus to increase intensity with a abruptly lowered volume with an optional change in rhythm. This has become popular in EDM (Electronic Pop Music) and other pop styles since 2010.

elision (also called collision or phrase overlap)

An elision is a song section where different sections overlap one another, usually briefly. It is mostly used in up-tempo music to create tension and drama and to keep the song from losing its energy during resting points (held sustain) at cadences, typically on a tonic or dominant chord.

With an elided cadence, you can bring the section to a cadence on the tonic and immediately begin a new section of music which overlaps with the cadence. The elided cadence may borrow thematic material from other sections of the song.

In Cyndi Lauper's *Time After Time*, the last word of the first verse is omitted, singing "time after ..." (omitting "time"). In place of the missing "time", she sings "sometimes" the first word of the second verse.

TRIAD ARCS

Triads are chords made up of three different notes. The notes may be repeated in octaves. Major triads combine the first, third and fifth steps of a major scale. Minor triads combine the first, flatted third (one fret toward the head of the guitar from the third) and fifth of a major scale.

I refer to the three groups of notes that represent all major chord tones or all minor chord tones on the fretboard as *arcs*, since they are the notes conceptually embraced by an arc, as shown below. Notice that since all of the notes cannot be fretted with the fretting hand, some of the notes on the smaller diagrams below are to be fretted with the *picking* hand. On those smaller diagrams, the “*i*” represents fretting with the picking hand index finger and the “*m*” represents fretting with the picking hand middle finger.

All the diagrams below are movable and may be placed on the fretboard for any key. The notes in large circles are the roots of the chord, the notes after which the chord is named, such as “D” for a D minor chord. Even where a large circle is empty, it shows the location of a chord root.

major chord tone arcs

minor chord tone arcs

NOTE NAMES

Also see the chapter “[Memorizing Fretboard Letter Names](#)”.

Natural Notes in Open Position

An open string is a note played without fretting, such as the sixth string open “E” and the fifth string open “A” commonly used in tuning. Open position refers to playing in the first position, where the first finger hovers over the first fret and where open strings are involved.

The open strings are named “E, A, D, G, B, E”, which can be memorized with the sentence “Eat A Darn Good Breakfast Early” (the first letter of each word). The distance from each note to the next in alphabetical order is two frets (leaving an “empty” fret between them), except “B” to “C” and “E” to “F”, which are one fret. If you know the names of the notes on the piano, you know that the pairs of notes “B” to “C” and “E” to “F” each have no black key between them. So, on the guitar there is likewise no note between them.

Name these natural notes shown below in open position as you play them. There are three notes on each string except the third string where there are only two.

E F G A B C D E F G A B C D E F G F E D
 0 1 3 0 2 3 0 2 3 0 2 0 1 3 0 1 3 1 0 3

C B A G F E D C B A G F E
 1 0 2 0 3 2 0 3 2 0 3 1 0

Natural Notes on the Sixth, Fifth and Fourth Strings

Notes with their letter name followed by a sharp (#) are raised in pitch one fret and moved one fret toward the body of the guitar (or to an equivalent pitch on the next smaller string). Notes with their letter name followed by a flat (b) are raised in pitch one fret and moved one fret toward the head of the guitar (or to an equivalent pitch on the next larger string). A “natural” (“plain”) note has no sharp nor flat.

Name these natural notes on the sixth, fifth and fourth strings as you play them:

sixth string natural notes

E F G A B C D E F G A G F E D C B A G F E

0 1 3 5 7 8 10 12 13 15 17 15 13 12 10 8 7 5 3 1 0

fifth string natural notes

A B C D E F G A B C D E B A G F E D C B A

0 2 3 5 7 8 10 12 14 15 17 15 14 12 10 8 7 5 3 2 0

fourth string natural notes

D E F G A B C D E F G F E D C B A G F E D

0 2 3 5 7 9 10 12 14 15 17 15 14 12 10 9 7 5 3 2 0

Notice above that notes in alphabetical order are two frets apart, including G to A (where the alphabet starts over), except B to C and E to F which are one fret apart.

OCTAVE SHAPES

Octave Shapes from Open Position Major Chord Roots

The root of a chord is the letter after which it is named. A “C” chord has a “C” root. An “Am” chord has an “A” root. A “Bbm” (B flat minor) chord has a “Bb” root. On the diagrams in the first row below, the roots are in the large circles. In each of the five chord diagrams in the first row below, the circled notes are the notes after which the chord is named. The circled octave shapes E, D, C, A and G in the second row below are the basis of fretboard orientation for keys, chords and melodies. .

“B” and “F” octave shapes are unnecessary

The octave shapes for “B” and “F” are not used as standard references because those letters make octave shapes already represented by other letters. The octave of the note “B” in open position makes the same shape as the note “C”. The octave of the note “F” in open position makes the same shape as the note “E”.

There is no practical fingering for a “B” chord in open position, so “C” was used instead. “E” is better to use than “F”, since it is an easier chord to fret for those just starting guitar and has a more parallel relationship to the other chords “A” and “D” that also have an open string root (bass note on the largest string that names the chord).

octaves of all natural notes horizontally on the fretboard

<p>E I</p> <p>1 5 1 3 5 1</p>	<p>E notes I</p>	<p>F notes I</p>	<p>G notes III</p>	<p>A notes V</p>	<p>B notes VII</p>	<p>C notes VIII</p>	<p>D notes X</p>	<p>E notes XII</p>

Ed Cage Movable Octave Shapes

Moving all of the notes of any chord up an equal number of frets transposes the chord to a new key, but with the same quality, as demonstrated with each chord in the first row below and the transposed chord beneath it in the second row. When you transpose, the octave shape (E, D, C, A or G) does not change. Notice that for each chord in the first row, it shares the same octave shape with its transposed version in the second row.

In a single key, such as “F”, shown below, the octave shapes occur in the order E-D-C-A-G, then repeat. To signify that the order repeats, I refer to the order as “Ed Cage”. It could also be called “caged” in starting the cycle on “C” or “Aged C” to start on “A”. I prefer “E” as the point of reference, since its tone center and root is the lowest note relative to your hand.

Single Octaves

Notes repeat every eight notes apart in a major scale, so they are called *octaves* (“okto” is Greek for eight). Each of the smaller diagrams below shows an eight note range of a major scale fingering, spanning an *octave*. Play the notes in numerical order, from “1” to “1” on each of the small major scale diagrams below. The circled notes are one octave apart.

If you can play a major scale in any particular octave area and modify it to make any other scale or chord, arpeggio or melodic phrase. All scales, chords, arpeggios and melodic phrases can be represented with the numbers and altered numbers of the major scale.

Playing all of the diagrams above on the fretboard relative to the large diagram, with the top fret on the large diagram assigned to a specific fret (and note), would make major scale fingerings in one key all over the fretboard. The key would be named after the note on which the “1’s” occurred (which would all be the same note).

The Seven Octave Fingerings

The diagrams below can be played in any position (at any fret). Numbers within the diagrams indicate fretting fingers.

Primary Octave Fingerings

These are "two string, two fret" octaves.

These are "two string, two fret" octaves with compensation for tuning on the smallest two strings.

Notes on the smallest two strings must relatively be moved up one fret (higher in pitch), when combined with the larger four strings..

Secondary Octave Fingering

The only un-compensated "three string, three fret" octave (compensated versions are shown at the right).

These are "three string, three fret" octaves with compensation for tuning on the smallest two strings.

Notes on the smallest two strings must relatively be moved up one fret (higher in pitch), when combined with the larger four strings.

Five Octave Shapes From Seven Octave Fingerings

We can comfortably reach a span of four or five frets, so the full-fretboard pattern of octaves needs to be conceived in sections. Sections of three or four frets can be related to octaves. By combining two pairs of the seven octaves and using the other three octaves unchanged, five octave shapes are produced.

Here are the five octave shapes. Notice how each one occurs as the roots of an open string chord:

What's Significant about the Repetition of Each Note?

To master the fretboard, you need to learn to finger scales, chords, arpeggios and melodies in two ways:

- ♦ playing in one key all over the fretboard
- ♦ playing all keys in one area of the fretboard

Playing in One Key All Over the Fretboard

When playing a scale, arpeggio or melodic phrase at any particular location on the fretboard, you need to orient your current octave shape to the sequence of them, having memorized other fingerings categorized by their octave shape.

Full-fretboard F major and full-fretboard F minor chord tones below demonstrate chord tones on the entire fretboard on a single chord root (“F”).

Full-Fretboard F Major Chord Tones

Full-Fretboard F Minor Chord Tones

Playing in All Keys in One Area of the Fretboard

You can also use octave shapes to conceive playing chords, scales or melodies in all keys in one area of the fretboard. All of the fingerings below are in the fourth or fifth position, meaning the index finger is hovering over the fourth or fifth fret.

Fingerings one through seven are numbered in relation to the lowest-pitched tone fretted with the index finger on the sixth string. In fingerings 7, 6, 3 and 2, the position is numbered in relation to the lowest-pitched tone on the sixth string., In fingerings 5, 4 and 1, the position is one fret higher than the lowest-pitched tone on the sixth string. Read the chapter [“Playing in Position”/Strict Vertical Position](#).

The Full-Fretboard “Diamond and “Z” Pattern

The “diamond and Z” pattern shown at the left occurs in the octaves of every note. Compare the diagrams below. Be able to visualize the “diamond and Z” pattern on any note.

INTERVALS

What is an Interval?

An interval is a measurement of the difference in pitch between two notes. Intervals are compared to distances between notes in the major scale. Before discussing the major scale, you'll need to know about the units used to measure the distances between its notes. The *whole step* is a standard unit of measurement that indicates a distance of two frets. The *half step* indicates a distance of one fret.

Fingering Intervals

introduction: intervals of an A major scale in the bass

The major scale fingering at the left shows an A major scale in the bass. Scale tone five is shown with an option on both the fifth and fourth strings. The pairs of notes on the diagrams that follow show the basic intervals from a second (1 and 2) through an octave ("1" and "1" eight notes higher).

whole steps on a single string

These can be fretted in any position (anywhere up and down each string). Notice that this fingering is the same for each pair of strings. Of course, the notes could be fretted with any combination of fingers.

whole steps with one note on an open string

This fingering is the same for each pair of strings. The fretted notes could be fretted with any finger.

whole steps fretted on each of two adjacent strings

This fingering is the same for each pair of strings *except* the third and second string, where it is fretted with one “empty” fret between the fingers, instead of two. The notes could be fretted with any practical combination of fingers.

half steps on a single string

These can be fretted in any position (anywhere up and down each string). Notice that this fingering is the same for each pair of strings. Of course, the notes could be fretted with any combination of fingers.

half steps with one note on an open string

This fingering is the same for each pair of strings. The fretted notes could be fretted with any finger.

half steps fretted on each of two adjacent strings

This fingering is the same for each pair of strings *except* the third and second string, where it is fretted with two “empty” frets between the fingers, instead of three. The notes could be fretted with any practical combination of fingers.

three ways to finger half and whole steps

There are three ways to finger half steps and three ways to finger whole steps (not involving open strings):

a half step on one string
may be on any string,
at any position,
with any fingers

whole step
may be on any string,
at any position,
with any fingers

a half step on two strings
may be on adjacent pair of strings
except NOT the second and third strings,
at any position, with any fingers
(as long as you can reach!)

whole step on two strings
may be on adjacent pair of strings
except NOT the second and third strings,
at any position, with any fingers
(as long as you can reach!)

a half step on two strings
the unique fingering
on the second and third strings,
at any position, with any fingers

whole step on two strings
the unique fingering
on the second and third strings,
at any position,
with any fingers

Formulas: Numbering the Major Scale Tones

In the solfeggio system, the intervals of the major scale are labeled with the syllables “do, re, me, fa, sol, la, ti”. Here is a C major scale, played in the first position (with the first finger at the first fret) and labeled both with the solfeggio syllables and the numbers 1 through 7:

letter names: 1 2 3 4 5 6 7 1

sofeggio: do re me fa sol la ti do

T 4

A 4

B 4

3 0 2 3 0 2 0 1 1 0 2 0 3 2 0 3

See [Numbered Tones \(Formulas\)](#), the next section.

Recognizing Half Steps in the Major Scale

In making up major scale fingerings, each note is assigned a number, one through seven. The half steps (one fret intervals) occur between numbered major scale tones 3 and 4 and between 7 and 1 (ascending in pitch). These scale steps are circled in the example below. The remaining steps of the major scale are whole steps apart, which include the intervals between the following pairs of numbered scale tones: “1 to 2”, “2 to 3”, “4 to 5”, “5 to 6” and “6 to 7”.

The intervals between the numbered tones of the major scale are illustrated using the “string diagrams” shown below.

Play the Major Scale on One String

This is an E major scale, named after “E”, the note on which it begins and ends. A traditional set of names for the notes of a major scale is “do, re, me, fa, sol, la, ti, do.” The eighth note has the same name as the first one and is referred to as being an *octave* higher than the first note. Speak their names of the notes below as you play them.

The musical notation shows the E major scale on a guitar. The treble clef and 4/4 time signature are indicated. The notes are: do (E), re (F#), me (G#), fa (A), sol (B), la (C#), ti (D#), do (E). The fret numbers for the T, A, and B strings are: T (0, 2, 4, 5, 7, 9, 11, 12), A (0, 2, 4, 5, 7, 9, 11, 12), B (0, 2, 4, 5, 7, 9, 11, 12).

The tones of the major scale can also be labeled with the numbers “1-2-3-4-5-6-7-1”. Speak the numbers as you play the notes.

Notice that the distance between the tones are whole steps, except half steps between “3” and “4” and between “7” and “1” (where “1” begins the next octave).

The musical notation shows the E major scale on a guitar. The treble clef and 4/4 time signature are indicated. The notes are: 1 (E), 2 (F#), 3 (G#), 4 (A), 5 (B), 6 (C#), 7 (D#), 1 (E). The fret numbers for the T, A, and B strings are: T (0, 2, 4, 5, 7, 9, 11, 12), A (0, 2, 4, 5, 7, 9, 11, 12), B (0, 2, 4, 5, 7, 9, 11, 12). The intervals between the notes are circled to show the whole steps and half steps.

Perspective for Piano Players

If you've played piano, you know "C" is to the right of each pair black keys (see below). You also would know that the white keys are named in order alphabetically to the right.

Each white key is represented on the guitar with a note given a plain letter name like "A," "B" or "C". Each black key represents a note between the letter names. So, on the guitar, the black keys are represented by notes in between most alphabetical pairs of letters, including "G" and "A", which are consecutive in the cycle "A - B - C - D - E - F - G - A, etc."

Where there is no black key on the piano, there is no note on the guitar, so "B - C" and "E - F" are one fret apart (see the piano diagram below).

See the chapter "[Major Scale Fingering](#)", especially the section: [Major Scale Fingering Numbers](#).

NUMBERED TONES (FORMULAS)

Reference Major Scales for Note Numbers

The tones of any melody, scale, arpeggio, chord or bassline can be expressed in numbers. The universal reference is the major scale. The major scale needs to be conceived in the key of the melody, scale bassline or on the root of the chord or arpeggio. By using sharped and flatted versions of the major scale, any chromatic note can be defined with a number. A “C” note in a melody or in a chord in the key of “C” would be numbered “1”. A “D” note would be “2”. An “Eb” would be flat three.

Chord Formulas

The number expression for a chord can be called its *formula*. The formula for a dominant seventh chord such as C7 is 1-3-5-b7. You can learn more about chord formulas in [“Chord Naming Conventions”](#) and [“All Scale-Tone Chords”](#) and [“Chord Archetypes”](#).

numbering chord tones may involve double sharps or double flats

Numbering the tones in a chord or arpeggio may involve uncommon major scales with double sharps and double flats. For example, the flatted ninth in Ab7b9 is B double flat. The formula for a seven flat nine chord is 1-3-5-b7-b9. “b9” is the same note as “b2”. In the table above, you can see that the “b2” in the key of Ab is “Bbb” (B double flat).

Reference major scales include redundant major scales not used in performance, such as “D#” (D sharp) major, where “Eb” is used instead, with the same pitches. “D#” may be a chord root in the key of B major, where you would think in the hypothetical key of D# to number tones in the D# chord. D sharp major would have five notes with a sharp name and two with a double sharp. See the table above.

chord tones in the upper octave

In chords, numbers above eight can be used to imply chord tones in the upper octave. “9” is “2”, “11” is “4” and “13” is “6”. To quickly convert the numbers “8” and above, subtract seven. [“Chord Naming Conventions”/Chord-Naming Rules by Chord Tone/Numbered Tones Above Seven.](#)

Tones by Number on Diagrams

The numbered tones on chord diagrams may be finger numbers, where you’ll find the numbers “1, 2, 3 or 4” (or “T” for thumb). Or, the numbered tones on the diagram may include numbers above “4” and numbered tones with flats or sharps, such as “b3” or “5”. On chord or arpeggio diagrams, such as “C13” and “C13#11” below, the numbers below the diagram are the formula numbers.

Reference Major Scale Fingerings

seven in-position fingerings, numbered by scale tones

Major scale fingerings are numbered in this course according to the number of lowest note fingered with the index finger on the sixth string. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the an alternate string. Head-reach (index) options are generally preferred for scale and melody, while body-reach (pinky) options are preferred for arpeggios.

fingering 1 3 index reaches	fingering 2 2 pinky reaches	fingering 3 no reaches	fingering 4 2 index reaches	fingering 5 4 index reaches	fingering 6 1 pinky reach	fingering 7 no reaches

in-position major scale fingerings by finger number

“1” is the index finger, “2” is the middle finger, “3” is the ring finger and “4” is the little finger. Head-reach (index) options are generally preferred for scale and melody, while body-reach (pinky) options are preferred for arpeggios.

fingering 1 3 index reaches	fingering 2 2 pinky reaches	fingering 3 no reaches	fingering 4 2 index reaches	fingering 5 4 index reaches	fingering 6 1 pinky reach	fingering 7 no reaches

THE INTERVALS NECESSARY TO CONSTRUCT A MAJOR CHORD

why is this important?

If you know the location of all the tones of a major chord in the area of the fretboard in which you are playing, any other two is two frets (half steps) up or down.

major is 1, 3 and 5

A major chord contains tones 1, 3 and 5 of a major scale on its chord root. You will need to know how to finger the intervals from the root ("1") to the each of the other chord tones. Play each of the major scale fingerings below. Next, isolate scale tones 1, 3 and 5 and play them in ascending and descending order. When you play major scale tones 1, 3 and 5, you are playing a major chord arpeggio named after the note on "1".

Notice that the "1" after which each major chord arpeggio is named occurs in one of five octave shapes. The octave shapes are shown by the circled notes below. Review Chapter 4: Octave Shapes.

fingering 1	fingering 2	fingering 3	fingering 4	fingering 5	fingering 6	fingering 7
↑	↑	↑	↑	↑	↑	↑
the shape of the "1"s above matches the shape of the circled "E"s below	the shape of the "1"s above matches the shape of the circled "D"s below	the shape of the "1"s above matches the shape of the circled "C"s below	the shape of the "1"s above matches the shape of the circled "A"s below	the shape of the "1"s above matches the shape of the circled "A"s below	the shape of the "1"s above matches the shape of the circled "G"s below	the shape of the "1"s above matches the shape of the circled "E"s below

Perfect Fifth Fingerings

Perfect fifth intervals are equal to the distance between major scale tones “1” and “5”. If you locate the lower-pitched note of any perfect fifth fingering below as the number “1” in a major scale fingering, you should be able to locate “5” as the higher-pitched note in the fingering.

Primary Perfect Fifth Fingerings

(compensated versions are shown at the right).

This primary perfect fifth fingering

is compensated for tuning on the smallest two strings.

Notes on the smallest two strings must relatively be moved up one fret (higher in pitch), when combined with the larger four strings..

Secondary Perfect Fifth Fingerings

(compensated versions are shown at the right)

These secondary perfect fifth fingerings

are compensated for the tuning on the smallest two strings

Notes on the smallest two strings must relatively be moved up one fret (higher in pitch), when combined with the larger four strings.

Major Third Fingerings

Major third intervals are equal to the distance between major scale tones “1” and “3”. If you locate the lower-pitched note of any major third fingering below as the number “1” in a major scale fingering, you should be able to locate “3” as the higher-pitched note in the fingering.

a major third is fingered the same on each string

Major Third Fretted on Adjacent Strings

Note the unique fingering on the second and third string.

Perfect Fourth Fingerings

In constructing a major chord, you'll often need to know a perfect fourth fingering to locate the fifth of the chord below the root. Perfect fourth intervals are equal to the distance between major scale tones "1" and "4". If you locate the lower-pitched note of any major third fingering below as the number "1" in a major scale fingering, you should be able to locate "4" as the higher-pitched note in the fingering. Perfect fourth intervals also occur in major scale fingerings between scale tone "5" and the next higher-pitched scale tone "1", where they demonstrate the relationship between the fifth ("5") and the root ("1") of a chord.

perfect fourths fretted on adjacent strings

perfect fourth fingerings on adjacent open strings

fourths and guitar tuning

The guitar is tuned in fourths with one exception. If any note on strings six, five, four and two is considered as the first step of a major scale, the fourth step of that scale is on the next smaller string at the same fret. This applies to open strings as well. For the first string, the "next smaller string" is not available, unless hypothetically. The exception is the third string. If any note on the third string is considered to be the first step of a major scale, the third step of that scale is at the same fret on the second string.

RHYTHMIC WORDS

Sensing a Regular Pulse

In music, *meter* is the measure of regular periods of time. Poetic meter in Greek, Latin, Arabic and Persian cultures has been the basis of rhythm in music. Sections of Greek plays alternated spoken and sung form. The spoken sections used a regular pulse or beat. This tradition carried over to symphonic music and to modern music with regular groups of beats called bars.

Most music is based on a regular pulse or *beat*. Listeners can sense the pulse and are accustomed to tapping their foot, snapping their fingers or moving their torsos (dancing) in time with the beat (pulse). The rate of this pulse or beat is measured in beats per minute and is called the *tempo*.

Dividing the Pulse Evenly

dividing time into regular intervals

Humans have the ability to conceive short periods of time (similar to the pace of walking) divided into two, three or four equal periods. Our concepts of rhythm in music are based on this ability. We use three basic math operations in notating music rhythmically: halving, multiplying by one and a half and dividing into a specified number of equal subdivisions. These could be called halving, dotting and triplets.

beats and bars

Beats are analogous to footsteps in walking or running. Beats are regular pulses of time. Beats are usually arranged in regular groups called bars. The most typical number of beats per bar are four or three, sometimes two.

compound time

When there are more than four beats per bar, it is usually thought in *compound time* by thinking of a bar as a combination of smaller numbers of beats. Five-beat bars are usually thought as three beats plus two beats, like Dave Brubeck's "Take Five". Six-beat bars, as in Miles Davis' "All Blues" or John Coltrane's "Afro Blue" are divided into two groups of three beats. Twelve-beat bars, like a slow blues (Albert King's "Same Old Blues") or rhythm and blues ballad (Otis Redding's "I've Been Loving You Too Long") are divided into four groups of three beats.

dividing the beat into any number of equal parts

Each beat can be divided into equal parts, most commonly two, three or four parts. Halving can divide the beat into two parts. Halving again can divide it into four parts. Dividing the beat into three parts creates triplets.

Selecting From a Regular Pulse

ducks in an arcade analogy

Imagine shooting ducks (fake ones, to re-assure you bird lovers) in an arcade. A conveyor belt rotates past your field of vision with mounts attached to it at regular intervals (equal distances apart). Each mount has a duck attached to it with a hinge, but most of them have the duck folded back, so it is out of view. Occasionally, a duck is flipped forward, toward you, on its hinge. It is your goal to respond and pull the trigger and project a bullet onto the duck.

To accurately shoot a duck on the conveyor, you need to focus straight ahead at a fixed point where the conveyor passes by your field of vision. While you focus on the fixed point, you also have peripheral vision to help you anticipate and predict precisely when a duck will arrive at your focal point. Relax your mind previous to seeing a duck peripherally. When you see a duck peripherally, wait until just before the duck will pass by your focal point to heighten your attention. This will give you the highest power of concentration.

In targeting the performance of a note (or chord) at a specific point in time, you think in terms of counted pulses to anticipate and predict. You keep the number of the beat (or its subdivision, such as the third quarter) in mind as your focal point. Like with the duck, when you sense your counting is peripherally nearing the targeted beat (or subdivision), wait until just before the target to heighten your attention.

Halving, Dotting and Triplets

halving

The most basic rhythmic notation involves a series of values that keep cutting the duration in half. The upper number on a time signature such as $\frac{3}{4}$ indicates the number of beats per regular period, where each period is called a bar.

The lower number on a time signature indicates the value of the whole note. Whatever number of beats is assigned to a whole note, half that number is assigned to a half note, one fourth as many beats to a quarter note, one eighth as many to an eighth note, and so on.

dotting

Dotting multiplies any note durations in the “halving” system by 1.5, making the value half again as much. A note value of two beats becomes three when dotted. A note value of a half a beat becomes three quarters of a beat when dotted, and so on.

tuplets

With tuplets, the divisions of a period of time can be other than dividing by two or four. A triplet divides a beat into three equal parts. A quintuplet divides it into five. A modern expression of tuplets is specifically indicate the new number of notes played in place of the original number of notes with two numbers separated by a colon, such as “3:2” to indicate three notes in the time of two.

Triplets occur where a period of time was previously divided into two parts, an enclosing notation like a bracket with the number “3” can indicate that it should be divided into three parts instead.

Duplets occur where a period of time was previously divided into three parts, an enclosing notation like a bracket with the number “2” indicates the beat should be divided into two parts instead.

Other tuplets. Triplets and duplets are tuplets, as are all other changes of division.

Counting time

traditional counting syllables

Count beats with whole numbers, such as four beat bars counted: “1-2-3-4, 1-2-3-4” etc. Divide beats into two parts by speaking “and” after each number. In written form the “and” may be shown as the mathematical plus symbol (“+”): “1 + 2 + 3 + 4 +”.

Up until about 1970, we used a lowercase ampersand to notate the “and” more commonly than the “+” symbol, but the lowercase ampersand is no longer included in our typographical characters. It was drawn as follows:

Three parts per beat should be counted with each beat number, followed by the syllables “trip” and “let”: “1 trip let 2 trip let three trip let four trip let”. Alternately, the three parts for each beat could be counted “1-2-3”, so four beats of triplets would be spoken “1-2-3, 1-2-3, 1-2-3, 1-2-3”. Though the “one-trip-let, two-trip-let, three-trip-let, four-trip-let” method of counting is a bit more tedious to speak, it does designate the beats.

Four parts per beat are counted “1, e, and, a, 2, e, and, a” etc., written “1 e + a 2 e + a 3 e + a 4 e + a”. Four parts for each beat could also be counted “1-2-3-4”, but without designating the beats.

Other divisions of the beat, such as five or six parts can be counted with an entire set of numbers for each beat, such as counting “1-2-3-4-5” during a beat to represent its five parts.

Rhythmic Words Defined

A rhythmic word is a group of notes that represents a selection of the three or four parts per beat.

four-pulse rhythmic words

Make a down-up-down-up strumming motion for each beat. Start with these selections:

	all four	Jingle Bells	gallop	Creedence	2-3-4
strum motion	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑
strum contact	↓ ↑ ↓ ↑	↓ ↑ ↓	↓ ↓ ↑	↓ ↑ ↑	↑ ↓ ↑
count whole beats	1 2 3 4	1 2 3	1 3 4	1 2 4	2 3 4
count half beats	1 + 2 +	1 + 2	1 2 +	1 + +	+ 2 +
count quarter beats	1 e + a	1 e +	1 + a	1 e a	e + a

	1-2	1-3	1-4	2-3	2-4
strum motion	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑
strum contact	↓ ↑	↓ ↓	↓ ↑	↑ ↓	↑ ↑
count whole beats	1 2	1 3	1 4	2 3	2 4
count half beats	1 +	1 2	1 +	+ 2	+ +
count quarter beats	1 e	1 +	1 a	e +	e a

	3-4	1	2	3	4
strum motion	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑	↓ ↑ ↓ ↑
strum contact	↓ ↑	↓	↑	↓	↑
count whole beats	3 4	1	2	3	4
count half beats	2 +	1	+	2	+
count quarter beats	+ a	1	e	+	a

three-pulse rhythmic words

strum all down	all three	swing	Afro-Cuban	waltz	1	2	3
count whole beats	1 2 3	1 3	1 2	2 3	1 2 3	1 2 3	2 3
count triplets	1 trip let	1 let	1 trip	trip let	1 trip let	1 trip let	trip let

With four parts per beat (sixteenth notes) for example, a two-beat rhythm may choose all four parts on the first beat and parts 1-3-4 of the second beat. In making a down-up-down-up strumming motion for each beat, you would contact the strings all four times for the “1-2-3-4” rhythmic word. For the “1-3-4” rhythmic word, you would still make the down-up-down-up strumming motion, but not contact the

strings with the pick (or finger) on the first “up” (the second of the four motions in down-up-down-up). So, 1-3-4 is usually strummed down-down-up, with a space of time with no strum on the second of the four pulses.

vocalizing rhythm with “Ba Ahh Um Bop” Syllables

Phrases of music that are based on equal divisions of the beat, such as half beats, can be conceived in terms of on, off and hold. When a note or chord is played, that’s an “on”. When that note or chord is sustained (continued through one or more additional pulses without stopping), it is a “hold”. When there is a silence, it is an “off”. In music notation, rests indicate “offs”.

Vocalizing a rhythmic word helps you to understand it. I use “ba” for “ons”, “ahh” for “holds” (continuing the same breath for the “ba” that preceded it, but surging the breath) and “umm” for “offs”. Additionally, I often use “bop” for the last note before an “off” (remember, an off is a rest).

To get started, a simplified version of vocalizing can use just “ba” for “ons” and “umm” for rests or holds. Once you are comfortable with the simplified “ba” and “umm” system, you can add “ah” and “bop”.

Changing Rhythmic Level. In counting whole beats, say in 4/4, you can count “1-2-3-4, 1-2-3-4, etc.”

Counting half beats can use “1 + 2 + 3 + 4 + 1 + 2 + 3 + 4 +, etc.” Remember, “+” is pronounced “and”.

Where no note occurs on an “and” (+), it can be unspoken, as long as a space in time is left for it. So, in changing from whole beats to half beats (one bar after the other), you can count: “1, 2, 3, 4, 1 + 2 + 3 + 4 +”.

The Rhythmic Level Game. In this game, the leader would count regular bars with whole numbers, randomly speaking “and” after some of the numbers, but always leaving a space in time for the “and”. In time with the next beat after the leader completes a bar, the follower resumes by attempting to replicate the leader’s bar. If the follower fails, the leader would resume with the same bar again. This would repeat until the follower replicates the bar.

The Follower Fails. The game is not necessarily to only test the leader, because if the follower fails (which they may do intentionally), the leader must be prepared to speak their bar again. In the linked example, the follower erroneously says “and” after two, so the leader repeats the example.

Mixed Rhythmic Levels. The game can similarly be played with triplets or sixteenths. Sixteenths are typically four parts per beat. It can even mix two, three and four parts per beat, which can become difficult.

Omitting Redundant Vocalizations. Through the Rhythmic Level Game, you can learn to omit redundant parts of a beat. If a rhythm involves two parts per beat by having whole beat notes on each of the first three beats, then a pair of half beat notes on the fourth beat, you could simply count “1, 2, 3, 4, +”, as long as you are leaving a space in time for each of the unspoken “ands” after 1, 2 and 3.

Perform the Rhythm You Hear Accurately

Ultimately, you should be able to hear a short musical example and recognize the rhythmic words that make it up and be able to replicate the rhythm in time with another musician or in time with a beat imaged by the listener. Optionally, learn to also be able to conceive such an example in music notation, interpret the rhythmic words as a musical sound and play it in time with another musician or in time to a listener.

The process of learning a rhythmic word should begin with an auditory memory of the rhythmic word. Next you need to be able to play the rhythmic word against a metronome or other regular pulse, conceiving the selection of the notes from a continuous pulse. Train yourself to hear a metronomic pulse in your imagination.

Swing Eighths and Swing Sixteenths

Swing eighths and swing sixteenths change the ratio of pairs of notes from two halves to two-thirds and one third, typical of a slow blues, as a standard practice. The $2/3+1/3$ ratio is variable with degrees of swing. Heavy swing may be as exaggerated as $3/4+1/4$ divisions of the beat. The words “Swing Eighths” or “Swing Sixteenths” will appear above the time signature when such a ratio is desired.

Rhythm can be thought of in a digital sense as selections from regular groups of pulses, such as four per beat. Each pulse is performed one of three ways: on, off, or hold, representing a note, a silence and a sustain (of the previous note), respectively.

counting regular swing eighths (2/3 and 1/3 ratio)

When counting swing eighth pairs, use one of these methods:

1. Conceive the division of the beat into three equal parts. Count them in 4/4 (four-beat bars) by vocalizing “1-trip-let, 2-trip-let, 3-trip-let, 4-trip-let”. Next, vocalize the triplets with the middle “trip” syllables silent: “1 let, 2 let, 3 let, 4 let”.
2. Conceive the division of the beat into three equal parts, counting them in 4/4 (four-beat bars) by vocalizing “1-2-3, 1-2-3, 1-2-3, 1-2-3”. Next vocalize the triplets with the middle “2” syllables silent: “1 3, 1 3, 1 3, 1 3”.
3. Once you have an aural concept of the regular swing eighth note rhythm from either or both steps 1 and 2 above, you may be able to use the standard method of vocalizing swing eighths by counting numbers and “ands” with a one-third beat space between them: “1 + 2 + 3 + 4 + (swing)”.

counting regular swing sixteenths ($2/3$ and $1/3$ ratio between each pair of sixteenths)

When counting swing sixteenth pairs (two pairs, making four notes per beat), use one of these methods:

1. Conceive the division of the beat into six equal parts. Count them in 4/4 (four-beat bars) by vocalizing “1 2 3 4 5 6” for each beat. Next, vocalize the six parts per beat with the second and fifth syllables silent: “1 3 4 6”.
2. Once you have an aural concept of the regular swing sixteenth note rhythm from steps 1 (immediately) above, you may be able to use the standard method of vocalizing swing sixteenths by counting “1e+a, 2e+a, 3e+a, 4e+a” with a one-sixth beat space before each “e” and “a”.

TIME SIGNATURES

Music is divided into regular units called bars. In common time, there are four beats to a bar. The top number on a time signature tells you how many beats there are per bar. The bottom number gives you the value in beats for the whole note. The half note gets half as much. The quarter note gets one quarter as much, and so on, in a system of halving. See the halving chart on the next page.

The image displays three musical staves, each representing a different time signature. Below each staff is a sequence of rhythmic counts corresponding to the notes and rests on the staff.

- Staff 1 (4/4):** Shows a sequence of notes and rests. The counts below are: 1 2 3 4, 1 2 3 4, 1 2 3 4, 1 + 2 + 3 + 4 +, 1 e + a 2 e + a 3 e + a 4 e + a.
- Staff 2 (3/4):** Shows a sequence of notes and rests. The counts below are: 1 2 3, 1 2 3, 1 + 2 + 3 +, 1 e + a 2 e + a 3 e + a.
- Staff 3 (6/8):** Shows a sequence of notes and rests. The counts below are: 1 2 3 4 5 6, 1 2 3 4 5 6, 1 2 3 4 5 6, 1 + 2 + 3 + 4 + 5 + 6 +.

RHYTHMIC READING

Halving

<i>name</i>	<i>single</i>	<i>beamed</i>	<i>rest</i>	<i>calculation</i>	<i>x/4 value</i>	<i>x/8 value</i>	<i>x/2 value</i>
whole				all of whole note	4 beats	8 beats	2 beats
half				1/2 of whole note	2 beats	4 beats	1 beat
quarter				1/4 of whole note	1 beat	2 beats	1/2 beat
eighth	 or 			1/8 of whole note	1/2 beat	1 beat	1/4 beat
sixteenth	 or 			1/16 of whole note	1/4 beat	1/2 beat	1/8 beat
thirty-second	 or 			1/32 of whole note	1/8 beat	1/4 beat	1/16 beat

The complete name in each case ends with the word “note”, such as whole note and half note. Two or more notes can be beamed.

Dotting

Dotted notes receive one and one half their value. Think of it as adding half of the value of the note for the dot. All calculations are 1.5 times the whole note.

<i>name</i>	<i>note</i>	<i>rest</i>	<i>x/4 value</i>	<i>x/8 value</i>	<i>x/2 value</i>
dotted whole			6 beats	12 beats	3 beats
dotted half			3 beats	6 beats	1 1/2 beats
dotted quarter			1 1/2 beats	3 beats	3/4 beat
dotted eighth	 or 		3/4 beat	1 1/2 beats	3/8 beat
dotted sixteenth	 or 		3/8 beat	3/4 beat	3/16 beat

Dotted notes can be beamed and secondary beams can be attached to single notes:  .

Double-dotted notes. When notes are followed by two dots, the second dot adds half as much as the first dot added. This comes out to one and three quarters times the note ($\times 1.75$).

name	note	rest	$\times/4$ value	$\times/8$ value	$\times/2$ value
double dotted half			$3 \frac{1}{2}$ beats	7 beats	$1 \frac{3}{4}$ beats
double dotted quarter			$1 \frac{3}{4}$ beats	$3 \frac{1}{2}$ beats	$\frac{7}{8}$ beat

Tuplets

Pulses occur at different rhythmic levels. They occur at the beat level and in subdivisions, where the beat is divided into equal parts. The subdivisions, such as half beats, can be further subdivided, such as half beats into quarter beats.

Typically, notes of equal value in subdivisions of the beat are joined by beams in groups of two, three or four notes. The most common tuplet is the eighth note triplet, where three notes are played in the time of two:

In $\frac{4}{4}$ or $\frac{3}{4}$ time, there are two eighth notes or four sixteenth notes per beat:

compound time signatures

In compound time signatures, such as $\frac{6}{8}$ or $\frac{12}{8}$ time, there is one eighth notes per beat, but they are grouped in twos or threes. In $\frac{6}{8}$ or $\frac{12}{8}$ time, eighth notes are usually joined by beams in groups of three:

changing subdivision

Where a portion of a measure can be subdivided into a number of notes of equal value, tuplets change the subdivision with a bracket or beam and a number indicating a different number of notes in the portion. The number indicates a new number of notes that equally divide the specified portion of the measure.

duplets

This duplet in $\frac{6}{8}$ or $\frac{12}{8}$ time would indicate two notes played in the time of three:

quadruplets

These quadruplets in $\frac{6}{8}$ or $\frac{12}{8}$ time would indicate four notes played in the time of three:

clarified tuplets

A modern convention for tuplets can clarify the new and old number of notes in the subdivision. Since this is rarely used, the notation could include numbers separated by a colon to indicate four notes in the time of three:

irregular durations within a subdivision

A number of notes in a tuplet may be represented by a single note, such as using a quarter note to represent two eighth notes. Notice that a bracket must be used for the irregular durations, but is optional for the complete tuplets (such as the triplets with three eighth notes).

tuplet limits

When the number of notes in the tuplet exceeds twice the number of equal-valued notes in the subdivision, notes of half the value should be used.

Five notes within a beat in $\frac{4}{4}$ would not be indicated with eighth notes, since five is over twice as many as the two eighth notes that would normally constitute one beat:

They would instead be indicated with sixteenth notes:

They could also be clarified by numbers separated with a colon:

Ties

Ties add notes of any time value together. They can be applied to any two consecutive notes of the same pitch.

METERING RHYTHMIC AUDIO MEMORIES

Four Common Activities

A guitarists typically has to multi-task four things: (1) imagine a metronomic beat and its subdivisions, (2) set the melodic or comping rhythm you are playing to that your conceptual metronome, (3) determine the pitches you are playing, usually with your fretting hand and (4) determine the strings you are playing the notes on with your picking and plucking hand.

Count, Vocalize, Audio Memory

Use this three-step process to obtain audio memories: (1) count the rhythm (counting and clapping is a good procedure), (2) vocalize the rhythm, using “ba” for long notes, “bop” notes before a rests, “ah” for sustained pulses and “um” for silent pulses.

In a digital sense, rhythm is generally chosen from a continuous pulse and notes are either “on”, “hold” or “off” decisions for each pulse.

Audio Memories Must Be Accurately Metered

To be able to communicate with other musicians and your listeners, you need to play events accurately placed on a “rhythmic grid” or metronomic pulse that is imagined in common with the other musicians and listeners.

HEARING BEAT SUBDIVISIONS

Humans Can Easily Divide Beats into Two, Three or Four Parts

Humans are very capable of dividing a regular pulse into subdivisions. Non-musicians can immediately divide beats near the pace of walking (80-140 beats per minute) into two, three or four parts. I have demonstrated subdividing to non-musicians over the years and have found that they can mimic what I have done with relative ease.

Common Beat Subdivision

In common time signatures where the *whole note* is defined as four beats (by the bottom number in the time signature), a *quarter note* would get one quarter of four beats: one beat. The symbols for these notes and the ones that follow were shown earlier in [Rhythmic Reading](#).

Dividing beats into two parts (in time signatures with four on the bottom like 3/4 and 4/4) is represented with eighth notes. So, there are two eighth notes per beat. With eighth notes, two or more notes can be joined with a beam (a thick horizontal line) at the end of the note stem; or a flag (a wavy appendage) can extend from each eighth note. Eighth note triplets have three eighth notes embraced with a bracket labeled "3" or have the number "3" above or below the beam joining the three notes. Sixteenth notes would have two flags. Beams or flags have the same effect on the time value.

DEGREES OF SWING

straight versus swing rhythm

Straight rhythm divides the beat into two equal parts. Its sound is typical of rudimentary drumming, the military regimen that, along with African tribal rhythm, has been the basis of jazz rhythm. f

Swing rhythm divides the beat into two parts of variable duration. As a standard practice, swing rhythm divides the beat into a first part of two thirds of a beat and a second part one third of a beat.

There are subtle variations of swing rhythm where the beat can be divided into a long first part in-between one half and three quarters of a beat, giving the second part the remainder. Closer to 50% is called *light swing*, while closer to 75% is called *heavy swing*. Master musicians can interpret and closely match one another's swing percentage and can even "fade" from one approximate percentage to another! Drummer [Chris Stanton demonstrates fading from straight to swing](#) on Youtube.

Apple's Logic Pro X recording software provides six degrees of swing in quantizing: A- 50%, B 54%, C 58%, D 62%, E 66%, F 71%.

Dr. Betotte's metronome software allows setting eighth note swing from 50% (50% for the first part of the beat, 50% for the last part of the beat) variably to 75% (75% for the first part of the beat, 25% for the last part of the beat). For sixteenth swing, Dr. Betotte's metronome allows setting the first and third quarters of the beat each to a single percentage from 50% to 75%, leaving the second and fourth quarters each to the remainder of 100%.

HEARING RHYTHMIC WORDS

Like with verbal language, rhythmic words are the components that make up the musical language of rhythm. The most important three-pulse and four-pulse rhythmic words are shown below.

Basic Three-Pulse Rhythmic Words

eighth triplets and swing eighths

Eighth triplets (labeled “triplet” below) play three notes of equal time per beat. Swing eighths play the first and third notes in a triplet (and sustain through the second one). You could sound swing eighths by speaking “1 um and”, “2 um and”, etc., where the “um” is the unplayed middle part of the triplet.

Notice that the “swing eighths” below are first “written out” in triplets and then shown as eighth notes with the interpretation “swing eighths”, which means the same thing: play the first and third note in the triplet.

Afro-Cuban and waltz

The “Afro-Cuban” selects the first two parts of a triplet. Triplets can be counted “one trip let”, “two trip let” and so on. The “Afro-Cuban” could be represented by speaking “one trip um”, “two trip um”, etc., to represent the unplayed third part of the triplet with “um”.

The “waltz” selects the last two parts of a triplet. In order to still note the numbered beats, you might could the waltz by speaking the number softly, then “trip let” loudly for each beat. The soft number could indicate the un-played note at the beginning of each triplet. The formal meaning of waltz is a European dance song form in 3/4, typically with a bass on beat one and higher-pitched notes or chords on beats two and three. The term is used loosely here to imply selecting the last two parts of a beat.

FOUR-PULSE RHYTHMIC WORDS

“Air Guitar” Strumming while Speaking

Start by moving your hand in the air, in evenly-timed sets of down-up-down-up. The hand should move very regularly like a metronome or pendulum. Speak the selections you intend to make of each set of four. Start by speaking “down-up-down-up”, and “1-2-3-4” alternately. Gradually touch the strings and strum a single chord.

Now repeat the procedure for gallop. Speak the selections you intend to make of each set of four. Start by speaking “down-(miss)-down-up”, and “1-um-3-4” alternately. Gradually touch the strings and strum a single chord. You should be missing the strings on the first “up”, which is “2”.

Clap and Count

the strumming stroke length to three strings, then one string for single-note themes. Players often find it easier to strum all-fretted chords (no open strings) continuously, contacting the strings with every stroke and selecting which pulses will sound by pressing down on the strings with the fretting hand.

After picking a single note theme on one string (muted with your fretting hand) with the same down up directions as when strumming, apply it to the strings you’ll actually be using to play the part. Mute the strings with your fretting hand. So far, you’re not playing the actual pitches, but strumming on the right strings. If you’re reading the tab, learn to interpret the part according to which string numbers each note is written on. The bottom tab line is the largest string, the top one is the smallest string.

Finally, play the actual part, including the fretting. Take care to meter the part, meaning make it as even as if played on selected pulses of a metronome. Metering is especially important where you slur: hammer, pull-off, slide or bend. In those cases, the fretting hand is responsible for part of the rhythm. The hands have to work together to make a rhythm selected from a regular pulse.

All Possible Four-Pulse Rhythmic Words

music notation versions in half beats

The versions shown below in standard music notation are in half beats. Each of these four-pulse rhythmic words are shown in two beats in the music notation, counted “one-and-two-and” (1, +, 2, +).

shown with no rests, except the first division of the beat

For the sake of simplicity, all of these are shown with no rests (silences), unless the rest occurs at the beginning. “2-3-4”, “2-3”, “2-3-4”, “2-3”, “3-4”, “2”, “3” and “4” each start with a rest.

THREE-PULSE RHYTHMIC WORDS

Air Guitar, Count and Clap

See “Air Guitar” Strumming while Speaking and Clap and Count in Four-Pulse Rhythmic words section. The same ideas apply to three-pulse rhythmic words.

All Possible Three-Pulse Rhythmic Words

At slow tempos, these are based on all-down. At fast tempos, these are based on alternating down-up-down ($\downarrow \uparrow \downarrow$) and up-down-up ($\uparrow \downarrow \uparrow$).

nickname →	all three*	swing	afro-cuban	waltz

SIX-PULSE RHYTHMIC WORDS

Three Two-Pulse Words

A quarter note on a beat will be called “whole”. A pair of eighth notes on a beat is “pair”. An eighth rest on the beat and an eighth note on the “and” will be called “and”. A quarter note rest on a beat is “rest”. The graphics express where the notes are played. Un-played parts of the beat may be rests or sustain.

HEARING PICKUPS AND PUSHES

Anticipating the Next Beat

Pickups and pushes both anticipate the next beat by playing something at the end of the previous beat.

pickup

In the example below, think of it as four beats, each divided into four parts, making sixteenth notes in 4/4. The four sixteenth notes on each beat are labeled in the row “sixteenth-note counting”. The fourth division of the second beat, labeled “a”, anticipates the third beat. This is called a *pickup*.

pickup to beat three

strum/pick	↓				↓				↑	↓					↓	
selection	1				2				a	3					4	
full groups of four	1	e	+	a	2	e	+	a	3	e	+	a	4	e	+	a

push

The example below is identical to the one above, except it *doesn't* play on beat three. This is called a *push*. This is often done where a chord is expected to begin on a particular beat (like beat three) and it is played early. Pushes make the music more interesting and contradicts the “tyranny of the bar line”, which can make music too march-like. There is an art to coordinating pushes. See [Comping Strategies](#).

The stroke on the last division *could* be a downstroke, since there are so many un-played pulses. If you replace a downstroke with an upstroke for that reason, you should test your rhythm by selecting from a continuous down-up motion, to make sure you are playing the rhythm correctly (see [air guitar strumming](#)).

push beat three

strum/pick	↓				↓				↑							
selection	1				2				a							
full groups of four	1	e	+	a	2	e	+	a	3	e	+	a	4	e	+	a
chord changes	C7								F7							

Note that the “F7” chord is played “early” on the “a” after “4”. Modern composition has established this push (F7 on the “a” after “4”) associates the chord with the second bar.

You can also read about pickups and pushes in Comping [Rhythm/Varying Rhythm](#).

multiple note pickups and pushes

Pickups commonly involve two or more notes of each value at the end of the previous beat. Here are examples of two-note and three-note pickups and pushes:

original: strumming on beats and and three

	
strum/pick	↓ ↓
selection	1 1

1 e + a

1 e + a 2 e + a 3 e + a 4 e + a

irregular pickups and pushes

Pushes and pickups can also be irregular rhythms, not consecutive pulses. The example of a pickup below occurs on the fifth beat and is the “124” rhythmic word, nicknamed “Creedence”.

irregular three-note pickup to beat one

Detailed description: This section contains musical notation for measures 96 through 118. Each measure is written on a single staff with a treble clef and a key signature of one flat. The notation includes various note values (whole, half, quarter, eighth, dotted half) and rests. Above the staff, rhythmic patterns are labeled with words like 'whole note', 'half notes', 'all four (quarter notes)', 'jingle bells', 'gallop', 'Creedence', 'swing at the bar level', 'Afro Cuban (bar level)', and 'waltz'. Below the staff, numbers 1 through 4 are placed under specific notes or rests, with arrows pointing down to them, indicating a specific rhythmic count or division of the bar.

mixing divided bars and divided beats (dual rhythmic levels)

124 whole note gallop gallop half notes gallop all four

128 Creedence gallop all four Creedence Creedence gallop

Detailed description: This section contains musical notation for measures 124 through 128. The notation is similar to the previous section, with various note values and rests. Above the staff, rhythmic patterns are labeled with words like 'whole note', 'gallop', 'half notes', 'all four', and 'Creedence'. Below the staff, numbers 1 through 4 are placed under specific notes or rests, with arrows pointing down to them. In some measures, there are additional symbols like '+' and '-' between the numbers, indicating a specific rhythmic count or division of the bar.

Varying Rhythm

Learn to elaborate rhythms with pushes and pickups; insertions on “empty” beats (in place of rests); replacing quarter notes with pairs of eighth notes or triplets; omitting ties. Where there is enough space in time, use consecutive syncopations. Learn more in [Rhythmic Themes and Layers](#).

push

When a note or chord is played a half beat early, on the “and” before the numbered beat, it is called a *push*. For example, a chord would be played on the “and after two” (also called the “and after 2”) before three, instead of on “3”, not additionally on “3”.

A “rest push” is played before the beat (usually on the “and”) where there is a silence on the beat it precedes. A “sustain push” is played before the beat (usually on the “and”) and sustains onto the next beat.

accent on 3

push 3

In the “Charleston” example below, the note on the “and” after two pushes the third beat by playing the second note “early” on the and after two. Notice that the beats could be divided evenly with straight eighths or with a two-thirds and one third ratio with swing eighths.

Charleston, Steppin’ Out - (straight eighths)

Charleston, Steppin’ Out *(swing eighths)

pickup

A pickup is similar to a push. They both anticipate the next beat. With the push, you don’t play on the next beat. With the pickup, you *do* play on the next beat. If a chord is played on the “and after 2” and on “3” as well, it would be called a pickup. So a pickup for beat “2” would play on the “and after 1” and also on “2”, while a “push” for beat two would only play on the “and after 1” and not on “2”.

pickup to three

pickup to one

Now we'll play before beat "4", as well as on beat "4" in the example below.

Blues by Five with Pickup To Four (straight eighths)

Blues by Five with Pickup To Four (swing eighths)

add a note on an "empty" beat

In the Charleston example above, there is no note on "4". The "Blues By Five" example below adds a note on "four". Like the Charleston, it is shown both with straight eighths and swing eighths.

Blues by Five (straight eighths)

Blues by Five *(swing eighths)

replacing quarter notes with eighths or triplets

In the clave 3-2 rhythm below, there is a note on the second beat of the second bar.

(son) clave 3-2 (straight eighths)

(son) clave 3-2 (swing eighths)

Now the quarter note (a one beat note) on the second beat of the second bar is replaced with a pair of eighth notes (a half beat each). This makes the "I Shot The Sheriff chorus" rhythm.

I Shot the Sheriff chorus (3-2 clave var.) *(straight) (clave 3-2 straight eighths with pair of eighths on beat 2 of second bar)

I Shot the Sheriff chorus (3-2 clave var.) (swing) (clave 3-2 swing eighths with pair of eighths on beat 2 of second bar)

converting pickups to pushes (tie the offbeat to the next beat)

A pickup and a push both anticipate the target beat. In the “Backbeat, Pickup To Four” example below, there is a pickup to the fourth beat. The note on the “and after three” (the “+” after three) anticipates the note on the fourth beat. Evil Ways, is similar, but does not play a note on beat four. Instead, it sustains the note from the “and after three” immediately before, onto beat four. So, “Backbeat, Pickup To Four” can be converted to “Evil Ways” by playing on the target beat (four), instead of pushing it.

Evil Ways is written below ending with a dotted quarter note, which begins on the “and after three” and sustains through beat four.

Backbeat, pickup To four (straight eighths)

Backbeat, pickup To four (swing eighths)

Evil Ways chorus *(straight eighths)

Evil Ways chorus (swing eighths)

converting pushes to pickups (omit ties)

Remember, a pickup and a push both anticipate the target beat. In the Blues By Five examples below, the push version does not play a note on beat four. Instead, it sustains the note from the “and after three” immediately before, onto beat four. The “pickup to four” version also anticipates beat four, but plays a note on beat four. You could say that the “push four” version was converted to the “pickup to four” version by playing on the target beat (four), instead of pushing it.

A *tie* is a curved line that connects two notes horizontally in music notation to indicate that they sustain continuously, without an attack on the second note. In other words, they functionally become one note. The Blues By Five Push Four rhythm below has ties both on the “and after two” (the “+” after two sustains to the beginning of beat three) and the “and after three” (the “+” after three sustains through beat four).

Blues By Five, push four (straight eighths)

Blues By Five, push four (swing eighths)

By omitting the tie on the “and after three” in the Blues By Five Push Four example, you then play both on the “and after three” and on four, making one note into two (shown earlier). This is shown below.

Blues by Five (straight eighths)

Blues by Five *(swing eighths)

consecutive syncopations

Syncopation is the most significant rhythmic attribute than African music added to American music. It involves playing on the normally unaccented part of the beat, such as on the “and” or upbeat instead of on the downbeat (numbered beat). Syncopation is a modern (nineteenth century and forward) and “cool” stylization. The Brown-Eyed Girl intro. example below makes this variation on the Charleston rhythm.

“push groups” with three or four notes

This concept is useful to conceive complex rhythms. Three eighth notes on “and-four-and” or on “and-two-and” can function to push beat one or three respectively, likewise preceded by a rest or sustain.

Four-pulse rhythmic words with three or four notes than include the fourth pulse are “all four” (1-2-3-4), gallop (1-3-4), Creedence (1-2-4) and “2-3-4”. They can occur at the eighth note level on beats three and four in 4/4 to push beat one, or on beats one and two to push beat three. See [Four-Pulse Rhythmic words/All Possible Four-Pulse Rhythmic Words](#).

They must be preceded by a rest or sustain or in many cases by pitches that separate them melodically, by being based on another chord or in a different range of pitch.

sixteenth triplet pickups

The following musical notation shows sixteenth note triplet pickups in 4/4 time, with a tempo of 80 beats per minute. The notation is organized into seven systems, each with a measure number and a descriptive label. The notes are in treble clef, and the key signature is one flat (Bb). The pickup patterns are indicated by brackets and the number 3. Fingerings are indicated by arrows (up for upstroke, down for downstroke).

Straight Eighths

The musical notation is written on a single staff in 12/8 time. It begins with a whole rest for the first measure. The second measure is a repeat sign followed by a quarter note G4, an eighth note A4, and a quarter note B4. The third measure consists of a quarter note G4, an eighth note A4, and a quarter note B4. The fourth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The fifth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The sixth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The seventh measure is a quarter note G4, an eighth note A4, and a quarter note B4. The eighth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The ninth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The tenth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The eleventh measure is a quarter note G4, an eighth note A4, and a quarter note B4. The twelfth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The thirteenth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The fourteenth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The fifteenth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The sixteenth measure is a quarter note G4, an eighth note A4, and a quarter note B4. The notation is repeated four times, as indicated by the 'play 4 times' instruction.

BUILDING MELODIC RHYTHMS

The goal is to hear the rhythm aurally as a musical idea. If necessary, go through the step-by-step process of building your ability to play the rhythm on four notes with a metronome playing four pulses per beat: strum chord, pick on one note, play arpeggio; then do the the same with iReal Pro or a backing track.

don't combine rhythmic words that cause more than two consecutive unplayed pulses

To retain the energy in up-tempo styles like swing blues and bebop, play notes more continuously. Avoid skipping more than two consecutive pulses. This means, for example, that you would not use the four-pulse word “1”, because it ends with three consecutive unplayed pulses. Nor should you use the four-pulse word “4”, because it begins with three consecutive unplayed pulses

Building Four-Pulse Melodic Rhythms with Driving Energy

Using two [four-pulse rhythmic words](#), build rhythms for continuous eight-pulse settings. Typical settings are two 4/4 bars of eighth note pulses or two x/4 beats of sixteenth-note pulses. See [All Possible Four-Pulse Rhythmic Words](#).

three of four plus one of four

Combine one four-pulse rhythm with three notes (Jingle Bells, gallop, Creedence or “234” each choose three of four pulses) with the one-note rhythm “2” or “3” four-pulse rhythm (“2” or “3” each choose one of four pulses). To make the rhythm more continuous, don't use the four-pulse rhythms “1” or “4”, since they each have the undesired three consecutive pulses not played.

two of four plus two of four

Combine two the four-pulse rhythms than choose two of four pulses. To avoid more than three consecutive unplayed pulses, don't follow “12” with “23” or with “34”. Likewise, don't follow “23” with “34”.

Building Three-Pulse Melodic Rhythms with Driving Energy

Using two [three-pulse rhythmic words](#), build rhythms for continuous six-pulse settings (two triplets, part of which may be rests or sustain). Typical settings are two 3/4 bars of eighth note pulses or one beat of sixteenth-note triplet pulses. See [Three-Pulse Rhythmic Words](#).

pairs of three-pulse rhythmic words that avoid more than two consecutive unplayed pulses

The following combinations preserve driving energy. 123-1, 123-2, 123-3, 12-12, 12-13, 12-23, 13-12, 13-13, 13-23, 23-12, 23-23, 1-123, 2-123-3-123.

Five-Note Rhythms - [play video](#)

This page displays 49 five-note rhythmic patterns, numbered 1 through 49, arranged in ten staves. The notation is in 2/4 time, using eighth and sixteenth notes, rests, and triplet markings. The patterns are as follows:

- Staff 1: Patterns 1-4. Each consists of two eighth notes, a quarter note, and two eighth notes, with various triplet markings.
- Staff 2: Patterns 5-8. Pattern 5 has a quarter rest followed by eighth notes. Pattern 6 has a quarter note followed by eighth notes. Pattern 7 has a quarter note followed by eighth notes. Pattern 8 has a quarter note followed by eighth notes.
- Staff 3: Patterns 9-12. Pattern 9 has eighth notes. Pattern 10 has eighth notes. Pattern 11 has eighth notes. Pattern 12 has eighth notes.
- Staff 4: Patterns 13-16. Pattern 13 has eighth notes. Pattern 14 has eighth notes. Pattern 15 has eighth notes. Pattern 16 has eighth notes.
- Staff 5: Patterns 17-20. Pattern 17 has eighth notes. Pattern 18 has eighth notes. Pattern 19 has eighth notes. Pattern 20 has eighth notes.
- Staff 6: Patterns 21-24. Pattern 21 has eighth notes. Pattern 22 has eighth notes. Pattern 23 has eighth notes. Pattern 24 has eighth notes.
- Staff 7: Patterns 25-28. Pattern 25 has eighth notes. Pattern 26 has eighth notes. Pattern 27 has eighth notes. Pattern 28 has eighth notes.
- Staff 8: Patterns 29-32. Pattern 29 has eighth notes. Pattern 30 has eighth notes. Pattern 31 has eighth notes. Pattern 32 has eighth notes.
- Staff 9: Patterns 33-36. Pattern 33 has eighth notes. Pattern 34 has eighth notes. Pattern 35 has eighth notes. Pattern 36 has eighth notes.
- Staff 10: Patterns 37-40. Pattern 37 has eighth notes. Pattern 38 has eighth notes. Pattern 39 has eighth notes. Pattern 40 has eighth notes.
- Staff 11: Patterns 41-44. Pattern 41 has eighth notes. Pattern 42 has eighth notes. Pattern 43 has eighth notes. Pattern 44 has eighth notes.
- Staff 12: Patterns 45-49. Pattern 45 has eighth notes. Pattern 46 has eighth notes. Pattern 47 has eighth notes. Pattern 48 has eighth notes. Pattern 49 has eighth notes.

Six-Note Rhythms in Eighth Triplets - play [video 1](#) [video 2](#) [video 3](#)

This musical score consists of 48 measures of music, organized into 12 staves of 4 measures each. The notation is in treble clef. Measures 1 through 32 are in 4/4 time, while measures 33 through 48 are in 3/4 time. The music features eighth-note triplets, indicated by a '3' and a bracket under the notes. Measure numbers 1 through 48 are printed above the corresponding measures. The score includes various rhythmic patterns using eighth notes and eighth-note triplets, with some measures containing rests or specific articulation marks like accents.

Measures 49-72: Six-note rhythms in sixteenth notes. The notation is in treble clef with a key signature of one sharp (F#). Measures 49-52 show a sequence of sixteenth notes with triplet markings (3). Measures 53-56 continue the sequence. Measures 57-60 show a variation with eighth notes. Measures 61-64 show a variation with eighth notes and triplet markings. Measures 65-68 show a variation with eighth notes and triplet markings. Measures 69-72 show a variation with eighth notes and triplet markings, ending with a double bar line.

Six-Note Rhythms In Sixteenth Notes - [play video](#)

Measures 2-28: Six-note rhythms in sixteenth notes. The notation is in treble clef with a key signature of one sharp (F#). Measures 2-5 show a sequence of sixteenth notes. Measures 6-9 show a variation with eighth notes. Measures 10-13 show a variation with eighth notes and triplet markings. Measures 14-17 show a variation with eighth notes and triplet markings. Measures 18-21 show a variation with eighth notes and triplet markings. Measures 22-25 show a variation with eighth notes and triplet markings. Measures 26-28 show a variation with eighth notes and triplet markings, ending with a double bar line.

Seven-Note Rhythms - [play video](#)

This musical score presents 40 measures of rhythmic exercises in treble clef. The notation is organized into ten systems of four measures each. Measures 1 through 4 are in 2/4 time, while measures 5 through 40 are in 3/4 time. The exercises are composed of eighth and sixteenth notes, often grouped into triplets. Measure numbers 1 through 40 are printed above the corresponding measures. The score concludes with a double bar line at the end of measure 40.

Swing Eighthths
on the beat

Measures 1-12 are grouped into three systems. Each system contains a treble clef staff and a guitar TAB staff. The first system (measures 1-4) shows a melodic line with eighth-note triplets and a TAB line with corresponding fret numbers (7, 5, 7, 5). The second system (measures 5-8) continues the melodic line with eighth-note triplets and a TAB line with fret numbers (5, 6, 5, 7, 5). The third system (measures 9-12) shows a melodic line with eighth-note triplets and a TAB line with fret numbers (5, 6, 5, 3, 5, 3). The notation includes repeat signs and slurs over the eighth-note triplets.

off the beat

Measures 13-24 are grouped into three systems. Each system contains a treble clef staff and a guitar TAB staff. The first system (measures 13-16) shows a melodic line with eighth-note triplets and a TAB line with fret numbers (8, 10, 8). The second system (measures 17-20) shows a melodic line with eighth-note triplets and a TAB line with fret numbers (7, 8, 7, 5). The third system (measures 21-24) shows a melodic line with eighth-note triplets and a TAB line with fret numbers (7, 8, 7, 5). The notation includes repeat signs and slurs over the eighth-note triplets. The text "as a pickup" is written above the melodic line in measures 15 and 19.

STRENGTHEN YOUR MEMORY OF FRETBOARD NOTE NAMES

Open String Note Names

Use this memory device to memorize the open string note names: from sixth (largest string) to first string (smallest), the sequence created by the first letter of each word in this sentence below shows the open string note names.

Eat A Darn Good Breakfast Early

Open Position Natural Notes

open position natural notes on the three bass strings

A seven-letter alphabet is used in music, in a repeating cycle: A-B-C-D-E-F-G-A-B-C. etc. As you can see on the diagram above, the alphabetical pairs of letters A-B, C-D, F-G on the the same string each make a two -fret interval. The alphabetical pairs “B to C” and “E to F” are each a one fret interval. Where the musical alphabet starts over, G-A is an exception and is also a two-fret interval.

Since the sixth string open is “E” (fret zero), “F” would be one fret above it on the sixth string first fret. “G” would follow two frets above “F”, on the third fret. The fifth string open is “A” (fret zero). “B” would be two frets above it on the fifth string, second fret. “C” would follow one fret above “B” on the third fret. The fourth string open is “D” (fret zero). “E” would be two frets above it on the fourth string second fret. “F” would follow one fret above “E” on the third fret.

all open position natural notes

Starting with the sixth (largest) string, open “E”, ascend from the sixth string to the first (smallest) string, playing three notes on each string, except only two notes on the third string. After playing each open string, calculate the location of the next two letters, using the rule that each alphabetical pair is two frets apart, except the pairs B-C and E-F are one fret apart. Remember the exception: only play two

notes on the third string. You should have achieved the result shown below in standard music notation and tab.

A-B-C-D-E-F At the Fifth Position

As a group, the open position notes A-B-C on the fifth string and D-E-F on the fourth string duplicate on the sixth and fifth string at the fifth fret. See the diagrams to the right.

Natural Notes On The Two Bass Strings

Once you have memorized the open position note names on the two bass strings and “A-B-C-D-E-F” at the fifth position, all that remains is the tenth and twelfth frets. The twelfth fret note names are the same as each open string. The tenth fret on each string is one letter lower in the alphabet than the letter name for the twelfth fret.

Frets with All Natural Notes

The open strings, fifth fret, tenth fret and twelfth fret have natural notes on every string. Next to the diagram at the right, sentences are shown to help memorize those notes. The set of first letters of each of the words names the natural notes from sixth (largest) string to first string.

Octaves

You can also find notes by referencing a note you know on one of the bass strings and locating its octave on a smaller string. The five octave shapes are shown in the second row below. The letters name the shape, but may be placed on any letter. The first row shows the origin of each octave shape in the roots of an open position chord. Explore the diagram above (Frets with All Natural Notes) to confirm that each note is related to others by octave shapes.

USING MULTIPLE PERSPECTIVES TO READ

Learning to read music notation with multiple perspectives will make you more capable. Being able to recognize letter names, intervals, patterns on scales, and so on can all make you a faster reader. Use your auditory memory of the melody (if any) to check the notes after you have used other criteria to decide where to play them. The perspectives include:

- Learn to identify intervals on the staff by [odd and even-numbered intervals](#), then specific intervals.
- Relate each note to scale tone “1” of the parent major scale (the major scale on which the melody is based). See [Key Scales, Parent Scales & Chord Scales/Key Scale, Chord Scale and Parent Scale](#).
- Identify consecutive scale tones, or sequences of every-other scale tone.
- In Note Sets, Structures and Design, study [Intervals and Formulas](#). Learn the unique interval fingerings: five unique octave fingerings; four unique fingerings for fourths and augmented fourths; eight unique fingerings for fifths and diminished fifths; six unique fingerings for major and minor thirds; six unique fingerings for major and minor sevenths.
- Relate each note in the piece of music to the next by interval.
- Practice visualizing on the staff, the parent major scale in intervals in this order: stepwise, octaves, fourths, fifths, thirds, sixths, then sevenths.
- Prepare to identify chord tones in the melody by learning [chord-naming conventions](#) and the theory of chord construction (see [All Scale-Tone Chords](#)).
- When the melody is played over a chord progression, learn many chord fingerings and a complete arpeggio for each chord in the fretboard area of the parent major scale. See [Triad Arpeggio Exercises/Triad Chord and Arpeggio Fingering](#) and see [Prime Scales, Chords and Arpeggios](#) (all of the sections with “Arpeggio” in the title).
- Learn melodic [theme and variation](#), so when it occurs in a melody you can learn to modify the fingering for one instance of a theme to another instance as directed by the melody.
- Learn [The Chord Serial Number System](#) in [Chord Archetypes](#), so you can quickly get the tones of a chord in mind.
- Learn principles of [voice leading](#), so you can predict the movement of voices in multi-voiced music.
- Learn the melodic and harmonic devices used in the piece of music, so you can predict melodic lines. See [Melodic Cells](#) and [Voice Leading](#).

Visualize every note you read: Read and play a phrase a few times until you memorize it. Focus on the mechanical event of fretting each note in sequence first, then the rhythm. Learn the melodic rhythm early enough that you don’t memorize an incorrect rhythm. Look away from the sheet music. Re-play

the phrase and in the process visualize it written on the staff. Then visualize playing the written phrase without a guitar, without reading.

A phrase is usually about eight to twenty notes, separated by pauses. If there are no pauses, group the notes into phrases of 8 to 20 notes by bars or by the chord progression.

CHOOSE A SCALE FINGERING

Most musical parts can be related to one or more major scales. Since most of the notes of a each section of a piece of music you read musical part are usually contained in a single major scale, knowing the major scale fingering in the range of the musical part you are reading is very helpful.

For the major scale, there are three archetypal one-octave fingerings, seven in-position fingerings and seven three-note-per-string fingerings.

Three Archetypal One-Octave Major Scale Fingerings

All in-position and three-note-per-string major scale fingerings are based on these three. The three archetypes are shown below in the key of A major (with three sharps: F#, C# and G#), with the three orientations regarding which finger is on the low octave tone center ("A" in this case): index finger, middle finger and little finger. Get used to the idea of keys having flats or sharps. Most keys do have flats or sharps.

index finger middle finger little finger

fingers → 1 2 4 1 2 4 1 2 2 4 1 2 4 1 3 4 4 1 3 4 1 3 4 1

numbered major scale tones → 1 2 3 4 5 6 7 1 1 2 3 4 5 6 7 1 1 2 3 4 5 6 7 1

compensation for the flat-tuned first and second strings

The two smallest strings on the guitar are tuned relatively one fret lower than the other strings. Each string is a perfect fourth (equal to five frets, non-inclusively) higher in pitch than the next larger string, except the second string. The relationship between the third and second string is unique. They are tuned a major third (four frets, non-inclusively) apart.

The instances of each of the three archetypal octave fingerings are shown below, where they have been moved to different string sets. Notice the "skewing" of the pattern where notes on the first two strings are fretted relatively one fret higher to compensate for the fact that the first two strings are tuned one fret lower than the other strings.

seven three-note-per-string major scale fingering patterns for guitar

These are often useful alternatives to the in-position fingerings for fast linear playing.

--	--	--	--	--	--	--

Assess The Range and Choose a Fingering

assessing the range in a piece a music

Find the highest and lowest notes in a piece of music. They span the range. Define the location of the lowest note in relation to middle "C". The choices include: in the octave below middle C, "middle C" (itself), "in the first octave above middle C", "in the second octave above middle C" and "in the third octave above middle C". Then conceive the range from that note to the highest note. Is the span over an octave? Is the span over two octaves?

staff location terminology

Its good to have universally understood terms to describe the location of a note on the staff to others, or in thinking it to yourself. Use the terms on the staff below. Since they are the same for any clef, no clef sign was shown at the left of the staff below.

treble clef note identification by octave

bass clef note identification by octave

determine the major scale on which the melody is based

At first, you can just use the major scale indicated by the key signature (see the separate chapter on key signatures). Once you are more advanced in music analysis, you can more discretely determine the relationship to major scales.

determine the major scale-tone number for the lowest and highest note

Each note in the major scale can be given a number. The note that names the major scale is numbered “1”, the next note above it is numbered “2”, and so on, numbering the seven notes of the scale in ascending order. The eighth note can be numbered “1” again, since it would have the same letter name as “1”.

define the lower note and describe the relationship to the upper note

Define the lowest note in the piece of music in the terms shown above. Describe relationship of the highest note in the piece to the lowest note in the piece in terms of being in the same octave (before the same numbered tone reoccurs), in the first octave higher or in the second octave higher.

choose an easy major scale fingering that accommodates the necessary range...

Using the [Full-Fretboard Treble Clef Note Names](#) chart (or your memory of it), determine which major scale fingering(s) would accommodate that range and choose the fingering with the fewest reaches (and the most duplication of pattern on adjacent strings). There are enlarged view on the two pages following the main chart.

progressive order of major scale fingerings by comfort

Melodies are usually based on major scales, alterations of them or subsets of them. The most comfortable major scale fingerings are contained within a range of four consecutive frets. Fingerings that require reaching to a fifth fret are less comfortable to play. It is also easier to fret a scale that has duplicate fingerings on adjacent strings, which requires less thought.

The easiest major scale fingerings are 3 and 7, since they have no “reaches”. “Body” reaches reach out of position with the pinky. “Head” reaches reach out of position with the index finger. Fingering 6 has one body reach. Fingerings 2 has two body reaches. Fingering 4 has two head reaches. Fingering 1 has three head reaches. Fingering 5 has four head reaches.

fingering 1	fingering 2	fingering 3	fingering 4	fingering 5	fingering 6	fingering 7
3 index reaches	2 pinky reaches	no reaches	2 index reaches	4 index reaches	1 pinky reach	no reaches

The longer in-position major scale fingerings are not well-suited for scalar patterns, but are more useful in creating harmonic structures. In playing a scale where there are duplicate notes on strings two and three, play either note (not both).

override reach ability by other considerations

The considerations of fret space width, tone, frequent occurrence of a “reached” note or accessible arpeggios can override the choice of a major scale fingering by range.

Fret space width. Playing too high (toward the guitar body), where the fret spaces are very small, will be less comfortable. Likewise, playing too low on the fretboard (toward the head of the guitar), where the fret spaces are very large, will be less comfortable.

Tone. You may choose a position closer to the head of the guitar for more treble tone or closer to the body of the guitar for more bass tone. Subtle considerations of one or more notes being on a plain string for brighter tone or on a wrapped string for more bassy tone may come into play.

Frequent occurrence of one or more “reached” notes (those that are not within the comfortable range of four consecutive frets) may cause preference for another fingering without that issue.

Accessible arpeggios. Look for arpeggios that are structurally part of the melody and consider their ease of fingering as subsets of the major scale fingering you choose.

Treble Clef Note Names - "the Body End of the Fretboard"

The diagram illustrates the treble clef notes for frets 10 through 24, organized into six columns. Each fret is represented by a staff with six notes. The notes are labeled with their names (e.g., D, G, C, F, A, D for fret 10) and their corresponding pitch classes (e.g., D, G, C, F, A, D for fret 10). The diagram is organized into six columns, each representing a different pitch class across the fretboard.

Fret	Column 1	Column 2	Column 3	Column 4	Column 5	Column 6

ODD AND EVEN INTERVALS ON THE STAFF

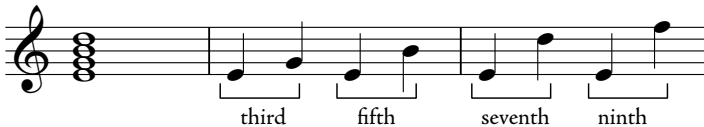

Recognizing intervals by their appearance on the staff is very helpful in speed reading, paired with your knowledge of fingered intervals on the fretboard. See Note Sets, Structures and Design/[Intervals and Formulas](#).

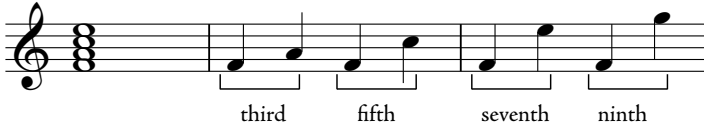

If the oval head of a note has a staff line (or ledger line) going through it horizontally, it is said to be on a line. If the oval head is between two staff lines (or ledger lines), it is said to be on a space. If a note is immediately above ("sitting on top of") a ledger line above the staff, it is on a space. If a note is immediately below ("hanging from") a ledger line drawn below the staff, it is on a space.

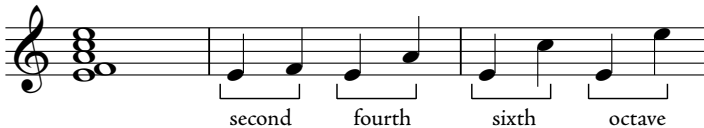

If two consecutive notes are both on the lines or both on the spaces, they are an odd-numbered interval. If one is on a line and one is on a space, they are an even-numbered interval. I refer to notes both on lines or both on spaces as being on the *same staff element*. When one is on a space and one on a line, they are on *different staff elements*.

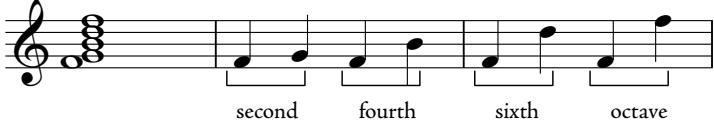

Once you have determined whether notes are odd-numbered or even-numbered intervals, it is easy to identify the interval at a glance. Odd-numbered intervals are thirds, fifths, sevenths or ninths. Think of them as small (thirds), medium (fifths), large (sevenths) or huge (ninths). Even-numbered intervals are seconds (small), fourths (medium), sixths (large) or octaves (huge).

judging intervals by size

odd-numbered intervals → 

odd-numbered intervals → 

even-numbered intervals → 

even-numbered intervals → 

odd-numbered and even-numbered intervals involving ledger lines

Ledger lines imply the same categories as staff lines. Imagine the ledger lines continuing above a note drawn on top of a ledger line or below a note drawn below a ledger line (such as the highest note and the lowest note in the example below). Then you'll be able to conceive such a note as "on a space".

The image shows three musical staves, each with a treble clef and a key signature of one flat (Bb). The first staff is labeled "odd-numbered intervals" and shows a sequence of notes: C4 (below the first ledger line), E4 (first space), G4 (second space), Bb4 (second space), D5 (third space), F5 (third space), Ab5 (third space), and C6 (above the fourth ledger line). Brackets below the staff indicate intervals of a third, fifth, seventh, and ninth. The second staff is also labeled "odd-numbered intervals" and shows a sequence of notes: C4 (below the first ledger line), E4 (first space), G4 (second space), Bb4 (second space), D5 (third space), F5 (third space), Ab5 (third space), and C6 (above the fourth ledger line). Brackets below the staff indicate intervals of a third, fifth, seventh, and ninth. The third staff is labeled "even-numbered intervals" and shows a sequence of notes: C4 (below the first ledger line), D4 (below the first ledger line), E4 (first space), F4 (first space), G4 (second space), Ab4 (second space), Bb4 (second space), and C5 (third space). Brackets below the staff indicate intervals of a second, fourth, sixth, and octave.

be ready for change

The most common consecutive intervals are seconds (which make seven-tone scales like the major scale) and thirds (the primary structure of chords). When reading a consecutive interval passage, be on the lookout for a change of interval, such as a change from seconds (stepwise) to a third, then a fourth. Changes of interval especially happen when going up and down the arpeggiated notes of a chord.

VISUALIZE INTERVALS WITHIN A FINGERING

Visualize each written note as you play each of the seven in-position octaves, fourths, fifths, sixths, then sevenths. Play each note of the scale in the two or three octaves in which it occurs. Play the scale in thirds, fourths, fifths and sixths. Fourth has the simplest structure to memorize, sixth the most difficult. Playing a scale in each of these intervals is described below.

playing scales in octaves

In each major scale fingering, play each numbered tone and its one or two reoccurrences in the next octave or two. Notes on the sixth string occur in two octaves higher (making three notes in all). In in-position major scale fingerings, notes on the sixth string are mirrored by notes on the first string two octaves higher with the same name on the same fret.

playing scales in fourths

In each major scale fingering, ascend scale-tone numbers 1-4; 2-5; 3-6; 4-7; 5-1; 6-2; 7-3 (repeat). Then descend scale-tone numbers 1-5; 7-4; 6-3; 5-2; 4-1; 3-7; 2-6; (repeat).

playing scales in fifths

In each major scale fingering, ascend scale-tone numbers 1-5; 2-6; 3-7; 4-1; 5-2; 6-3; 7-4 (repeat). Then descend scale-tone numbers 1-4; 7-3; 6-2; 5-1; 4-7; 3-6; 2-5; (repeat).

playing scales in thirds

In each major scale fingering, ascend scale-tone numbers 1-3; 2-4; 3-5; 4-6; 5-7; 6-1; 7-2 (repeat). Then descend scale-tone numbers 1-6; 7-5; 6-4; 5-3; 4-2; 3-1; 2-7; (repeat).

playing scales in sixths

In each major scale fingering, ascend scale-tone numbers 1,6; 2,7; 3,1; 4,2; 5,3; 6,4; 7,5 (repeat). Then descend scale-tone numbers 1,3; 7,2; 6,1; 5,7; 4,6; 3,5; 2,4 (repeat).

playing scales in sevenths

In each major scale fingering, ascend scale-tone numbers 1-7; 2-1; 3-2; 4-4; 5-4; 6-5; 7-6; (repeat). Then descend scale-tone numbers 1-2; 7-1; 6-7; 5-6; 4-5; 3-4; 2-3; (repeat).

Chord Progression by Number

If you don't know the letter names on the fretboard, study the earlier chapter [Memorizing Fretboard Letter Names](#).

BASIC BARRE AND POWER CHORDS

barre chords

With barre chords, a finger is laid across multiple strings on the same fret. The chords below are named after the root shown with the bold circle on the sixth or fifth string. With the sixth string root, there is a major and a minor chord. With the fifth string root, there is a major and a minor chord.

power chords

Power chords sound strong and primal. They are the root of the chord (the note with the letter name that names the chord) and the fifth of a major scale named after the chord root. An "A" power chord includes the note "A" and the fifth step of the A major scale, "E". The root of the power chord is commonly doubled an octave higher, so an "A" power chord would have notes in ascending order "A-E-A". The symbol for a power chord is the letter name followed by an Arabic "5", such as "A5".

If you are not yet able to fret the barre chords shown above, use the power chords below instead. You will use a single power chord to represent a major or minor chord with its root on the fifth string and another power chord to represent a major or minor chord with its root on the fifth string.

for either of these:

use either of these:

use either of these:

ROMAN NUMERALS

Combinations of the letters “I”, “V” and “X” are used in Roman numerals to represent the numbers one through forty-nine (fifty is “L”). The system is shown below, up to the number 24, generally the highest number needed for guitar notation.

Roman	Arabic
I	1
II	2
III	3

“V” is “5”. Subtract one (“I”) on the left for “4”: IV. Add one, two or three on the right for “6, 7, 8”: VI, VII, VIII.

IV	4
V	5
VI	6
VII	7
VIII	8

“X” is “10”. Subtract one (“I”) on the left for “9”: IX.

IX	9
X	10

For 11 through 19, add to the right of X (10):

XI	11	(X+I, is 10+1)
XII	12	(X+II, is 10+2)
XIII	13	(X+III is 10+3)
XIV	14	(X+IV is 10+4)
XV	15	(X+V is 10+5)
XVI	16	(X+VI is 10+6)
XVII	17	(X+VII is 10+7)
XVIII	18	(X+VIII is 10+8)
XIX	19	(X+IX is 10+9)

“XX” is “20” (two tens). 19 is X (10) plus IX (9): XIX. For 21 through 24, add to the right of XX (20):

XX	20	
XXI	21	(XX+I, is 10+1)
XXII	22	(XX+II, is 10+2)
XXIII	23	(XX+III is 10+3)
XXIV	24	(XX+IV is 10+4)

fret numbers and chord roots

Two things in guitar music are indicated with Roman numerals, positions and chord progression. Positions are indicated with a Roman numeral to the upper right of a chord diagram (below). In that case, the Roman numeral indicates the top fret on the diagram. So, the top fret of the “D” chord below is the fifth fret (also showing the third finger barre the seventh fret on strings four, three and two).

Roman numerals are used to indicate the numbered step of the major scale after which a chord is named. If the first step of the major scale is an “A” note, a “I” chord would be an A chord. Sound complicated? Don’t worry we’ll take it step by step.

I	II	III	IV	V	VI	VII
1	2	3	4	5	6	7

The diagram of major scale tones below is *movable*. Whatever note “1” is placed on names the major scale. If the top fret on the diagram (with “1” on the first and sixth strings) is placed at the fifth fret, the diagram would represent the “A” major scale. At the third fret, it would be “G” major.

TWO "I-IV-V" ROOT CONFIGURATIONS

A chord root is the note after which a chord is named. "I-IV-V" will be used as points of reference to build other progressions. "I, IV and V" are each major chords. On the tall diagram labeled "movable", the number "1" can be assigned on *any* note. Imagine the "1" on the sixth string on "A", for example, at the fifth fret. The "2" on the sixth string would then be the seventh fret. The two most important I-IV-V root configurations are:

key of A

key of A

key of C

key of C

I

IV

V

key of D

key of A

I-IV-V with root on the sixth string

The roots are shown below with the bold circle on the sixth or fifth string. Begin with the root of “I” on the sixth string, then move to “IV” rooted on the fifth string at the same fret. Finally, move up two frets toward the body of the guitar to place the “V” root on the fifth string also.

I-IV-V with root on the fifth string

The roots are shown below with the bold circle on the sixth or fifth string. Begin with the root of “I” on the fifth string, then move two frets toward the head of the guitar to place the “IV” root on the sixth string. Finally, move up two frets toward the body of the guitar to place the “V” root on the sixth string also.

Prepare for Songs by Determining I-IV-V First

If you know what I, IV and V are for a key, each of the other numbered scale steps are only one scale step away from I, IV or V. That makes it easy to determine any other scale step.

With the sequence of perfect fourths (five fret intervals, inclusively) you can determine IV for any key. For whatever is “I”, “IV” is the next letter in the perfect fourth series.

perfect fourths

The perfect fourth sequence is the letter sequence B-E-A-D-G-C-F (“bead” go catch fish) three times, first with sharps, then naturals (no sharps nor flats), then with flats.

B#-E#-A#-D#-G#-C#-F#-B-E-A-D-G-C-F-Bb-Eb-Ab-Db-Gb-Cb-Gb

Use them to figure out I-IV-V for any key. Whatever “I” is, “IV” is the letter in the fourths sequence. Then “V” is the next letter alphabetically (not in the fourths sequence). IV to V should be a two fret interval, inclusively. You’ll sometimes need to apply a sharp or flat to make sure IV to V is two frets.

THE MAJOR SCALE ON ONE STRING BY NUMBER

In numbered order, each note in the major scale is two frets apart from the next, except “3” to “4” and “7” to “1” are one fret apart. As you can see below, this is true on any string. “1” may be located at any fret.

VI MINOR, II MINOR AND III MINOR CHORDS

For VI_m, the root is two frets toward the guitar body from V

key of A

movable

fixed

key of D

Using I, IV and V as points of reference, you can locate the three minor chords constructed on major scale tones VI, II and III (6, 2, and 3).

locating VI_m chords using I, IV and V as points of reference, VI_m is above V or below I. II_m and III_m are above I and below IV:

To locate the root of a VI_m chord ("six minor"), do one of the following (roman numerals refer to the numbered tone of the major scale after with the chord is named):

- go up two frets up (toward the body of the guitar) from V to VI_m (see the previous page)
- go three frets down (toward the head of the guitar) from I to VI_m (one fret from I down to VII, plus two frets from VII down to VI)

key of E

key of A

To locate the root of a II^m chord, do one of the following (roman numerals refer to the numbered tone of the major scale after with the chord is named):

- go up two frets up (toward the body of the guitar) from I to II^m
- go three frets down (toward the head of the guitar) from IV to II^m (one fret from IV down to III, plus two frets from III down to II)

To locate the root of a III^m chord, do one of the following (roman numerals refer to the numbered tone of the major scale after with the chord is named):

- go up one fret down (toward the body of the guitar) from IV to III^m
- go four frets up (toward the body of the guitar) from I to III^m (two frets from I up to II, plus two frets from II up to III)

IVV	1 3 3 3 3 3
IV	1 1 1 1 1 1

The musical score for "The Sound of Silence" by Simon & Garfunkel is presented in standard notation. The guitar staff (top) includes chord names (G, D, Em, C) and fret numbers (3, 5, 7, 8, 5, 3). The bass staff (bottom) includes fret numbers (3, 5, 7, 7, 7, 7, 8, 9, 7, 5, 3, 5). The score is divided into measures by vertical bar lines, with repeat signs at the beginning and end. The guitar staff has a key signature of one sharp (F#) and a 4/4 time signature. The bass staff has a key signature of one sharp (F#) and a 4/4 time signature. The score is divided into measures by vertical bar lines, with repeat signs at the beginning and end. The guitar staff has a key signature of one sharp (F#) and a 4/4 time signature. The bass staff has a key signature of one sharp (F#) and a 4/4 time signature.

[illegible]

Basic Chord Construction

- **Chord Roots**
- **Two and Three Note Chords (Diad And Triads)**
- **Triad Types**
- **Major Scale-Tone Tertian Triads**
- **Open-Position Triads from Major Scales**
- **Making Major Chords Movable**

CHORD ROOTS

A chord root is the letter name for a chord. The letter may be followed by a flat or sharp which alters the letter. Sharps (“C#” is “C sharp”) indicate a note is one fret higher (toward the guitar body). Flats indicate a note is one fret lower (“Db” is “D flat”). Naturals (“C” is “C natural”) cancel previously indicated sharps or flats and bring a note back to its unaltered pitch.

TWO AND THREE-NOTE CHORDS

Chords are combinations of two or more notes played at once.

Diads or Intervals: Two-Note Chords

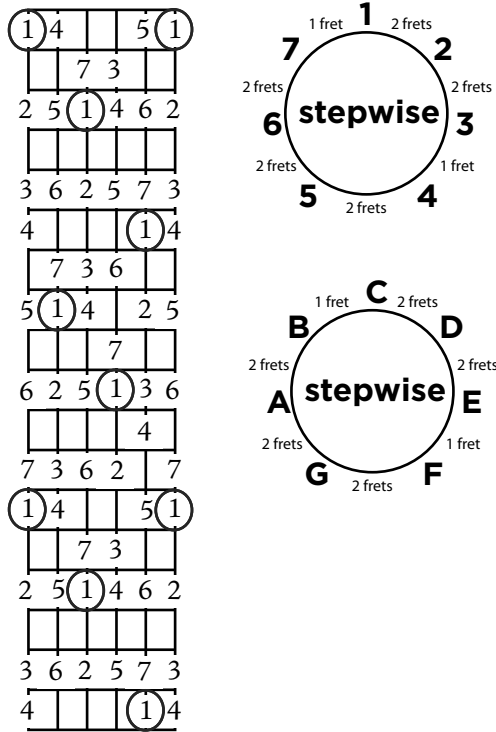

Two note chords are called *diads*. Two notes played at once are commonly named as intervals, such as the combination of the notes C and E (“E” above “C”) being called a third (since it is three tones in the C major scale from “C” up to “E” inclusively). There are no formal names for diads as chords, so we use interval names.

Triads: Three-Note chords

Three-note chords are called *triads*. Any note of a triad may be repeated in the chord, so a triad may be played as a five note chord with three different notes, repeating two of the notes. As a standard practice, triads are constructed with every-other scale tone, each using some version of numbered tones “1”, “3” and “5”. To work with chord construction, you need to memorize the cycle of numbers and letters from which chords are commonly built, called *thirds*.

Major scale intervals are the same from numbered step to step in every key. In stepwise (numerical) order, they are:

Three to four and seven to one are one fret apart. B to C and E to F are one fret apart. In the C major scale, with no sharps or flats, these correspond. Three to four is one fret and, in C, three to four are E to F, which is one fret. Likewise, seven to one is B to C in the C major scale and B to C is one fret. C major therefore requires no sharps nor flats. All other keys require sharps or flats to adjust the step to step letter pattern so three to four and seven to one are each one fret.

Here is the major scale fret spacing for a few keys. Inspect the adjustments that have been made to conform to the major scale spacing of one fret intervals (called *half steps* or *semi-tones*) between steps three and four and between seven and one. The key signature system provides a method of memorizing these adjustments for all keys.

TRIAD TYPES

Most triads use the numbered tones 1, 3 and 5. Some have alterations to three or five, such as flat three. Suspended triads are the exception, using “1, 4, 5” or “1, 2, 5”. Memorize the numbered tones that each triad name implies, as shown on the list below:

<u>triad name</u>	<u>abbreviation</u>	<u>numbered tones of a major scale on the chord root</u>
major	(nothing)	1, 3, 5
minor	m or min.	1, b3, 5
diminished	dim. or °	1, b3 b5
augmented	aug. or +	1, 3, #5
suspended fourth	sus. 4 or sus.	1, 4, 5
suspended second	sus. 2	1, 2, 5

When a chord quality is not specified, it is assumed to be major. That is, when a chord name is shown as just the letter name (A, Bb, B, C, C, etc.), the chord is major.

An indication of a suspended chord without a number (Csus) should be interpreted as a suspended fourth chord. It is clearer to the reader if you elaborate the chord name to specify, using “sus.4” for a suspended fourth chord (Csus4) or “sus2” for a suspended second chord (Csus2).

Avoid using the degree symbol (°) for a diminished triad. The degree symbol (°) is commonly used to represent a diminished seventh chord. So, when you write a diminished seventh chord, it will be more universally understood if you include the “7”, writing “°7” for a diminished seventh chord.

MAJOR SCALE-TONE TERTIAN TRIADS

Triads are three note chords. Tertian chords are constructed as a standard practice using every-other-note of a seven-tone scale. Tertian triads use three consecutive notes from the major scale-tone cycle of thirds above.

If the tall diagram at the left illustrates the F major scale, where the top fret is the first fret. The extractions from it below show the three-note chords made from it. They are F major scale-tone triads. See the chapter [Major Scale-Tone Triads](#).

The intervals derived from the I major chord (1-3-5), the IV major chord (4-6-1) and the V major chord (5-7-2) are the same, which is why they are all called major. Each of them has an interval pattern of two steps, one and a half steps. (four frets, then three frets). Inspect this on a vertical string on the full-fretboard diagram at the left.

The intervals derived from the VI minor chord (6-1-3), the II minor chord (2-4-6) and the III minor chord (3-5-7) are the same, which is why they are all called minor. Each of them has an interval pattern of one and a half steps, two steps (three frets, then four frets). Inspect this on a vertical string on the full-fretboard diagram at the left.

The intervals in the VII diminished chord are unique: one and a half steps twice (3 frets, 3 frets). To demonstrate these intervals to yourself, play a major scale up and down a single string and number the scale tones. Inspect this on a vertical string on the full-fretboard diagram at the left.

OPEN-POSITION TRIADS FROM MAJOR SCALES

Review the [Octave Shapes](#) section in [Note Sets, Structures and Design](#).

For each of the major scales below, a chord is shown that contains major scale tones one, three and five. Each of these chords is named after the major scale.

MAKING MAJOR CHORDS MOVABLE

Three-Finger Versions of Open-Position Major Chords

The three-finger versions of open-position major chords are modified below, so the first finger is free to make a barre chord. The first finger will act as a “virtual nut” to make the chord movable and change it to any other key.

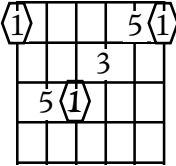

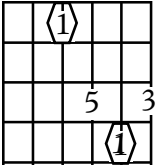

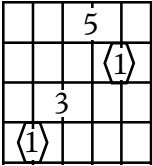

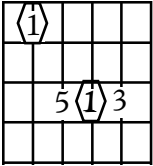

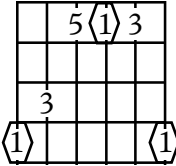

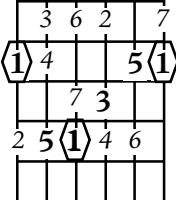

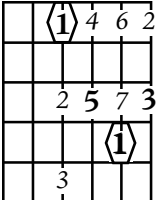

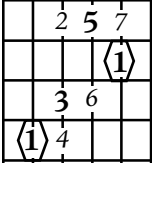

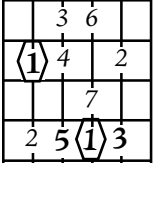

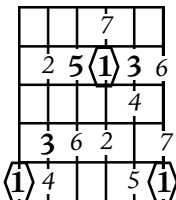

Movable Versions of Open-Position Major Chords

These can be played at any fret. Each chord is named after the note in the hexagon. Usually, you would use the lowest-pitched note as a point of reference (the hexagon on the largest string available). In the “E” shape diagram, you would use the sixth string note as a point of reference. In the “D” shape diagram, you would use the fourth string note as a reference, and so on.

Constructing Major Chords from Movable Major Scales

To construct a major chord from a major scale, number the tones of a major scale and play combinations of scale tones “1, 3, and 5”. Notice that the “scale numbers” shown in each major chord diagram below are a subset of the major scale fingerings shown below the chord diagrams.

E shape	D shape	C shape	A shape	G shape
major chord scale numbers	major chord scale numbers	major chord scale numbers	major chord scale numbers	major chord scale numbers
				
major scale scale numbers	major scale scale numbers	major scale scale numbers	major scale scale numbers	major scale scale numbers
				

If you're wondering how to play the major scales shown above, they are shown in the key of G major, below.

"G" major scale in five octave shapes

The tablature notes in hexagons can be played together to form G major chords.

G major scale in "E" shape

G major scale in "D" shape

G major scale in "C" shape

G major scale in "A" shape

Playing in Position

- **Strict Vertical Position**
- **Two Categories of Octave Shapes**
- **Any Key Within Three Consecutive Positions**
- **Hey Joe or Day in the Life in Five Octave Shapes**
- **Identifying an Octave Shape in a Position**
- **In-Position Major Scale Fingerings**
- **Converting Major Chords to Minor Chords**

STRICT VERTICAL POSITION

This concept is primarily used for single-note playing of melodies, scales and arpeggios; not for chords. The rules of strict vertical position specify which finger would be used to fret each of thirty-six note locations on the fretboard through a range of six frets on all six strings.

fifth position

Position is numbered after the fret at which your index finger is placed. In that position, the other three fingers are assigned one of the next three frets in-a-row toward the body of the guitar. In other words, each of the four fingers are assigned to one of four consecutive frets.

The examples below show the first string. The position numbers would be the same, regardless of which string the fingers were placed upon.

fifth position

sixth position

seventh position

You can also reach one fret out-of-position with the index and little fingers:

fifth position

sixth position

seventh position

head reach and body reach

A head reach is a reach out of position toward the head of the guitar with the index finger, shown above where the index finger is used twice on the same string. A body reach is a reach out of position toward the body of the guitar with the little finger, shown above where the little finger is used twice on the same string.

side step

A *side step* is a temporary change of position before returning to the original position. It usually involves notes in the temporary position on only one or two strings. In fingering six of C major scale below, most of the scale is fingered in fifth position (with the index finger at the fifth fret), but there is a side step where the notes on the third string are fingered in fourth position. In fingering two of C major scale below, most of the scale is fingered in tenth position (with the index finger at the tenth fret), but there is a side step where the notes on the fourth and third string are fingered in ninth tenth position.

Example 1

Example 2

Example 3

Example 1: eleventh position. Example 2: third position. Example 3: second OR third position. :srawsun

TWO CATEGORIES OF OCTAVE SHAPES

Octave shapes can be placed in two categories: those with the low octave root fretted by the index finger and those with the low octave root fretted by the ring or little finger. These could be called *open-string-origin octave shapes* and *fretted-origin octave shapes*.

The octave shapes whose low-octave root is fretted with the index finger originated with a chord whose low-octave root was an open string. Those are the E shape, A shape and D shape.

The octave shapes whose low-octave root is fretted with the ring or little finger originated with a chord whose low-octave root was a note on the third fret. Those are the G shape and C shape.

Open-String-Origin Octave Shape - Back Slash

The index finger is closest to the low octave tone center. The “forward slash” shape occurs in the lower octave of the E shapes and is the only “slash” version of the A and C shapes.

Fretted-Origin Octave Shape - Forward Slash

The little finger is closest to the low octave tone center. The “forward slash” shape occurs in the lower octave of the G shape and is the only “slash” version of the C shape.

ANY KEY WITHIN THREE CONSECUTIVE POSITIONS

A primary goal on the fretboard is to be able to play in all keys in a small area or one key everywhere.

When a chord has a long duration, you have the opportunity to improvise in a wide range of pitch on the fretboard. When you are improvising on chords of short duration, you need to be able to play in a small area, since you don't have time to move around. When you voice chords to represent a chord progression, you usually make small, conservative movements (for good voice leading) and would tend to play in a small area of the fretboard.

finger assignment in three consecutive positions

The standard basis for fretting single note melody is that in each position, each finger is assigned to one of four consecutive frets. In more advanced definitions of positions for single note guitar parts (as opposed to chords), the index and little fingers can reach one fret out of position, but we won't do that here.

Positions IV, V and VI are shown as an example of three consecutive positions below. If the fifth position was the original position you considered, the fourth position represents the position one fret toward the head of the guitar from the original position and the sixth position represents the position one fret toward the body of the guitar from the original (fifth) position.

octave shapes with the bass note fretted with the index or little finger

Most octave shapes have their lowest-pitched note fretted with the index or little fingers. One of them is oriented to the ring finger. First look at all of the notes in positions IV, V and VI fretted with only the index and little fingers.

the bass note of "C" octave shape is fretted with the ring finger

The only octave shape that has its lowest-pitched note fretting with the ring finger is the "C" shape. It occurs when you consider the added position one fret toward the head of the guitar from the original position you considered.

all twelve notes within the range of three positions

Any of the twelve different notes can be assigned to an octave shape within the range of three consecutive positions. Consider the note names in IV, V and VI positions.

twelve unique bass notes of octave shapes in a single position

In a given position, you can reach the bass note of an octave shape for every key. These are the twelve bass notes representing all keys for the fifth position. Every other note is a duplicate.

V	V
VII	VII
IX	IX

considering a position

When you consider playing in any particular position, you should include the positions up one fret (toward the guitar body) and down one fret (toward the head of the guitar). Then the octave shape is available for all twelve notes. You will learn how the following octave shapes are determined and how they are assigned to fingers.

G# / Ab is in D shape

"HEY JOE" OR "DAY IN THE LIFE" IN FIVE OCTAVE SHAPES

Play this chord progression is C-G-D-A-E-E-E-E, one bar each chord. This is a great way to memorize major chord fingerings for each of the five octave shapes.

	E shape	D shape	C shape	A shape	G shape
<i>major chord</i>					
<i>Hey Joe</i> "E" is "D" shape					
<i>Hey Joe</i> "E" is "C" shape					
<i>Hey Joe</i> "E" is "A" shape					
<i>Hey Joe</i> "E" is "G" shape					
<i>Hey Joe</i> "E" is "E" shape					

IDENTIFYING AN OCTAVE SHAPE IN A POSITION

For most chords, think in terms of the low octave root. Choose a starting position. You will consider that position and the positions up a fret (toward the gutiar body) and down a fret (toward the head of the guitar). Within the range of those positions, these octave shapes are available:

the letters below indicate

OCTAVE SHAPES, NOT NOTE NAMES

From the original chosen position, if the index finger is nearest the chosen note, use the “E”, “A”, or “D” shape, depending on the string. The “E” shape is on the sixth string, “A” shape on the fifth string and “D” shape on the fourth string. If the little finger is nearest the chosen note, use the “G” or “C” shape. The “G” shape is on the sixth string and the “C” shape is on the fifth string.

IN-POSITION MAJOR SCALE FINGERINGS

Reference Major Scale Fingerings

seven in-position fingerings, numbered by scale tones

Major scale fingerings are numbered in this course according to the number of lowest note fingered with the index finger on the sixth string. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the an alternate string. Head-reach (index) options are generally preferred for scale and melody, while body-reach (pinky) options are preferred for arpeggios.

fingering 1 3 index reaches	fingering 2 2 pinky reaches	fingering 3 no reaches	fingering 4 2 index reaches	fingering 5 4 index reaches	fingering 6 1 pinky reach	fingering 7 no reaches

in-position major scale fingerings by finger number

“1” is the index finger, “2” is the middle finger, “3” is the ring finger and “4” is the little finger. Head-reach (index) options are generally preferred for scale and melody, while body-reach (pinky) options are preferred for arpeggios.

fingering 1 3 index reaches	fingering 2 2 pinky reaches	fingering 3 no reaches	fingering 4 2 index reaches	fingering 5 4 index reaches	fingering 6 1 pinky reach	fingering 7 no reaches

Major scale fingerings can also be conceived in all twelve positions for any particular key, as shown below.

Root ID Versions of Major Scales in Twelve Positions

twelve in-position fingerings, numbered by scale tones and by formula

In this **root ID** naming system, the first number indicates the string where the lowest-octave tone center is located. The second number indicates the fretting hand finger that frets the tone center. 1 = index, 2 = middle, 3 = ring and 4 = little finger. "L" is shown after the number "1" when the index finger reaches one fret toward the head of the guitar for the low-octave tone center ("L" to indicate low pitch). A note in parenthesis indicates an optional location to fret a note on an adjacent string.

This is the most discreet system of positions for the major scale.

<p>6-1</p>	<p>6-1L</p>	<p>4-1</p>	<p>4-1L</p>	<p>5-4</p>	<p>5-3</p>
<p>1 1 1 1</p>	<p>1 1 1 1</p>	<p>1 1 1 1</p>	<p>1 1 1 1</p>	<p>1 1 1 1</p>	<p>1 1 1 1</p>
<p>5-2</p>	<p>5-1</p>	<p>5-1L</p>	<p>6-4</p>	<p>6-3</p>	<p>6-2</p>
<p>1 1 1 1</p>	<p>1 1 1 1</p>	<p>1 1 1 1</p>	<p>1 1 1 1</p>	<p>1 1 1 1</p>	<p>1 1 1 1</p>

CONVERTING MAJOR CHORDS TO MINOR CHORDS

Each major chord is constructed with numbered tones “1,” “3” and “5” of a major scale named after the chord. A major scale is shown below for major chords in each of the five shapes. Notice that the numbered tones in each chord diagram are the major scale tones (not fingers) extracted from the major scale fingering above it. Converting the “E,” “A” and “D” shape major chords to minor is straightforward. Flat the “3” in each major chord.

minor pentatonic					

WHAT IS A PENTATONIC SCALE?

Common Pentatonic Scales

Pentatonic scales have five tones per octave (not counting the octave). The most common forms are the minor and major pentatonic. Specific names for these scales are minor 7/11 pentatonic and major 6/9 pentatonic, where the scales have been named after the chords which would have the same name.

Chord Roots

A chord root is the note after which a chord is named. It is the letter which begins the chord name and any sharp or flat that may immediately follow it. "B" is the root of a Bm7b5 chord. "Bb" (B flat) is the root of a Bbm7b5 chord ("B" flat minor seventh flat five). "F" is the root of a Fma7b5 chord ("F" major seventh flat five). "F#" is the root of an F#ma7b5 chord.

Aurally (in terms of sound), a chord root can also be thought of as the lowest note a listener can imagine during the playing of a chord. If the listener is experienced in recognizing chord inversions (where notes other than the root may be the lowest pitch), they should imagine in terms of root position, where the root is in the bass.

Scale Tone Centers

A tone center is the note after which a scale is named. A classic example of a scale would play the notes consecutively up or down for one octave (eight notes with a major scale), beginning and ending on the tone center.

Chord and Scale Formulas

A formula expresses the notes of a chord or scale in relation to a major scale based on the chords root or the scales tone center. For example, a major chord is combines major scale tones 1, 3 and 5.

G major scale in "C" shape

fingers VII

		1	
		(2)	
	3		
(4)			

1 3 5 1
(scale tones)

scale tones VII

	2	5	7
		(1)	
	3	6	
(1)	4		

fingers: 4 1 3 4 1 3 1 2

scale tones: 1 2 3 4 5 6 7 1

A formula may indicate altered tones of the major scale. A flat symbol (b) placed before any number in a formula indicates a note one half step lower than that numbered tone (one fret toward the head of the guitar). A sharp symbol (#) placed before any number in a formula indicates a note one half step higher than that numbered tone (one fret toward the body of the guitar). “b3” (flat three) would indicate a note one half step lower than scale tone “3”. “#4” (sharp four) would indicate a note one half step higher than scale tone “4”.

Major Six Nine Pentatonic Scale

The major 6/9 pentatonic scale has the same notes as a major 6/9 chord. The name may be abbreviated as “6/9”, since chord names that don’t specify the triad quality are assumed to be major. C6/9 is C major six nine, while Cm6/9 is C minor six nine. The major 6/9 chord is a major chord with an added sixth and ninth. In a chord, a ninth is the same note as the second, but “nine” implies it is in a higher range of pitch.

The formula for the major 6/9 pentatonic scale is 1-2-3-5-6. That is, a major 6/9 is made up of the first, second, third, fifth and sixth tones of a scale named after the chord root. Those tones of a C major 6/9 pentatonic scale are C, D, E, G and A.

Major 6/9 pentatonic works melodically with most major type chords, but is usually most effective when used against major, sixth or add nine chords (major, 6th, add 9, 6/9).

Minor Seven Eleven Pentatonic Scale

The minor 7/11 chord is a minor seventh chord with an added eleventh. The formula for a minor 7/11 chord is 1-b3-4-5-b7. So, a minor 7/11 chord is made up of the first, flatted third, fourth, fifth and flatted seventh tones of a scale named after the chord root. Those tones (or altered tones) of an A major scale are A, C, D, E and G. The flatted third and flatted seventh each lower the original scale tone by one fret .

Minor 7/11 pentatonic is the most fundamental and common scale in blues music. Major 6/9 is common to American styles of Anglo-Saxon origin, such as bluegrass, ragtime and country music.

Both minor 7/11 and major 6/9 pentatonic scales can be enhanced with the use of chromatics, as shown in a later chapter.

Major 6/9 pentatonic works melodically with most major type chords, but is usually most effective when used against major, sixth or add nine chords (major, 6th, add 9, 6/9).

Minor 7/11 pentatonic works with most minor type chords and/or in a minor key. It is most harmonious with minor seventh types (m7, m9, m11, m7/11). It can also be used against major type chords and/or in a major key, producing a bluesy effect by contrasting the minor scale sound against the major chord or key sound.

RELATIVE MAJOR AND MINOR PENTATONIC

A tone center names the key of a song, scale or melody. A “B” minor pentatonic scale has the tone center “B”. A melody in the key of “D” major has the tone center “D”.

Minor pentatonic tone centers are indicated below with the rectangle (\square). Major pentatonic tone centers are indicated with the hexagon (\hexagon). Notice that when the major and minor tone centers are on the same string, the major tone center is three frets above the minor tone center (three frets toward the body of the guitar). In the same octave shape, the major pentatonic fingering number is one *higher* than the minor for the same tone center.

	fingering 1	fingering 2	fingering 3	fingering 4	fingering 5
<i>pentatonic scale</i>					
<i>minor chord</i>					
<i>major chord</i>					

In these three pentatonic scale fingerings, the major tone center (\hexagon) is three frets above the minor tone center (\square) on the same string.

	fingering 1	fingering 2	fingering 4
<i>pentatonic scale</i>			

Notice also that in pentatonic scale fingering 2 (below), the major tone center (◻) is on the fourth and sixth strings: its on the fourth string to show its relationship to the minor tone center (◻) and on the sixth string to show the lowest octave of the “E” form octave of which it is a part.

In pentatonic scale fingerings 3 and 5 (below), the major tone center (◻) is two frets below the minor tone center on the next smaller string (◻).

Can you identify the minor and major tone centers and play the related minor and major chords for each of these?

DEVICES TO MEMORIZE PENTATONIC FINGERINGS

Octave Pentatonics

This is the best place to start, since you can play melodic themes which usually are contained within one octave. It shows the similarities between the six string fingering patterns.

Pentatonic Lines

By visualizing the full-fretboard pentatonic scale pattern, it can be conceived in terms of “lines” of notes that are mostly on a single fret for each line. Deviations from notes being on the same fret are referred to with terms such as “second string high” where all of the notes are on the same fret except a note on the second string is one fret closer to the body of the guitar.

Pentatonic Master Pattern

Ascend (sixth to first strings) two three fret intervals, three two-fret intervals, move one fret toward the head of the guitar to start over. A more detailed description is shown a few pages later.

Major Tone Center Diagonal

At the point where the major third interval occurs in ascending. This is shown at the end of the Pentatonic Lines discussion and within the pentatonic master pattern discussion that follows.

Relative Major And Minor

By memorizing the relative major and minor chords for each pentatonic scale fingering, and thinking of the composite of all their notes, you can “trigger” your memory of the pentatonic scale fingering in which they are contained.

Same Type Pentatonic Up A Fourth Or Fifth

When the same type of pentatonic scale (minor or major) is used up a fourth or fifth at the same fret only one note changes per octave and it changes by one fret.

Recognize the changed note as the necessary one to include all notes of the changed chord (since all notes of the chord have to be in the scale). Remember to change the note in all octaves.

Pentatonic Scales In Fourths, Fifths And Octaves

Play the scale in fourths (with one major third above the major tone center), in fifths (with one minor sixth) and octaves. These intervals are generally effective when played in single note parts, but the fourths (with one major third) are also effective played simultaneously as two-note chords.

OCTAVE PENTATONICS

The Arabic numbers 1, 2, 3 and 4 on these diagrams indicate fretting hand fingers. "1" is the index finger, "2" is the middle finger, "3" is the ring finger and "4" is the little finger.

backslash and forward slash octaves

An octave is a span of eight notes in a major scale. There are two archetypal octave shapes on which all other octave fingerings are based:

For each of these angles, you will need to memorize a minor pentatonic scale and a major pentatonic scale. A tone center is the note after which a pentatonic scale is named. "F#" (F sharp) minor pentatonic has the tone center "F#" (F sharp). A rectangle () will be used to designate a minor pentatonic tone center and a circle () will be used to designate a major pentatonic tone center.

flat tuning of the smallest two strings

On the fifth fret of each string on the guitar, the pitch is the same as the next smaller string open, *except* the third string fourth fret is the same pitch as the second string open. This causes the pitch of the first two strings (the two smallest strings) to be relatively low by an interval of one fret (a half step).

Therefore, any intervals (such as octaves) that are originally conceived on the four larger strings must be compensated when they include either of the two smallest strings by fretting any note on the first or second (two smallest strings) one fret toward the body of the guitar.

the four instances of the backslash octave

the three instances of the forward slash octave

the four configurations combining octave angle, minor and major

Look for these four configurations on the next page:

backslash minor pentatonic octaves**backslash major pentatonic octaves****forward slash minor pentatonic octaves****forward slash major pentatonic octaves**

archetypes common to four-string fingering patterns

These four-string patterns are parts of six string pentatonic scale fingerings 1 and 5. The “3-2-2-2” fingering pattern has an interval of three frets on the sixth string and two frets on the fifth, fourth and third strings. The “2-2-3-3” fingering pattern has an interval of two frets on the sixth and fifth strings and an interval of three frets on the fourth and third strings.

Backslash minor and forward slash major octave pentatonics are common to the “3-2-2-2” fingering. Forward slash minor and backslash major octave pentatonics are common to the “2-2-3-3” fingering.

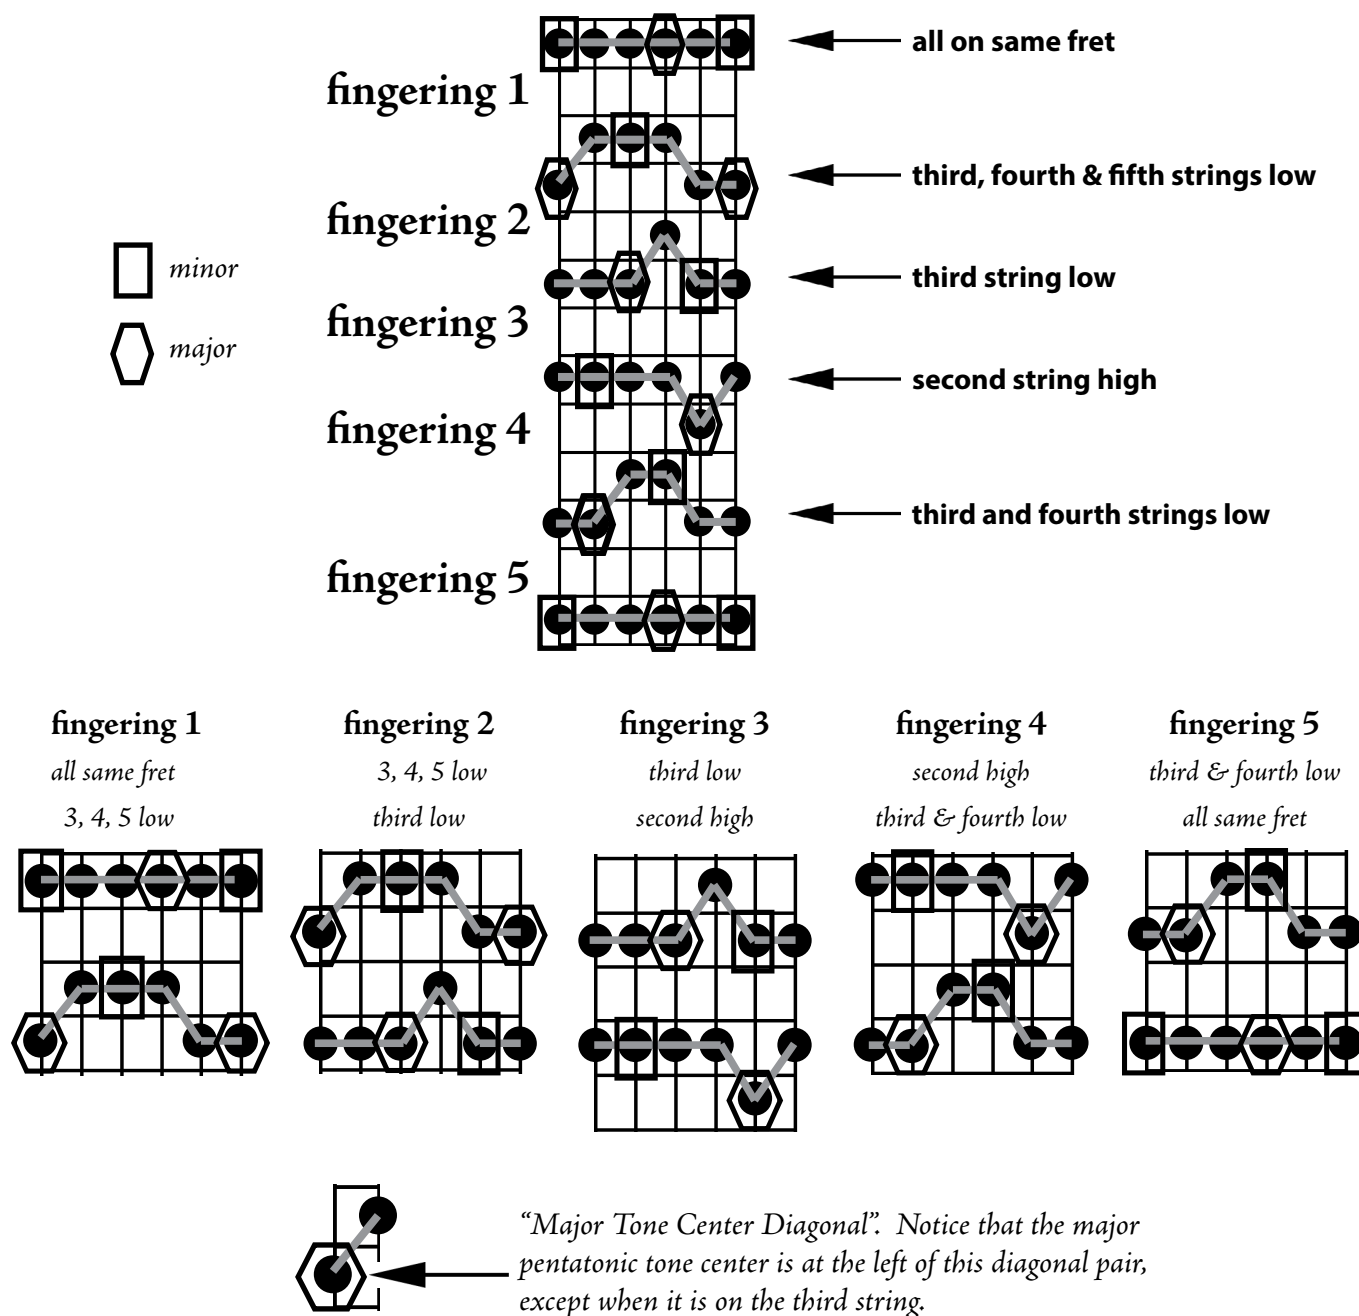

six-string pentatonic fingerings

PENTATONIC LINES

The common pentatonic scale, used for minor and major pentatonic can be conceived in lines to aid recollection of the five fingerings. The five unique lines are identified in the movable full-fretboard at the right of the diagram below.

The lines are depicted in relation to notes all on the same fret by noting exceptions where some of the notes are one fret low (toward the head of the guitar) or high (toward the guitar body). “Low one five, four, three” indicates the notes on the third, fourth and fifth strings are one fret “low” in relation to the other notes on that line. The rectangles are minor tone centers and the hexagons are major tone centers.

THE PENTATONIC MASTER PATTERNS

Also see Master Pentonic and Major Scale Patterns/The Master Pentatonic Scale Pattern.

The number of strings in a master pattern for a note set is usually the same as the number of notes in the note set. A five-note (pentatonic) scale, usually has five notes in its master pattern. *The master pattern needs to be modified before applying it to the guitar.* The master pattern for the common major and minor pentatonic scale reads left to right as *two three-fret intervals, then three two-fret intervals*:

two adjustments need to be made to apply this pattern to the guitar

1. The smallest two strings are tuned flat in relation to the other strings. Any notes on string one and two (the two smallest strings) need to be moved up one fret, toward the body of the guitar. Relative to the other strings, these strings are tuned one fret (a half step) low in pitch.
2. When the master pattern repeats, it reoccurs one fret toward the head of the guitar.

imagine the master pattern on infinite strings and infinite frets

Each time the pattern re-occurs, it is shifted, one fret toward the head of the guitar (which is up on the diagram). View any set of six consecutive strings (six consecutive vertical lines) on the infinite string and fret grid above. Imagine the last two strings on the right shifted one fret toward the body of the guitar, which is down on the diagram. Each set of six strings with the right two “dropped” will produce one of the five pentatonic scale fingerings.

Extracting Pentatonic Fingerings from the Pentatonic Master Pattern

Each hexagon () is the major pentatonic tone center (or the flatted third of the minor pentatonic). The and a diagonal line at the upper right of each hexagon connects it to the beginning of the next pentatonic master pattern.

Each of the five common pentatonic scale fingerings below are extracted from the conceptual “infinite string and infinite fret” fretboard. In each fingering, the notes on the two smallest strings (the far right of each diagram below) are moved one fret toward the guitar body, which is down on the diagram. This

compensation is caused by the nature of the “flat-tuned” two smallest strings on the guitar. (strings one and two are tuned a half step (one fret) flat in relation to the other strings.

Constructing Each Penatonic Scale Fingering from the Pentatonic Master Pattern

pentatonic fingering one

Pentatonic fingering one ascends to the right on the diagram, reading left to right, by string number:

string 6 - the last of the two three-fret intervals

strings 5, 4 and 3 - three two-fret intervals

string 2 -the master pattern starts over where it would move one fret toward the head of the guitar but, since it is string 2, the compensation is cancelled out since flat-tuned strings require moving one fret toward the body of the guitar.

string 1 - plays the last of the two three fret intervals

pentatonic fingering two

Pentatonic fingering two ascends to the right on the diagram, reading left to right, by string number:

string 6 - the last of the three two-fret intervals

strings 5 - moves one fret toward the head of the guitar to re-start the master pattern with a three fret interval

string 4 -the last of the two three fret intervals

strings 3, 2 and 1 are the three two-fret intervals, but the pattern must move one fret toward the body of the guitar on strings 2 and 1, to compensate for them being flat-tuned.

pentatonic fingering three

Pentatonic fingering three ascends to the right on the diagram, reading left to right, by string number:

string 6, 5 and 4 - the three two-fret intervals

strings 3 - moves one fret toward the head of the guitar to re-start the master pattern with a three fret interval

string 2 - the last of the two three fret intervals must move one fret toward the body of the guitar to compensate for the flat-tuned second string

string 1 - the first of the three two-fret intervals

pentatonic fingering four

Pentatonic Fingering four ascends to the right on the diagram, reading left to right, by string number:

string 6 and 5 - the two three-fret intervals

strings 4, 3 and 2 - three two fret intervals, moving one fret toward the body of the guitar to compensate for the the flat-tuned second string

string 1 - the pattern starts over, moving one fret toward the head of the guitar

pentatonic fingering five

Pentatonic Fingering four ascends to the right on the diagram, reading left to right, by string number:

string 6 and 5 - the last two of the three two-fret intervals

strings 4 and 3 - the two three-fret intervals, beginning one fret toward the guitar body, since the pentatonic master pattern is starting over.

string two and one - the first two of the three two-fret intervals, beginning one fret toward the guitar body to compensate for the the flat-tuned second string

LITTLE WING STUDY

For each chord in this progression, play the chord, then the matching pentatonic scale shown below it. This is a very effective preparation for full-fretboard improvisation. First learn to play in each of the five octave shape areas for the key of “Em” shown below. Then, combine adjacent areas for each chord. With this purpose in mind, the octave shapes are shown in order, moving up the fretboard. The “D” shape example on the next page could also be played twelve frets higher, so it is adjacent to the “E” shape octave area shown below.

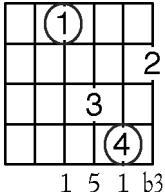

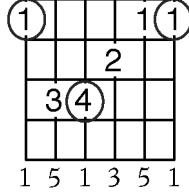

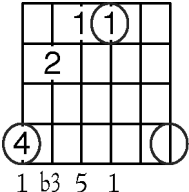

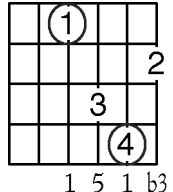

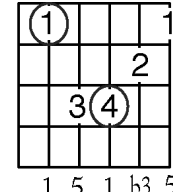

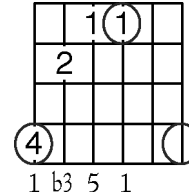

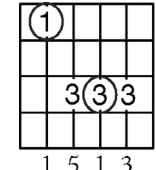

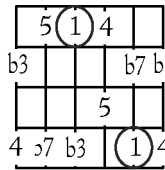

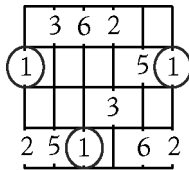

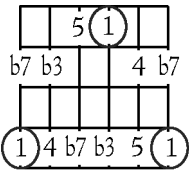

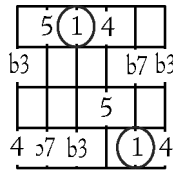

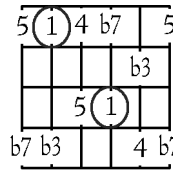

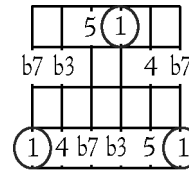

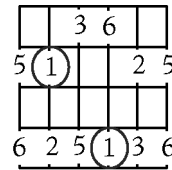

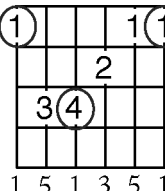

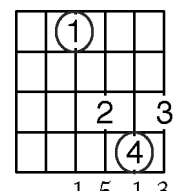

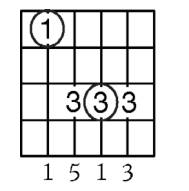

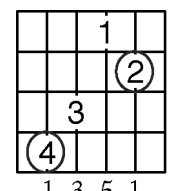

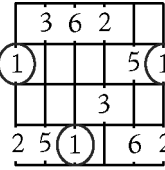

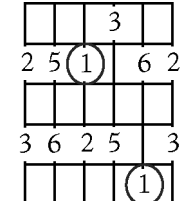

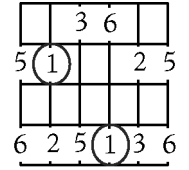

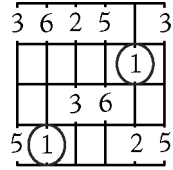

The chord progression is: ||: 4/4: Em | G | Am | Em | Bm | Am C | G F | 2/4 C | 4/4 D | D :|| Em
Most of the bars are 4/4, four beats each bar. Where two chords occur in the same bar, they are two beats each. Notice the 2/4 bar of only two beats.

key of Em, with “E” in the “E” shape octave

the pentatonic scale fingerings are shown in the verse chord progression below each chord with the same name

* **F#7/11 pentatonic (F# dominant 7/11 pentatonic) = 1-3-4-5-b7**

Use minor pentatonic, changing only the finger necessary for the b3. The changed note is the relative major tone center, being moved up 1 fret (so the former minor pentatonic has a b3).

Blues Rock Cells and Swing Blues Cells

- **Melodic Cells Defined**
- **Open E Minor Pentatonic Cells**
- **Minor Pentatonic Blues Rock Cells**
- **Major Pentatonic Swing Blues Cells**
- **Blues Rock Cell Development Exercises**

MELODIC CELLS DEFINED

Cells are the smallest units of melodic design. They are made with structures like scales, arpeggios, intervals and chromatics. Cells usually are used with various expressive design elements involving technique, phrasing, rhythm, dynamics, etc. Melody is the designed repetition of cells.

See the chapter [Melodic Cells](#).

Swing Eighths

Staff notation: Treble clef, key of E minor (one sharp), 4/4 time. The melody consists of eighth notes and triplets. The fretboard diagram shows fingerings for the T, A, and B strings across five measures.

Fretboard diagram (T, A, B strings):

- Measure 1: T (2), A (4), B (4)
- Measure 2: T (5), A (5), B (3)
- Measure 3: T (5), A (3), B (0)
- Measure 4: T (5), A (4), B (3)
- Measure 5: T (0), A (2), B (2)

E minor XII position

Staff notation: Treble clef, key of E minor (one sharp), 4/4 time. The melody consists of eighth notes and triplets. The fretboard diagram shows fingerings for the T, A, and B strings across five measures.

Fretboard diagram (T, A, B strings):

- Measure 1: T (14), A (15), B (16)
- Measure 2: T (17), A (17), B (15)
- Measure 3: T (17), A (15), B (16)
- Measure 4: T (17), A (15), B (16)
- Measure 5: T (14), A (14), B (12)

A minor V position

Staff notation: Treble clef, key of A minor (no sharps or flats), 4/4 time. The melody consists of eighth notes and triplets. The fretboard diagram shows fingerings for the T, A, and B strings across five measures.

Fretboard diagram (T, A, B strings):

- Measure 1: T (7), A (9), B (9)
- Measure 2: T (10), A (10), B (8)
- Measure 3: T (10), A (8), B (9)
- Measure 4: T (10), A (8), B (7)
- Measure 5: T (7), A (7), B (5)

D minor X position

Staff notation: Treble clef, key of D minor (two flats), 4/4 time. The melody consists of eighth notes and triplets. The fretboard diagram shows fingerings for the T, A, and B strings across five measures.

Fretboard diagram (T, A, B strings):

- Measure 1: T (12), A (14), B (14)
- Measure 2: T (15), A (15), B (13)
- Measure 3: T (15), A (13), B (14)
- Measure 4: T (15), A (13), B (12)
- Measure 5: T (12), A (12), B (10)

TAB

Musical score for measures 157-160. The notation includes a treble clef staff with notes and rests, and a tablature staff below it. Measure numbers 157, 158, 159, and 160 are indicated above the staff. The tablature staff shows fret numbers (e.g., 6, 7, 8, 9, 10) and includes annotations such as "full" and "1/2".

The image displays a page of guitar tablature for blues rock and swing blues cells. It consists of six systems of music, each with a treble clef staff and a corresponding guitar tablature staff. The tablature includes various fret numbers (e.g., 7, 8, 10, 11) and techniques like bends (marked 'full' or '1/4') and slides. Chord diagrams are provided for measures 187, 191, 204, 206, and 207. The page is numbered 184 to 211.

The image shows a musical score for the song "The Wind" by The Beatles. It includes a guitar part in standard notation and a bass part in TAB notation. The guitar part is in the key of B-flat major (one flat) and has a tempo of 120 BPM. The bass part is in the same key and tempo. Both parts feature a repeating 6/8 rhythm pattern. The guitar part is written in a single staff, and the bass part is written in a single staff. The guitar part includes a key signature change from one flat to no flats (B-flat to B-natural) in the second measure of the second system. The bass part includes a key signature change from one flat to no flats (B-flat to B-natural) in the second measure of the second system. The guitar part includes a key signature change from one flat to no flats (B-flat to B-natural) in the second measure of the second system. The bass part includes a key signature change from one flat to no flats (B-flat to B-natural) in the second measure of the second system.

Movable Chords

The chords below are movable, each named after its circled note. Usually use the circled note on the largest string available for reference. See [Common Chords by Octave Shape](#). Sharp versions (F#) of notes are one fret toward the guitar body, flat versions (Bb) are one fret toward the head of the guitar.

FIRST JAZZ CHORDS

Memorize These First

Test yourself by covering the diagrams and reading one of the chord names in the six rows below, assigning a letter name (i.e. Bbma7). See if you can recall all three of the fingerings for the chord (E form, C form and A form). Be progressive. First work with the first four chords, then the first row, then add 7b5 & 7#5; 7b9 & 7#9; 9 & m9; then include all eighteen chord types.

octave shape	major	ma7	7 (dom 7)	6	augmented	minor	m7	m7b5	°7 (dim. 7)
	1-3-5	1-3-5-7	1-3-5-b7	1-3-5-6	1-3-#5	1-b3-5	1-b3-5-b7	1-b3-b5-b7	1-b3-b5-6

BO'S CLAVE, an intro. to major pentatonic

audio rhythm track: <http://guitarencyclopedia.com/zzRTBosClave.mp3>

audio basic solo track: <http://guitarencyclopedia.com/zzSEBosClaveBasicSolo.mp3>

audio intermediate solo track: <http://guitarencyclopedia.com/zzSEBosClaveIntermediateSolo.mp3>

"Bo" is Bo Diddley. He incorporated variations of the clave 3-2 rhythm in his music.

Improvisation examples in "Bo's Clave" use the pentatonic (five-tone) scales shown below. Practice each of them by playing from the note on the lowest-numbered fret on the sixth string through the highest-numbered fret on the first string, in order of pitch. Then play back down the scale, from highest to lowest pitch.

A minor pent. V A minor pent. VII A minor pent. XII A major pent. II A major pent. IV

A minor pent. V A minor pent. VII A minor pent. XII A major pent. II A major pent. IV

Basic and Intermediate Solo Versions

To make this solo study available to more users, there are two solo versions, one basic and one intermediate. They are written on the following pages.

HOW TO CHOOSE A SCALE OR ARPEGGIO FOR IMPROV

What qualifications does a scale or chord need for it to work in improvisation?

1. having many or all of the same notes as in the current chord
2. being a darkened version of the current chord or key (appropriate to the style)
3. supporting the key (often in theme and variation)
4. anticipating the next chord by introducing its sound early
5. creating a cadence (familiar short chord progression) that leads to a target chord. Any chord sound used in a cadence that does not agree with the accompaniment should sound for less than one second and should be followed by resolution to the target chord.

Pentatonic scales have occurred independently in most world cultures, since they are constructed with the most basic musical interval in all cultures, the fifth. Five notes “stacked” in perfect fifths constitute the pentatonic scale (any five notes in the series: Fb-Cb-Gb-Db-Ab-Eb-Bb-F-C-G-D-A-E-B-F#-C#-G#-D#-A#-E#-B#).

Common major and minor pentatonic scales serve as common denominators. They typically have a such a high percentage of tones compatible with each of the chords in a progression that a single pentatonic can be used throughout many or all of the chords in a progression. This has promoted their use in the various cultures and that common use has established them as a familiar, likeable element.

FINDING THE KEY

Play along with recordings to build your sense of key and scale type. Choose easy songs first, in a genre you like.

In less than five minutes per song:

determine the key

decide whether the pentatonic scale should be major or minor

find as many scale fingerings as you can in the remaining time

Determine the Key

determine the key first by ear

You will have plenty of opportunity to exercise your logical/mathematical left brain in figuring out the key. Since the logic of the left brain *is directed by the intuitive sense of the right brain*, we should start with the right brain and learn to sense the key by ear. “If it sounds good, it is good”, well said by Duke Ellington. “Music lives in the imagination”, another gem from Aaron Copland.

Find *the tone center on the sixth or fifth string with a single note*. Listen for the note you imagine would be the lowest tone of the chord the piece should end on. You could, for example stop the recording abruptly after hearing a cycle of chords (usually four, eight or twelve bars) and immediately playing a note you suspect to be the tonic (note that names the key). If it is the tonic, you should get a sense of finality.

The sense of key in each song is usually established by multiple criteria. The weight of each criteria in its contribution to establishing the key differs in each song. Those criteria include:

Frequent occurrence of a particular chord.

Beginning or ending a phrase of chord progression. A phrase is typically four, eight or twelve bars long.

Lowest note. The chord containing the lowest pitch

Drone. a repeated note (especially in the bass)

Cadence, a short, familiar chord progression that we are used to hearing establish a key

One song may establish its key more through frequent occurrence, another more through cadences. A combination of some criteria may suggest 40% of the sense of key on one note, while the remaining criteria suggests 60% of another. The one with 60% wins, of course. If its 50/50, it is ambiguous, and is a matter of opinion.

common misconceptions in determining the key

Trust your instinct after listening to the whole piece (or a lot of it). Just because a chord is prominent, or if a chord begins or ends a chord progression, doesn't necessarily mean it is the tonic chord that names the key.

Pieces can be ambiguous and subjective. The tonic chord can be a matter of opinion. If a major chord and its relative minor are equally established as the key, one person may prefer the happy major outcome and another person the sad minor outcome.

You may hear the correct tonic chord, but focus on another note in the chord and name it after the lowest note you hear instead of the lowest note you can imagine.

DETERMINE THE SCALE TYPE

Major or Minor

Decide whether you should play major or minor pentatonic in the key, or a mix of both. Play as many of the pentatonic scale fingerings as you can in under five minutes. You'll eventually be able to play all of them in under a minute. If a song gives you trouble, move on to another.

The key is named after the note that names the chord you expect the piece to end on, which is the lowest imaginable note in that chord.

common misconceptions concerning the scale type

If other attributes of the song are lively and happy, you may be tricked into thinking the tonic chord would be major, when it is minor. Fast tempo, swing eighths and high incidence of major chords other than the tonic can all contribute to the sense that the tonic chord would be major.

Attributes can trick you into thinking the tonic chord would be minor, when it is minor, including slow tempo, dissonant intervals, a sad lyric and high incidence of minor chords other than the tonic can all contribute to the sense that the tonic chord would be minor.

Chords with four or more notes, built by standard practice in thirds are commonly called seventh chords. Each seventh chord has two triad subsets, one built on its root and one built on its third. So, a major seventh chord has a major triad on its root and a minor triad on its third (Cma7 contains C major triad on its root and Em triad on its third). A minor seventh chord has a minor triad on its root and a major triad on its third.

When you hear a major seventh chord that has the minor triad part of it conspicuously voiced (making the notes of the minor triad very audible and apparent), you may be duped into thinking the chord is minor, but it has a major basis. The triad on root should be thought of as the basis of the chord.

When you hear a minor seventh chord that has the major triad part of it conspicuously voiced, you may be think the chord is minor, but it has a minor basis. Again, the triad on root should be thought of as the basis of the chord.

common pentatonic scales

Minor pentatonic has tones 1, b3, 4, 5 and b7 of a major scale. It can be called minor 7/11 pentatonic scale, which defines it according to universal chord-naming conventions. It is a minor triad (1, b3, 5 of a major scale) with a whole step below the root and fifth.

Major pentatonic has tones 1, 2, 3, 5 and 6 of a major scale. It can be called major 6/9 pentatonic scale, according to naming conventions. It is a major triad (1, 3, 5 of a major scale) with a whole step above the root and fifth.

See “[Locating Pentatonic Scales](#)”.

SENSE THE CHORD TONES

Once you have determined the key and whether you are using major or minor pentatonic scale (or both), listen to the effect of the scale you are playing against the chords in the song. When you come across a note in the scale that seems to harmonize with the current chord, sustain or repeat the note. If a note seems foreign to a chord, de-emphasize it by moving up or down the scale to another note. In playing repeatedly along with the recording, you are likely to memorize some of the “sweet” notes that harmonize with chords. I call those notes *target tones*. They are notes that are both in the scale and in the current chord (or are a pleasing addition to a chord).

sing each note you play and listen to your imagination

Sing each note as you play it. After a while, you will be able to predict the sound of each note. Later, you’ll be able to predict the emotive content of each note. If you have listened to a lot of music, you are likely to also begin imagining groups of notes called *melodic cells*. Listen to your imagination and you’ll be able to put sequences of these cells together in structures involving repetition and variation. When that happens, you are beginning to improvise!

PREPARE THE CORE MELODY BY LEARNING ARPEGGIOS

The core melody is the skeletal structure on which melody is built. It is made with *target tones*, which are notes common to the current chord *and* scale.

Play arpeggios and pentatonic scales for easy songs (three or four chords, one bar or more each) where you know the chords, for under ten minutes each song. Don’t dwell on one octave shape. Challenge yourself to move through all five octave shapes, *not* in order up and down the fretboard. Randomize the EDCAGE order first, then finish by playing *in order*. *Try to keep it under ten minutes a song, so you challenge your ability to locate the arpeggios and pentatonic scales. If a song gives you trouble, move on to another.*

Locating Pentatonic Scales

minor

major

ALTERING PENTATONIC SCALES

purposeful bending

There are three common reasons to bend a note:

- to produce a vibrato with a slight bend, usually about an eighth of a tone (1/4 way to the next fret)
- to bend to the next higher scale tone
- to bend halfway or less (sometimes 75%) to a major third (E on a C chord), perfect fifth (G on a C chord) or major seventh (B on a C chord) above the bent note, called a *microtonal bend*

If not bending for one of these purposes, you may encounter a problem. Bending part of the way toward a note that is not in the current chord nor in a tonic chord (the chord after which the key is named) usually sounds wrong.

If you begin to bend a note without forethought, you *may* be able to “save it” by purposing it to one of the three types listed above.

- If you haven’t bent it too far, you could repeatedly bend and release it an eighth of a tone and produce a vibrato.
- If a bend to the next higher scale tone is practical with the finger you have chosen, you could do that. You shouldn’t try to bend to the next higher scale tone if it is three frets higher with the index finger, though.
- If a major third, perfect fifth or major seventh of the chord is a half step (one fret) above the fretted note, it can be bent as a microtonal bend (see below).

basic microtonal bends

Microtonal bends suggest a chord tone one fret higher by bending slightly toward it. The most common microtonal bends are the next higher or next lower note in the minor (minor 7/11) pentatonic scale. They should be bent a half a fret to a fret in pitch (an eighth to a quarter tone) and should not end on the released pitch. After bending a note microtonally up in pitch, end by abruptly releasing the pressure so you don’t hear the lowered pitch.

You can bend up microtonally and release repeatedly, making a *microtonal vibrato*, but the last sound should be the bent note, not the released note.

In the major pentatonic, the second note above the tone center is the third. That third can be flatted to darken the mood. The flatted third of the major pentatonic (minor 6/9 pentatonic) can be treated as a microtonal bend, also.

microtonal bend exercises with the A minor pentatonic scale

[A minor pentatonic scale \(pdf\)](#)

[A minor pentatonic scale \(video\)](#)

advanced microtonal bends

If a major third, perfect fifth or major seventh of the chord is a half step (one fret) above the fretted note, it can be bent expressively from zero to about 75% toward the tone up a half step, with a preferred maximum of about 60%. Bending around 90% to the chord tone sounds flat.

If you are fretting a chord tone that is a minor third (b3), diminished fifth (b5) or minor seventh (b7), you can *hint* the raised version of the note by bending less than a quarter tone (1/2 fret), usually better as an eighth of a tone (1/4 fret). These can be used with any scale appropriate to the style, but are typically used in blues-related styles.

minor pentatonic with flat five (minor 7/11b5)

When you have determined that you should use minor pentatonic, consider using the minor pentatonic with a flat five wherever you want a darker mood. This works particularly well on IV or IV7 (F or F7 in the key of C) or bVI or bVI7 (Ab or Ab7 in the key of C). Typical of blues music.

major pentatonic with flat three (minor 6/9)

When you have determined that you should use major pentatonic, try it with a flat three wherever you want a darker mood. This works particularly well on IV or IV7 (F or F7 in the key of C). Typical of swing music.

DETERMINING THE CHORDS IN THE ACCOMPANIMENT

Learn the Emotive Sound of the Five Triad Types

Major (1-3-5) sounds happy. Minor (1-b3-5) sounds sad. Diminished (1-b3-b5) sounds depressed. Suspended (suspended fourth is 1-4-5 and suspended second is 1-2-5) sounds heavenly. Suspended fourth is the primary and more common version. Augmented (1-3-#5) sounds tormented.

Listen to the Bass

Most chords begin in popular music with the root (the note that names the chord) in the bass. If you can determine the bass note at the beginning of a chord, listen for the basic quality of the chord.

Learn about Chord Progression

First study [Learning Keys with Chord Progression](#). Then the chapters later in this course on chord progression and chord voicing.

DECIDING HOW YOU WILL DEPICT THE CHORDS

Abbreviating the Progression with Region Chords

An arpeggio could be used for each chord, but it is usually advantageous for both the player and the listener to cut down on the number of chords. *Region chords* are specialized substitute chords. Two or more chords in the accompaniment can be represented with a single *region chord* in the melody when the mood and color of the chord is compatible. Region chords do require more discretion, since all their tones don't match every tone in each accompaniment chord.

Region chords are created using chord synonyms and [secondary roots](#). Chord synonyms are used where versions of chords are conceived with the tones common to both chords. Secondary roots consider versions of chords where the assignment of the root can be changed to another chord tone, commonly the third or sixth.

The *chord scale* is the synonym scale named after the root of the chord. A *chord region scale* is named after the root of the chord region chord.

Elaborating the Progression with Cadences and **Voice Leading**

Each chord can be preceded with one of a variety of chords that will lead to it. The chord being preceded in such a manner is a *target chord*. The chord played before the target chord is the *setup chord*.

Playing a dominant seventh type chord (1-3-5-b7) before a target chord is common to both classical and jazz music (the idea originated in classical, of course). These are called *secondary dominants*. See “[Modal II-V-I Cadences and Turnarounds](#)”/[Secondary Dominant](#) and “[Melodically Superimposed Cadences](#)”/[Secondary Dominants](#). The movement from the root of the secondary dominant to the target chord is up a perfect fourth. The root is the letter name that begins the chord name, which may include a flat or sharp after it, such as “Bb”.

In jazz, the dominant chords may be altered and have added ninths, elevenths (usually sharp eleven) and thirteenth. Flat five substitutes in jazz are synonyms of secondary dominants that occur on flat two of the target (which is a flatted fifth away from the fifth of the target). See “[Substitution](#)”/[Flat Five Substitute](#).

Scale-tone chords built on the next higher or next lower scale tone from the target can lead to the target by moving all their notes in parallel to the target. This type of progression has a processional quality, since all the notes are moving to or away from the target in tandem.

Scale-tone chords built on roots up or down a fourth from the target will typically retain one or two notes and change two notes in moving to the target, producing a pivotal quality.

conflicting with the current chord

Setup chords are played immediately before the chord they target, such as G7 to Cma7. Sounding a [secondary dominant](#) or other setup chord melodically immediately before the target chord is often conflicts harmonically with the chord in the accompaniment. If the duration of the setup chord is much over one second in duration, the listener has the time to contemplate its disagreement with the current chord. Certainly in two seconds, the listener could sense this conflict.

To avoid the sense of disagreement, play any setup chord that is not the same as the current chord for one second or less. At 120 beats per minute, the most common tempo in popular music, this would be two beats. This implies that you play the setup chord briefly at the end of the period before the target chord. If on the four-bar chord progression in 4/4 | Cm7 | Cm7 | Dm7b5 | G7 |, you intend on playing A7#5 in the second bar, play it during the last two beats.

See “[Voice Leading](#)”.

QUICKENING OPEN POSITION CHORDS

If you haven't already, you should memorize these open position chords and work toward being able to change them quickly.

three devices for quicker chord changes

The three devices below, "retain a finger", "glide" and "carry a shape" all help in quickening your chord changes.

Retain a Finger

In each of these sets of chords below, one of the notes is common to all of the chords in the set and is fingered with the same finger. Retain the common finger when changing between chords in the same set. Make sure you are able to change between any of the chords in each set in any order (such as “second string C, index finger”).

second string “C”, index finger

second string “D”, ring finger

third string “A”, middle finger

third string "A", ring finger**fourth string "E", middle finger****fifth string "B", middle finger**

Glide

For each of these sets of chords, change the note that is on the same string with the same finger by “gliding”. Release the pressure to the fret but still touch the string as you move the finger to it’s new location. Make sure you are able to change between any of pairs of chords.

first string, little finger

second string, ring finger

third string, index finger

Carry the Shape

When a graphic shape involving two or more fingers in a chord fingering is moved to a location in the next chord (retaining the shape), I call it “carrying the shape”. Generally don’t change the curvature of the fingers involved. Make sure you are able to change between any of pairs of chords.

Am to E, first three fingers

A to E, middle and ring

A, Am, Em and E (any order), middle and ring

C, D and G (any order), middle and ring

La Bamba at 120 BPM - [live video](#)

Measures 53 and 54 of 'La Bamba' at 120 BPM. The notation shows a 4/4 time signature. Measure 53 contains a C major chord (C4, E4, G4) and a bass line with a half note C3 and a half note G2. Measure 54 contains a G major chord (G4, B4, D5) and a bass line with a half note G2 and a half note D3. Above the staff, four guitar fretboard diagrams are shown for measures 53 and 54. Measure 53 has two diagrams: one for C major (fret 1, strings 1-2-3) and one for F major (fret 1, strings 1-2-3-4). Measure 54 has two diagrams: one for G major (fret 2, strings 1-2-3-4) and one for F major (fret 1, strings 1-2-3-4). The diagrams are labeled with Roman numerals I, III, and I.

Should I Stay at 135 BPM - [live video](#)

Measures 55 through 66 of 'Should I Stay' at 135 BPM. The notation shows a 4/4 time signature. Measures 55-58 are in the key of D major (F#). Measure 55 contains a D major chord (D4, F#4, A4) and a bass line with a half note D3 and a half note A2. Measure 56 contains a G major chord (G4, B4, D5) and a bass line with a half note G2 and a half note D3. Measure 57 contains a D major chord (D4, F#4, A4) and a bass line with a half note D3 and a half note A2. Measure 58 contains a G major chord (G4, B4, D5) and a bass line with a half note G2 and a half note D3. Measures 59-62 are in the key of G major (F#). Measure 59 contains a G major chord (G4, B4, D5) and a bass line with a half note G2 and a half note D3. Measure 60 contains a F major chord (F4, A4, C5) and a bass line with a half note F2 and a half note C3. Measure 61 contains a D major chord (D4, F#4, A4) and a bass line with a half note D3 and a half note A2. Measure 62 contains a G major chord (G4, B4, D5) and a bass line with a half note G2 and a half note D3. Measures 63-66 are in the key of D major (F#). Measure 63 contains a D major chord (D4, F#4, A4) and a bass line with a half note D3 and a half note A2. Measure 64 contains a G major chord (G4, B4, D5) and a bass line with a half note G2 and a half note D3. Measure 65 contains a D major chord (D4, F#4, A4) and a bass line with a half note D3 and a half note A2. Measure 66 contains a G major chord (G4, B4, D5) and a bass line with a half note G2 and a half note D3. Above the staff, twelve guitar fretboard diagrams are shown for measures 55 through 66. Measure 55 has one diagram for D major (fret 2, strings 1-2-3). Measure 56 has one diagram for G major (fret 2, strings 1-2-3-4). Measure 57 has one diagram for D major (fret 2, strings 1-2-3). Measure 58 has one diagram for G major (fret 2, strings 1-2-3-4). Measure 59 has one diagram for G major (fret 2, strings 1-2-3-4). Measure 60 has one diagram for F major (fret 1, strings 1-2-3-4). Measure 61 has one diagram for D major (fret 2, strings 1-2-3). Measure 62 has one diagram for G major (fret 2, strings 1-2-3-4). Measure 63 has one diagram for D major (fret 2, strings 1-2-3). Measure 64 has one diagram for G major (fret 2, strings 1-2-3-4). Measure 65 has one diagram for D major (fret 2, strings 1-2-3). Measure 66 has one diagram for G major (fret 2, strings 1-2-3-4). The diagrams are labeled with Roman numerals I, III, and I.

One Half Second per Chord

Not Fade Away 135 BPM - [live video](#)

The musical score is presented in three systems, each with a guitar staff (treble clef, key signature of one sharp) and a bass staff (bass clef, key signature of one sharp). The guitar staff contains eighth-note chords and rests, while the bass staff contains whole-note chords. Measure numbers 67 through 78 are indicated above the guitar staff. Three fretboard diagrams are provided: the first for measures 67-68 (A and D chords), the second for measures 69-70 (A and D chords), and the third for measures 71-74 (E, A, and E chords). The diagrams show fingerings for the left hand, with circles indicating fret positions and numbers indicating fingerings. The bass staff uses a simplified notation where 'O' represents an open string and 'n' represents a fretted note.

Fretboard Diagram 1 (Measures 67-68):

- Diagram 1 (A chord): 1 5 1 3 5
- Diagram 2 (D chord): 1 5 1 3
- Diagram 3 (A chord): 1 5 1 3 5

Fretboard Diagram 2 (Measures 69-70):

- Diagram 1 (A chord): 1 5 1 3 5
- Diagram 2 (D chord): 1 5 1 3
- Diagram 3 (A chord): 1 5 1 3 5

Fretboard Diagram 3 (Measures 71-74):

- Diagram 1 (E chord): 1 5 1 3 5 1
- Diagram 2 (A chord): 1 5 1 3 5
- Diagram 3 (E chord): 1 5 1 3 5 1

HOW TO LEARN KEYS WITH CHORD PROGRESSION

Follow These Three Steps to Learn Each Song

1. Listen to the recording.
2. Try to determine the key by ear. The key will be indicated in the version with“(original key)” in its title .
3. When the option is given, play the progression in power chords and barre chords. Progressively work with more keys, until you know eight important keys.

Listen to the Recording

In the pdf version of this book, Youtube links are given for most of the songs (a blue, underlined title is a Youtube link). These should allow you to listen to the song in the key as written. Some of the songs have a link to an audio recording in the style of the song, exhibiting the same chord progression as the song.

Learn to Determine the Key

The key is the root of the main chord that you would expect the chord progression to end on to sound finished and complete. For each song, you are told which chord names the key (the tone center). Listen to the recording, play the bass note that names the key and see if it makes auditory sense to you as the “focal” point of the song.

Learn to Transpose with the Capo

A capo is a clamping device placed across a fret to change (transpose) the key. The actual key is the key you hear. When you use a capo, you are playing as if you are in open position, but the sounding (actual) key is higher, according to where you place the capo. The key you would be sounding with the same fretting *without* the capo is the “virtual” key.

place the capo to play in C or G

You’ll learn to transpose each song with the capo to C or G, so its easy to fret. At the appropriate fret, the capo will make the guitar sound in the original key.

Thinking In C And G With The Capo

actual and virtual major keys with the capo

actual key →	A	Bb	B	C	C#	Db	D	Eb	E	F	F#	Gb	G	Ab
capo fret for virtual C major	9	10	11	12 open	1	1 13	2	3	4	5	6	6	7	8
capo fret for virtual G major	2	3	4	5	6	6	7 open	8	9	10	11	11	12	1 13

To think in the key of C, place the capo so the third finger is on the tonic (note that names the key) on the fifth string and the capo is three frets lower. If the key is on the fifth string eighth fret, the capo would go on the fifth fret.

To think in the key of G, place the capo so the second finger is on the tonic (note that names the key) on the sixth string and the capo is three frets lower. If the key is on the sixth string eighth fret, the capo would go on fifth fret.

Memorize the chord progressions shown on the next page thoroughly.

Using the fingerings below and a capo, you can play thousands of popular songs in all keys, tending more towards acoustic music like folk and soft rock.

Triads are three-note chords. Each triad has three different notes, but notes are commonly doubled (or tripled). “C”, the first chord has a “C” note on the fifth and second strings and has an “E” note on the fourth and first strings. The “G” chord has a “G” note on the sixth, third and first strings. The numbers below the chord diagrams show the numbered tones in the key of the chord, but we don’t need that information now.

Power Chords and Barre Chords

If the chord name is just a letter name, such as C, Bb (B flat) or F# (F sharp), it is major. If the chord name has a lower case “m” after the letter name, it is minor.

power chords

Power chords sound strong and primal. They are the root of the chord (the note with the letter name that names the chord) and the fifth of a major scale named after the chord root. An “A” power chord includes the note “A” and the fifth step of the A major scale, “E”. The root of the power chord is commonly doubled an octave higher, so an “A” power chord would have notes in ascending order “A-E-A”. The symbol for a power chord is the letter name followed by an Arabic “5”, such as “A5”.

sixth string root
(major or minor)

fifth string root
(major or minor)

barre chords

Using the fingerings below, you can play thousands of popular songs, tending more towards rock. Use the chart at the right to locate the large circled note on the diagram on a specific note. Orient from the circle on the fifth or sixth string at the left of the diagram.

FULL FRETBOARD NOTE NAMES AND NUMBERS

The the major scale tones “1” through “7” can be located for any key by conceptually moving the diagram up or down so the number “1” is on the note that names the key or chord. Use the circled “1” on the one of the three largest strings (on the left of the diagram). To locate the number for the key of “C”, the circled “1” on the sixth string would be at the eighth fret..

SCALE-TONE CHORD PROGRESSION

Major Scale-Tone Triads By Roman Numeral

Chords can be built on each step of a major scale. Each chord is usually with every other note of the scale, such as scale tones one, three and five to build a chord on step one. Roman numerals (I, II, III, IV, etc.) are used to number the steps of a major scale on which chords are built. The letter names of chords choose from the letters A through G in the alphabet, and may be followed by a sharp or flat, indicating its modification up or down a half step (one fret). To make a chord progression transposable (changeable to other keys) and to compare it to other progressions, names are replaced with roman numerals.

The description of the chord quality that followed the letter name remains the same. If a letter name such as A, F# or Bb (# is sharp and is part of the letter name, b is flat as is part of the letter name "B flat"). In the key of F (where Bb is the fourth step of the F major scale), Bbma7b5 would be written as IVma7b5. As a standard practice, chord are built with every-other scale tone, such as 1-3-5 and 2-4-6.

Major Scale-Tone Triads in All Keys - Stepwise Root Order

major scale tone	1	2	3	4	5	6	7

literal names in C#	C#	D#m	E#m	F#	G#	A#m	B#dim.

Chord Progression in Stepwise and Fourths Order

Chords most commonly occur in songs in sequences of fourths or stepwise (alphabetical order), ascending or descending (i.e. forward or backward alphabetically). It will greatly speed up your process of learning to finger and memorize chord progressions if you memorize the chords built on major scales in these sequences of fourths. Common fingerings are shown below. The III major chord is commonly used as major, which makes it lead more strongly to VIIm), so III major is included. The VII diminished chord is rare in pop music, so it is omitted.

Major Scale-Tone Triads in All Keys - Perfect Fourths Root Order

major scale tone	7	3	6	2	5	1	4
roman numeral name	VIIIdim.	IIIIm	VIIm	IIIm	V	I	IV
quality	diminished	minor	minor	minor	major	major	major

Work Progressively Toward the Eight Important Keys

Sharps raise notes by one fret, making them one fret closer to the guitar body. Flats lower notes by one fret, making them one fret closer to the head of the guitar. It is best to work with no sharps or flats first and gradually add them to your memory of fretboard note locations and the note set that makes up each major scale and major key.

Using the procedures below, you will start with no sharps or flats. Then you will progressively add sharps and flats. You will accumulate a memory of the note names the eight keys C, G, D, F, A, Bb, E, Eb (in roughly that order).

Once you memorize chords on steps through six in all of these keys you'll need to complete the set with VII diminished. Its root (the letter-named note that names it) is a half step down (toward the head of the guitar) from "1".

Finally, you will be able to modify your memory of each of those keys to conceive all other keys. For example, C major has all natural notes, so C# major has all notes sharp, Likewise, G major has an "F#", so Gb major has all notes flat, except "F" is natural.

power chords for songs with I, IV, V in C, G, D, A and E

I, IV and V are the three major chords in a major key. They are the basis of songs in a major key, especially in pop music.

To have no sharps or flats, work with I, IV, V chord progressions in the keys of C, G, D, A and E. Here are the names of I, IV and V chords in those keys are shown below. Continue to play versions of I, IV, V songs with the capo as well. Use the [actual and virtual keys with the capo](#) chart as needed.

key	I	IV	V
C	C	F	G
G	G	C	D
D	D	G	A
A	A	D	E
E	E	A	B

barre chords for songs with I, IV, V, VIIm in C, G, D, A and E

Now add barre chords. To have few sharps or flats, work with I, IV, V and VIIm chord progressions in the keys of C, G, D, A and E. Play the same songs with the capo as well. Use the [actual and virtual keys with the capo](#) chart as needed. Two of these keys involve a sharp. The VIIm chord in Here are the names of I, IV and V chords in those keys:

key	I	IV	V	VIIm
C	C	F	G	Am
G	G	C	D	Em
D	D	G	A	Bm
A	A	D	E	F#m
E	E	A	B	C#m

barre chords for songs with I, IIIm, IV, V, VIIm (adding IIIm) In C, G, D, A, E and F

Two accidentals (sharps or flats) are added. Adding the key of F introduces the first flat, “Bb”. Introducing IIIm introduces an “F#” in the key of “E”: “F#m”. Play the same songs with the capo as well. Use the [actual and virtual keys with the capo](#) chart as needed. Here are those chords:

key	I	IIIm	IV	V	VIIm
C	C	Dm	F	G	Am
G	G	Am	C	D	Em
D	D	Em	G	A	Bm
A	A	Bm	D	E	F#m
E	E	F#m	A	B	C#m
F	F	Gm	Bb	C	Dm

barre chords for songs with I through VIIm In C, G, D, A, E, F, Bb and Eb

Up to three accidentals (sharps or flats) are added: F#, C# G# or Bb and Eb. Adding the key of Bb introduces the second flat, “Eb”. Introducing IIIIm introduces a C# in the key of “A” and “G#” in the key of “E”.

key	I	IIIm	IIIIm	IV	V	VIIm
C	C	Dm	Em	F	G	Am
G	G	Am	Bm	C	D	Em
D	D	Em	F#m	G	A	Bm
A	A	Bm	C#m	D	E	F#m
E	E	F#m	G#m	A	B	C#m
F	F	Gm	Am	Bb	C	Dm

TRANSCRIBING TIPS

With Quicktime 7 on Mac or with Windows Media Player on PC, you can slow down the recording. Quicktime 7 can also change the pitch. Other great software applications for this purpose are The Amazing Slow Downer, Anytune and Audacity. To make an instrument part more audible, slow the recording down, isolate the channel that the instrument you are listening for is on (if not in the center), adjust the EQ (equalization or tone). Guitar “pops” out when the lowest frequency bands are off, the mids and upper-mids very high. Sometimes you need to turn down the highest frequency band to reduce white noise.

Transcribing is writing down musical parts by listening. I’m using the term “transcribing” loosely here, since you are not necessarily writing down the musical parts, but trying to get them in mind.

Use your brain’s “buffer” (short term memory). Stop the recording immediately after the note you want to discern. That way, it’s that last thing you heard and your memory won’t be muddled with other notes.

Be able to listen to the music as a whole, made up of the ensemble of instruments. Also, be able to isolate one part. Learn which part is important to track.

In pop music, each chord usually starts with the root in the bass. It is especially effective to track the bass part in your mind when the bass is “pumping” (repeating) each note.

The first chord is not necessarily “I”. Songs don’t necessarily end on “I”.

The key is not necessarily “I”. When it is not, you still have to figure out what the parent major scale is (see [Parent Scale](#)). Back In Black uses I-IV-V of A, but the key is on V.

Notes can occur in different octaves. You may be thinking of the root of the IV chord on the fourth string, instead of the sixth string, then experience some confusion when the root from the I chord on the fifth string goes down in the bass.

The root is not always in the bass. The I chord in the first 15 seconds of you shook me all night long, has it’s fifth in the bass, not the root.

Once you become familiar with the sound of the major scale-tone triads on steps one through six, you can hear a bass note and imagine the rest of the chord as major (happy) or minor (sad) as it occurs in the scale.

ROMAN NUMERALS AND SLASHES

When a chord name is followed by a slash and a letter name, it specifies a bass note for the chord. C7/G specifies a C7 chord with “G” in the bass. The bass note doesn’t have to be in the chord specified before the slash. For example, F/G indicates an F chord with “G” in the bass, while “G” is not part of the F chord. Chords can also be represented with Roman numerals showing on which step of a major scale based on the key the root of the chord occurs. See [“Chords with a Specified Bass Note”](#) below.

Roman numerals are also used to the upper right of chord diagrams to indicate the fret number of the top fret on the diagram. You can see examples of those in the earlier [Scale-Tone Chord Progression](#) section, along with Roman numerals to indicate the steps of the scale.

Slashes are also used to indicate beats of a chord on a staff. See [“Slashes to Indicate Beats of a Chord on a Staff”](#).

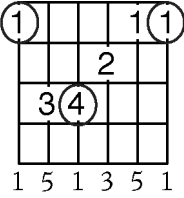

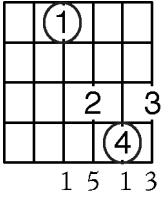

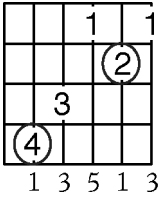

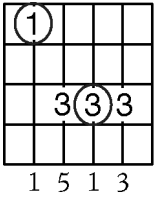

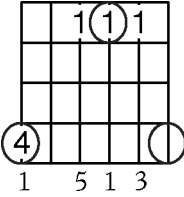

Chord Root

Determine the key you wish to play a piece of music in and assign that note name the number “1”. Each roman numeral and any flat or sharp that may precede it names the root of a chord. Use the transposing table below to identify the letter name the chord root.

transposing table

key ↓	I	#I	bII	II	#II	bIII	III	IV	#IV	bV	V	#V	bVI	VI	#VI	bVII	VII
A	A	A#	Bb	B	B#	C	C#	D	D#	Eb	E	E#	F	F#		G	G#

G	G	G#	Ab	A	A#	Bb	B	C	C#	Db	D	D#	Eb	E	E#	F	F#

Reference each chord by the lowest-pitched root, which will always be on strings six, five or four. Categorize the roots on each of these strings as being low-pitched or high-pitched. Low-pitch versions would be fretted with your first or second finger. High-pitch versions would be fretted with your third or fourth finger. Think of the [octave shapes](#) used to designate the chord roots in these five categories:

octave shape	major chord example	low-octave root on	think as	finger root with
E form		sixth	sixth low (low-pitched)	index or middle
D form		sixth	sixth low (low-pitched)	index or middle
C form		sixth	sixth low (low-pitched)	index or middle
A form		sixth	sixth low (low-pitched)	index or middle
G form		sixth	sixth low (low-pitched)	index or middle

Chord Quality

In the chord name “bVII^{ma}7b5”, the chord root is “bVII”. The remainder of the chord name “ma7b5” refers to the *quality* of the chord. *If there is nothing in the chord name after the roman numeral, the quality is major.*

Look up chord fingerings on in [Fingering Common Chords](#) for movable chords which have the roots of the chords circled. Each movable chord can be played on any root by moving it up and down the neck.

Chords with a Specified Bass Note

Chord names ending with a forward slash (/) followed by an Arabic numeral (1, 2, 3, 4, etc.) indicate a specific note in the bass. The Arabic numeral may be preceded by a sharp or flat, such as “b7” (as would appear in I/b7, for example). To identify the bass note, you must think in the major scale of the *chord* root, not the key. Use the [transposing table](#) shown earlier to identify the letter name the chord root.

To avoid ambiguity, “add tone” chord names should not use a forward slash. In other applications of music notation, “G add 9” can be written “G/9”, but should be written “G add 9” to avoid confusion.

Slashes to Indicate Beats of a Chord on a Staff

In academic or professional band charts, forward slashes are also used in place of standard notes to indicate rhythms with which chords are played. This is an entirely different use of the slash (see chords with a specified bass note earlier),

slashes indicating whole beats

slashes indicating specific rhythms

full band

13 F♯9 (5 bass) G9 (5 bass)

17 Gm9 (5 bass) C7(b5) F♯9 (5 bass)

Time Signatures

Time signatures are shown at the beginning of a piece of music to indicate the number of beats per measure and the value of the whole note. The top number indicates the number of beats per measure. For more information, see [Rhythmic Reading](#).

Dividing the Music into Bars

In this system of chords by roman numeral, vertical lines (“|”, called a “pipe” in typography) indicate the end of each bar. In the example below, eight bars of music are shown. Notice that is arranged with four bars per line, which shows standard musical form. Notice the time signature at the beginning.

4/4	IIm7	V7	Ima7	I7	
	IV7	#IV°7	Ima7	V7	

If, at the end of a line of chords by shown roman numeral, there is no vertical line, assume the last bar should end anyway. So, the example below indicates the same thing as the example above.

4/4	IIm7	V7	Ima7	I7
	IV7	#IV°7	Ima7	V7

Subdividing Bars

When more than one chord occurs in a bar, each chord name represents one beat for that chord and a forward slash (“/”) is shown after the chord name for each additional beat. In the second bar, beat one is “V7”, beat two continues “V7” (indicated with the slash), beat three is IIm7b5 and beat four is V7b9.

In bar three below, two chord names are shown. Divide the bar in half when no other indication is given. In bar seven, the “Ima7” gets three beats and the “I6” gets one beat, giving one beat to Ima7 for its name and two additional for each forward slash.

4/4	IIm7	V7 / IIm7b5 V7b9	Ima7	I6	I7
	IV7	#IV°7	Ima7 / / I6	V7	

“Pushes”

When the either symbol “<” or “^” is shown before a chord name, that chord is to be played one half beat early. In the example below, the second chord in the first, second and fourth bars is on the “and after 2”, pushing three by playing a half beat early.

	1 + 2 + 3 + 4 +	1 + 2 + 3 + 4 +	1 + 2 + 3 + 4 +	1 + 2 + 3 + 4 +
4/4	G / ^ A /	F / ^ Em /	G / A /	F / ^ Em /

Pairs of Eighths

In the rare occasion that two chords are played on the same beat for a half beat each, the two chords are marked with an underline that contains both of them: each). The example below indicates “IV” on the first half of beat four and “V” on the last half of beat 4.

4/4 | I / / IV V |

Left and Right Repeat Signs

As in standard music notation, repeat signs indicate a section is played twice. Chord names can be in letter name version or roman numerals, making no difference in the effect of the repeats.

The symbol “||:” is the left repeat shown at the beginning of the repeated section. The symbol “:||” is shown at the end of the repeated section. See the example below, where four bars are to be played twice.

||: I | IV | bVII6 | I :||

When more repetitions are needed, it can be indicated in text. This examples tells us to play the four bars four times.

4X: ||: C | Bb | F6 | Bb :||

“In the Key Of”

Sometimes a section of a song involves a chord progression which would be simple to express in another key, yet would require many flat or sharp chord root names to express it in the main key. In this case, the secondary key is referred to as “in the key of” followed by a roman numeral (which may be preceded by a flat or sharp).

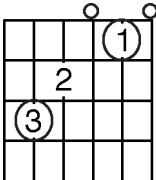

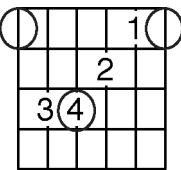

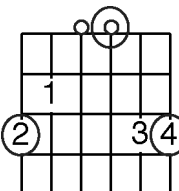

Determine the name of the keynote (tone center) for the secondary key. The chord names that follow (“in the key of”) are calculated in relation to a major scale with the keynote of the second key as “1”. If the song returns to the original key, it will then say “in the original key”.

I-IV-V SONGS

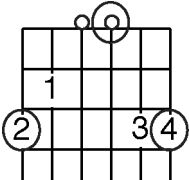

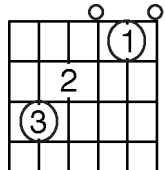

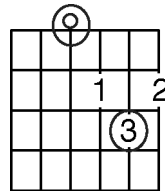

preview the chords

Starting with I, IV and V, each section of this study adds a chord. Play the chords involved for each section.

key of C

I major	IV major	V major
C I	F I	G I

I-IV-V SONGS WITH THE KEY ON V (4 KEYS)

figure out the **parent scale**

Songs in this section that have the key on “V”. Knowing the key is on “V” of a hypothetical major scale (parent major scale), you will need to figure out what major scale it came from (I). It’s a sort of reverse construction. If the key is G and the key is on V, then the parent scale is “C”. Here is a list of the keys on V and their parent scales:

key on V	parent scale
Ab	Db
A	D
Bb	Eb
B	E
C	F
C#	F#
Db	Gb
D	G
Eb	Ab
E	A
F	Bb
F#	B
Gb	Cb
G	C

the fretboard method of finding the **parent scale** for V

Find the note that names the key on the sixth string. The note that names the parent scale is on the same fret of the fifth string.

the perfect fourth method of finding the **parent scale** for V.

Whatever note names the key, the note that names the parent scale is the next note in the series of perfect fourths (think “BEAD Go Catch Fish”):

B# E# A# D# G# C# F# B E A D G C F Bb Eb Ab Db Gb Cb Fb

This order of fourths (above) is BEADGCF three times, once with sharps, then naturals (no sharps nor flats), then with flats. So, the key of D on V would be the [parent scale](#) G. The key of F on V would be the [parent scale](#) Bb.

verse ||: G | G | Em | Em | C | D | G | G :||

The image displays a musical score for the song "The Sound of Silence" by Simon & Garfunkel. It is presented in a two-system format, with the first system covering measures 1 through 4 and the second system covering measures 5 through 8. The score is written for guitar and bass, with a treble clef and a key signature of one sharp (F#).

System 1 (Measures 1-4):

- Measure 1:** Treble clef, F#4, 4/4 time. Notes: G4 (quarter), A4 (quarter). Fingering: 0, 3. Chord: G.
- Measure 2:** Treble clef, F#4, 4/4 time. Notes: G4 (quarter), A4 (quarter). Fingering: 0, 3. Chord: G.
- Measure 3:** Treble clef, F#4, 4/4 time. Notes: G4 (quarter), A4 (quarter). Fingering: 0, 3. Chord: G.
- Measure 4:** Treble clef, F#4, 4/4 time. Notes: G4 (quarter), A4 (quarter). Fingering: 0, 3. Chord: G.

System 2 (Measures 5-8):

- Measure 5:** Treble clef, F#4, 4/4 time. Notes: G4 (quarter), A4 (quarter). Fingering: 0, 3. Chord: G.
- Measure 6:** Treble clef, F#4, 4/4 time. Notes: G4 (quarter), A4 (quarter). Fingering: 0, 3. Chord: G.
- Measure 7:** Treble clef, F#4, 4/4 time. Notes: G4 (quarter), A4 (quarter). Fingering: 0, 3. Chord: G.
- Measure 8:** Treble clef, F#4, 4/4 time. Notes: G4 (quarter), A4 (quarter). Fingering: 0, 3. Chord: G.

The score includes a guitar tab (G) and a bass tab (B) for each measure. The guitar tab is written on a six-line staff, and the bass tab is written on a four-line staff. The guitar tab includes fret numbers (0, 3, 4) and a bar line. The bass tab includes fret numbers (0, 3, 4) and a bar line.

INTRO TO COMPING DESIGN

The many rhythmic, harmonic and technical elements that make up accompaniment parts are shown here in the form of comping designs. Learn many examples of each one to be able to use it in your playing. They will enable you to quickly work up a version of a new guitar you are copying from someone's performance by recognizing the comping designs they used, having learned all the common ones here. In your song writing and arranging, these are essential for a variety of genres.

common chord fingerings

A	I	Am	I	A7	I	B7	I	C	I	D	I
1 5 1 3 5		1 5 1 b3 5		1 5 1 3 b7		1 3 b7 1 5		1 3 5 1 3		1 5 1 3

1 5 1 3 b7 1		5 1 3 5		1 3 5 1 5 1		1 3 5 1 3 1		1 3 5 1 3 b7			

See [Quickening Open-Position Chords](#), if necessary.

Name these movable barre chords after the circled note in the bass (on the sixth or fifth string):

major	minor	major	minor
1 5 1 3 5 1	1 5 1 b3 5 1	1 5 1 3	1 5 1 b3 5

EDCAGE MOVABLE TRIADS AND ARCS

These are the basis of all chords. Study them more thoroughly in [Triad Arcs](#), [Octave Shapes](#) and [Making Major Chords Movable](#).

Full-Fretboard F Major Chord Tones

Full-Fretboard F Minor Chord Tones

RHYTHMIC STRUMMING

Rhythmic strumming involves moving the strumming hand down and up continuously and deciding which strokes actually contact the strings, sometimes "missing" the strings. The motion of the hand is never broken.

The Backbeat

4/4 time is four beats per bar where a whole note gets four beats. See Time Signatures. The measurement of time in music is called *meter*. Metric accent is a slight accent we apply to beats like the first beat of a bar to signify the grouping by bars. See Time Signatures.

The standard implied metric accent in 4/4 time is strongest on the first beat, second on the third beat (halfway through the bar), next strongest on the second and fourth beats. The second and fourth beats are nick-named the *backbeat*, since they are not the main ("front") beats.

Reggae music typically puts the guitar and some other percussion instruments like that clavichord on the backbeat.

Santeria reggae backbeat - [click to play video](#)

Locate the chord by finding their letter name on one of the three largest strings on the full-fretboard letter name chart.

Counted and Memorized Rhythm

When strummed rhythms are repetitive, they can be first learned by counting and clapping, then memorized. While counting the syllables, clap or tap where a chord occurs. *Then* play it on the guitar, first in “air guitar” fashion. As you repeat the rhythm, gradually touch the guitar as you think the rhythm.

Dead Flowers memorized rhythm

Memorize this rhythm and apply it to the each bar of the chord progression.

verse

D	A	G	D	D	A	G	D
D	A	G	D	D	A	G	D

Reading Rhythms Too Long to Memorize

A common method of learning a strummed rhythm is by counting and clapping it first. Count the syllables “1 + 2 + 3 + 4 +”, pronounced “one - and - two - and - three - and - four - and”. While counting the syllables, clap or tap where a chord or not occurs. *Then* play it on the guitar, first in “air guitar” fashion, not touching the guitar. Then gradually touch the guitar as you think the rhythm.

Hey Joe count and strum

The musical score for "The Wind" by The Beatles is presented in a multi-staff format. The top staff is the guitar part, written in treble clef with a key signature of one sharp (F#) and a 3/4 time signature. It consists of four measures, each labeled with a chord: C, G, D, and A. The guitar part is a simple melody using diamond-shaped notes. Below the guitar staff is a series of rhythmic markings: "1 + 2 + 3 + 4 +" repeated four times, with arrows indicating downstrokes for the first four notes and upstrokes for the fifth note in each measure.

The bottom staff is the bass part, written in treble clef. It also consists of four measures, each labeled with a chord: E, G, D, and A. The bass part is a simple melody using diamond-shaped notes. Below the bass staff is a series of rhythmic markings: "1 + 2 + 3 + 4 +" repeated four times, with arrows indicating downstrokes for the first four notes and upstrokes for the fifth note in each measure.

Below the bass staff is a four-line tablature system. The first line is labeled "T" (Treble) and the second line is labeled "B" (Bass). The tablature shows fret numbers (0, 1, 2) for each string in each measure, corresponding to the notes in the bass part. The fret numbers are: Measure 1 (E): T=0, B=0; Measure 2 (G): T=1, B=2; Measure 3 (D): T=2, B=2; Measure 4 (A): T=2, B=2.

interlude 2

The first measure of the piece is marked with a treble clef and a key signature of one flat (B-flat). The note is a half note, G4, with a stem and a flag. The measure is labeled 'B' above it. Below the staff, there are two arrows: a downward arrow labeled '1+2' and an upward arrow labeled '+', indicating a specific fingering or bowing technique.

12

The musical score is written for guitar in standard notation. It consists of three systems of music. The first system, labeled 'verse', contains measures 1 through 8. It features two main chord voicings: Dm V (first system) and F I (second system). The rhythmic notation below the staff uses a mix of eighth and sixteenth notes, with some measures containing rests. The second system, labeled 'chorus', contains measures 9 through 12. It features four main chord voicings: B^b I (first system), F I (second system), C III (third system), and Dm V (fourth system). The rhythmic notation continues with similar patterns. The third system, labeled 'chorus', contains measures 13 through 16. It features three main chord voicings: A V (first system), B^b VI (second system), and C III (third system). The rhythmic notation continues with similar patterns. The score is written in a key signature of one flat (Bb) and a 4/4 time signature.

ACCENTS

Simple rhythmic themes are important. There can only be two or three significant ideas going on at a time in an arrangement to make it understandable. So usually instruments play the same rhythmic themes in unison, or play variations of one another's rhythmic themes. Two or three well-placed accents during a bar are effective in giving a tune likable character. Here are some examples.

Full-Band Accents

Steppin' Out accent - [click to play video](#)

Swing Eighth
♩ = 170

The musical score is presented in three systems, each with a piano (P), guitar (G), and bass (B) staff. The tempo is marked as 'Swing Eighth' with a quarter note equal to 170 beats per minute. The key signature is one sharp (F#). The piano part features a steady eighth-note accompaniment with occasional accents. The guitar and bass parts provide harmonic support with chords and single notes. The score includes chord symbols (G7, C7, D7) and rhythmic notation (eighth notes, quarter notes, and rests).

System 1 (Measures 1-5): The piano part begins with a rest in measure 1, followed by a series of eighth notes. The guitar and bass parts play chords and single notes. Chord symbols: G7.

System 2 (Measures 6-10): The piano part continues with eighth notes and accents. The guitar and bass parts play chords and single notes. Chord symbols: C7, G7.

System 3 (Measures 11-15): The piano part continues with eighth notes and accents. The guitar and bass parts play chords and single notes. Chord symbols: D7, C7, G7.

Evil Ways accent version 1 - [click to play an example of both below](#)

Evil Ways accent version 2

Tighten Up accent

Four guitar chord diagrams are shown above the staff:

- F#m V**: Fretboard diagram showing notes b3, 5, 1, b3. Fingering: 1, 2, 3, 4.
- Ama7 IV**: Fretboard diagram showing notes 1, 3, 5, 7. Fingering: 1, 2, 3, 4.
- Bm II**: Fretboard diagram showing notes 5, 1, b3, 5. Fingering: 1, 2, 3, 4.
- C# IV**: Fretboard diagram showing notes 5, 1, 3, 5. Fingering: 1, 2, 3, 4.

The staff shows a sequence of chords with rests, and the rhythm is marked with numbers 1 through 4 and plus signs.

BAR RESTS

Bar Rests Challenge Your Sense of Time

full-band breaks

Silence can be as effective as sound. It can be very dramatic to have full-band breaks (silences) in the accompaniment. It can be challenging to resume with the other musicians in correct time. Sometimes the drummer or other percussionist will play through the break with eighth notes or some other multiple pulses per beat, keeping the time. Other times you just have to imagine the continuing rhythm through the break, in sync with the other musicians and listeners.

MUTING

Fretting Hand Chord Muting to Limit Duration

This is used to limit the duration of chords, which stops their sustain. Muting to limit the duration of chords (stop their sustain) should be performed with the fretting hand, so the picking/plucking hand is free to do other things.

When possible, mute an open string with the pad of the finger on the adjacent larger string. Use straightened free fingers to mute an entire chord, such as the little finger on a D chord or the free fingers on the "A" chord barred with the first finger.

Open Position Chords Muting Exercise - [click to play video](#)

Fretting Hand Chord Muting as a Percussive Sound

Get Back intro muting - [click to play video](#)

Where the “x’s” are shown, the strings are muted.

The notation shows a guitar staff in G major (one sharp) and 4/4 time. The bass staff is in standard notation. The guitar part features a series of chords: A (1 5 1 3), I (1 1), G (1 3 5 1 5 1), I (1 3 5 1 5 1), and D (1 5 1 3). The fretting hand diagrams show the fingerings for each chord. The guitar part includes muting (x's) on the strings, indicated by arrows pointing down to the strings. The bass part includes muting (x's) on the strings, indicated by arrows pointing up to the strings. The guitar part is marked "play 3 times".

Flake full muting example - [click to play video](#)

In this example, the chords are fully muted with the fretting fingers, laying one or more fingers flat across the strings so they have no recognizable pitch. Of course, the strings are not pressed to the frets but are muted against your finger(s). Where the “x’s” are shown, the strings are muted.

The notation shows a guitar staff in D minor (two flats) and 4/4 time. The bass staff is in standard notation. The guitar part features a series of chords: Dm (1 5 1 b3 5), V (1 1), F (1 5 1 3 5 1), I (1 1), Bb (1 5 1 3), and I (1 1). The fretting hand diagrams show the fingerings for each chord. The guitar part includes muting (x's) on the strings, indicated by arrows pointing down to the strings. The bass part includes muting (x's) on the strings, indicated by arrows pointing up to the strings. The guitar part is marked "3" at the beginning of the first measure.

Stand By Me full chord muting example - [click to play video](#)

For the first mute on each chord, still fret the previous chord.

The image displays a musical score for the song "The Sound of Silence" by Simon and Garfunkel. It includes guitar and piano parts with chord diagrams and fingerings.

Guitar Part:

- Chord Diagrams:**
 - G I:** Fretboard diagram for G major (open strings, 1st fret on B, 3rd fret on D, 4th fret on G). Fingering: 1 (B), 2 (D), 3 (G).
 - Em I:** Fretboard diagram for E minor (open strings, 1st fret on B, 2nd fret on D, 3rd fret on G). Fingering: 1 (B), 2 (D), 3 (G).
 - C I:** Fretboard diagram for C major (open strings, 1st fret on B, 2nd fret on D, 3rd fret on G). Fingering: 1 (B), 2 (D), 3 (G).
 - D7 I:** Fretboard diagram for D7 major (open strings, 1st fret on B, 2nd fret on D, 3rd fret on G, 4th fret on A). Fingering: 1 (B), 2 (D), 3 (G), 4 (A).
 - G I:** Fretboard diagram for G major (open strings, 1st fret on B, 3rd fret on D, 4th fret on G). Fingering: 1 (B), 2 (D), 3 (G).
- Staff:** The guitar part is written on a single staff with a key signature of one sharp (F#) and a 4/4 time signature. It features a series of chords and single notes, with fingerings indicated by numbers 1-4.

Piano Part:

- Staff:** The piano part is written on a single staff with a key signature of one sharp (F#) and a 4/4 time signature. It features a series of chords and single notes, with fingerings indicated by numbers 1-4.

Lyrics:

5
 In the silence of the night
 I hear you singing in my mind
 And sometimes when I close my eyes
 You are close to me
 And sometimes when I close my eyes
 You are close to me
 And sometimes when I close my eyes
 You are close to me
 And sometimes when I close my eyes
 You are close to me

The chords muted by fretting hand, except at the arrow, the end of the stroke picks the sixth string while the ring finger mutes the fourth string.

The chords muted by fretting hand, except at the arrow, the end of the stroke picks the sixth string while the ring finger mutes the fifth string.

verse 1

Higher Ground muting specific strings

Strum the staccato open-strings chords with up strokes and cut their duration short by muting with the fretting hand.

Swing Eighths

"safety" muting with the thumb and fingers

It is often difficult to consistently strum only the strings intended for a chord. Of course, a strummed chord only includes consecutive strings (like the first through fourth or second through fifth strings), but you will often erroneously strum an adjacent string.

To mute the unwanted adjacent larger strings, use the fingertips and/or thumb of the fretting hand. For the unwanted adjacent smaller strings, mute with the portion of the fingers below the fingertips.

Plucking Hand Muting

limiting duration with the plucking/picking hand

Though the standard muting to stop chords should be performed with the fretting hand, you can sometimes mute with the plucking/picking hand. This is practical to use at the end of a phrase before a rest (break) when you want to make sure you are stopping the chord.

For example, in [Summertime Blues style comping](#), the “F” chord that begins a two bar rest period (other than the F chord), could be muted with the plucking/picking hand. This would assure a clean break.

I Shot the Sheriff thumb bass, index strum

The musical score for "The Wind" by The Beatles is presented in a multi-staff format. The top staff is for guitar, featuring a treble clef, a key signature of one flat (B-flat), and a 4/4 time signature. The guitar part includes a chorus section marked with a double bar line and repeat dots. Above the guitar staff, three fretboard diagrams are shown for the Gm III and Cm III chords, with fingerings indicated by numbers in circles. The guitar staff itself contains a series of chords and melodic lines, with some notes marked with a 'z' for a natural harmonium effect. Below the guitar staff, a series of arrows indicates the fretting and strumming patterns for the bass part. The bottom staff is for the bass, featuring a bass clef and a key signature of one flat. The bass part includes a series of chords and melodic lines, with some notes marked with a 'z' for a natural harmonium effect. The bass staff is labeled with 'T' for thumb-strum and 'B' for bass. The entire score is titled "The Wind" and is attributed to The Beatles.

The musical score is written for guitar and bass. The guitar part is in treble clef with a key signature of three sharps (F#, C#, G#) and a 12/8 time signature. The bass part is in bass clef. The score is divided into a verse, a chorus, and a final section. Fretboard diagrams are provided for various chords and melodic lines. The verse starts with a 'verse' label and a tempo of 114. The chorus is marked 'chorus' and includes a 'play 4 times' instruction. The final section also includes a 'play 4 times' instruction. The score ends with a double bar line.

BASS, MID, TOP (PIANO STYLE)

This imitates simple pop piano accompaniments that sequence:

1. a bass note with the piano left hand, played with thumb on guitar
2. a mid-range note with the piano right hand (usually the lower note in a triad), plucked with the index finger on guitar.
3. the remaining note or two in a three-note chord with the piano right hand, plucked with the middle or middle and ring fingers on guitar.
4. a mid-range note with the piano right hand (usually the lower note in a triad), plucked with the index finger on guitar.

Freebird bass, mid, top

The image shows a musical sequence for 'Freebird' in 4/4 time, featuring a bass, mid, and top line. The sequence is divided into two systems, each with six measures. The first system includes chords G, D/F#, and Em. The second system includes chords F, C, and D. Each chord is accompanied by a guitar fretboard diagram showing fingerings. The musical score is written in treble clef with a key signature of one sharp (F#). The guitar tablature is provided below the staff, with fret numbers and picking directions (T for thumb, A for index, B for middle/ring) indicated.

Chord Diagrams:

- G:** Fretboard diagram showing a G major triad (G-B-D) with fingerings 1, 3, 5, 1, 5, 1.
- D/F#:** Fretboard diagram showing a D major triad (D-F#-A) with fingerings 3, 5, 1, 5, 1.
- Em:** Fretboard diagram showing an E minor triad (E-G-B) with fingerings 1, 5, 1, b3, 5, 1.
- F:** Fretboard diagram showing an F major triad (F-A-C) with fingerings 1, 3, 5, 1.
- C:** Fretboard diagram showing a C major triad (C-E-G) with fingerings 1, 3, 5, 1, 3.
- D:** Fretboard diagram showing a D major triad (D-F#-A) with fingerings 1, 5, 1, 3.

TRAVIS FINGERPICKING AND PIEDMONT BLUES

Playing the notes of held chords one or two notes at a time is the basis of “Travis fingerpicking”, “Piedmont Blues” (also called “East Coast Blues”).

Travis fingerpicking is named after Merle Travis. Piedmont blues is more African American in origin. “Piedmont” refers to the Piedmont plateau region of the Appalachian, on the East Coast from Virginia to Northern Florida. The style expanded geographically to most of the Appalachians mountains.

In these styles, a bass note is generally played on every beat. Occasionally, two or more notes are played together. These styles are an evolution of Ragtime style and are more regular in their patterns than Ragtime.

Travis Fingerpicking Pedal Point Exercise in C - [click to play](#)

♩ = 100

This guitar score is for a Travis fingerpicking exercise in the key of C major, 4/4 time, at a tempo of 100 beats per minute. The exercise consists of 20 measures, organized into five systems of four measures each. The notation includes a standard musical staff and a guitar tablature (TAB) staff. The TAB staff uses numbers 0-4 to indicate fret positions and 'T' for natural harmonics. The exercise features a consistent bass line (pedal point) of alternating open strings (E and A) and a complex, rhythmic treble line. Chord changes are indicated by measure numbers and chord symbols: C (measures 3, 5, 19), Dm7 (measure 7), Em (measure 9), F (measure 11), G7 (measure 13), Am (measure 15), and G/B (measure 17). The piece concludes with a double bar line and repeat dots at the end of measure 20.

Travis Fingerpicking Melody Exercises in C and Am - [click to play](#)

This page contains 24 measures of Travis fingerpicking exercises in 4/4 time. Each measure is represented by a musical staff with a treble clef and a corresponding TAB line below it. The exercises are divided into two main sections: C major (measures 5-12) and D minor (measures 13-24). Measures 1-4 are introductory chords. Measures 5-12 are in C major, with measures 5, 6, 11, and 12 featuring a C major chord symbol. Measures 13-24 are in D minor, with measures 13, 15, 17, and 18 featuring a D minor chord symbol. The TAB lines use numbers 0-3 to indicate fret positions and include vertical dashed lines to show the timing of the fingerpicks. The exercises focus on alternating bass and treble lines, a characteristic of Travis picking.

Measures 5-12: C major exercises. Measures 13-24: D minor exercises.

Travis Fingerpicking Melody Exercises in G and Em - [click to play](#)

This image displays a series of 24 measures of Travis fingerpicking exercises, organized into six systems of two measures each. Each system consists of a musical staff in G major (one sharp) and a corresponding guitar tablature (TAB) below it. The exercises are numbered 2 through 24. Measures 15 and 17 are marked with the chord 'Am' (A minor). The notation includes various fingerpicking patterns, such as alternating bass and treble lines, and specific fingering instructions (e.g., 0, 2, 0, 1, 3, 0, 2, 3). The TAB lines show fret numbers (0-3) and picking patterns (e.g., 3, 3, 3, 3, 3, 3, 3, 3). The exercises are designed to be played in a 4/4 time signature, with a key signature of one sharp (F#).

Secondary Dominant Patterned Arpeggio Exercises

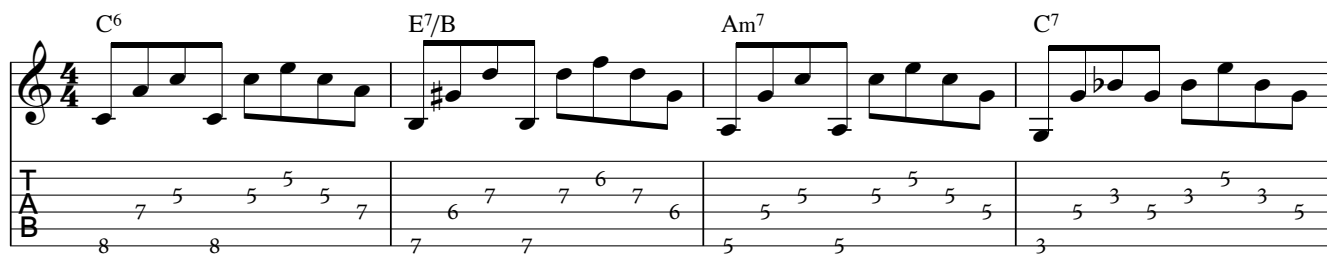

In these exercises, every second chord (E7/B, C7, A7, the seventh chords) establishes the temporary key of the chord that follows it. Songs commonly move to a temporary key in the course of the song. Each of these dominant seventh chords (E7) "setup" the movement to the new key creating a familiar two chord cadence from setup chord (E7) to target chord (Am). See the chapter "[Secondary Dominant](#)".

secondary dominant exercise 1

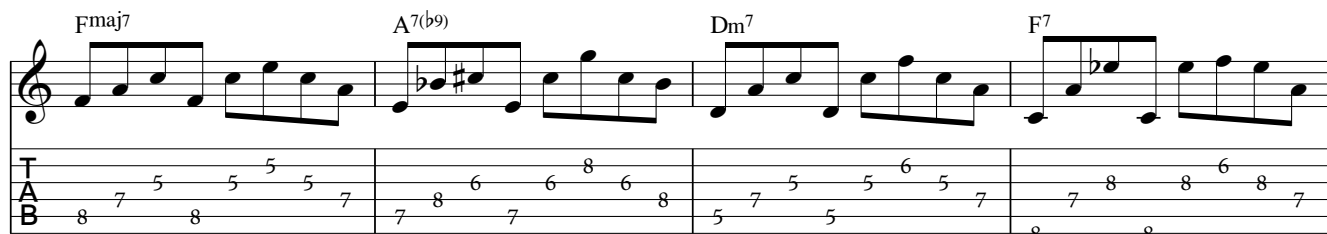

The exercise consists of four systems of music, each with a treble clef staff, a bass staff with tablature, and a grid of fingerings for the chords. The chords are: C, E7/B, Am, C7, F, A7, Dm, F7, Bb, D7, G, B7, Em, G7, C, G7, C. The tablature uses numbers 0-4 and includes triplets and slurs. The fingering grids show finger numbers 1-4 and circles indicating specific fret positions.

Can't Find My Way Home - [click to play video](#)

♩ = 140

The sheet music is arranged in two systems, each containing three staves. The top staff is for guitar, the middle for bass, and the bottom for a second bass line. Chords are indicated above the guitar staff, and fingering numbers (0-4) are provided for both guitar and bass. The key signature has two sharps (F# and C#), and the time signature is 4/4.

System 1 (Measures 1-12):

- Measures 1-4: Chords G(add9), G/B, Gm/Bb, D/A.
- Measures 5-8: Chords F, G, D.
- Measures 9-12: Chords G, A.

System 2 (Measures 13-24):

- Measures 13-16: Chords D, Em⁹.
- Measures 17-20: Chords G, D/F#, Em, D.
- Measures 21-24: Chords D⁷sus⁴/C, G/B, Gm/Bb, D.

System 3 (Measures 25-36):

- Measures 25-28: Chords F, G, D.
- Measures 29-32: Chords D⁷sus⁴/C, G/B, Gm/Bb, D.
- Measures 33-36: Chords D⁷sus⁴/C, G/B, Gm/Bb, D.

BLUES COMPING

Alternate Fifth and Sixth

Alternating the fifth to the sixth in a chord was first established in blues piano, then copied to the guitar. If you've heard much blues, you'll find it very familiar.

HARMONIZED AND WALKING BASS

With a Little Help from My Friends harmonized bass

Swing Eighth

verse

E VII B/D# IX F#m/C# IX F#m II F#m IX B VII E VII

5

chorus

D V A V E VII

bridge

C#m IX F# IX E VII D V A/C# VII

The score is written for guitar and bass. The guitar staff uses a treble clef and the bass staff uses a bass clef. The key signature is three sharps (F#, C#, G#). The time signature is 4/4. The piece is in a swing style with eighth notes. The verse consists of 8 measures, the chorus of 8 measures, and the bridge of 11 measures. Each section includes fretboard diagrams for the chords: E VII, B/D# IX, F#m/C# IX, F#m II, F#m IX, B VII, and E VII. The diagrams show fingerings for the guitar and bass. The bass line is a walking bass line, and the guitar line is a harmonized bass line.

Stir It Up bass and comping - [click to play](#)

The musical score for 'The Wind' by The Beatles is presented in two systems. The first system includes a guitar part in treble clef with a key signature of three sharps (F#, C#, G#) and a 4/4 time signature. The tempo is marked as ♩ = 95. The guitar part features a repeating melodic phrase with a 'play 4 times' instruction. Below the staff are fretboard diagrams for positions A, D, and E, each showing fingerings for the four strings. The bass part is shown in a separate staff with a tablature (TAB) system, indicating fret numbers for the left hand and string numbers for the right hand. The second system, starting at measure 10, continues the guitar and bass parts with similar melodic and rhythmic patterns, also including fretboard diagrams and a 'play 4 times' instruction.

See also [Triad Bass Harmonization](#) and [Jazz Bass Harmonization](#).

CLOSE-VOICED TRIADS

In comping, three-note close-voice triads are effective in making a concise chord sound that is easy to hear in an arrangement. A progression of close-voiced triads can be used with a constant pedal point bass note, See the chapter "[Pedal Point Progression](#)".

See the chapter "[Full-Fretboard Chord Tones](#)"/[Close-Voiced Three-Note Triads](#) and the chapter "[Fingering Common Chords](#)"/[Three-Note Chords](#).

OPEN-VOICED TRIADS

As with close-voiced triads, three-note open-voice triads are effective in making a concise chord sound that is easy to hear in an arrangement and they span a wider range of pitch, sounding "big".

See the chapter "[Full-Fretboard Chord Tones](#)"/[Open-Voiced Three-Note Triads](#). See the chapter "[Fingering Common Chords](#)"/[Three-Note Chords](#).

VOICE LEADING AND CADENCES

See the chapter "[Voice Leading](#)".

PEDAL POINT PROGRESSION AND CLUSTER PLAYING

See the chapter "[Pedal Point Progression](#)"/[Modal Triad Improv And Cluster Playing](#).

Pride and Joy, end of intro

Hide and say, end of intro

The musical score for 'Hide and say, end of intro' is presented in two systems. The first system contains measures 60 through 64. Measure 60 is a whole rest. Measure 61 features a B7 chord and a triplet of eighth notes (G4, A4, B4). Measure 62 has an A7 chord and a triplet of eighth notes (C5, B4, A4). Measure 63 has an E7 chord and a triplet of eighth notes (G4, A4, B4). Measure 64 has a B7 chord and a triplet of eighth notes (G4, A4, B4). The second system contains measures 65 through 68. Measure 65 has a 2/4 time signature and a triplet of eighth notes (G4, A4, B4). Measure 66 has a 2/4 time signature and a triplet of eighth notes (G4, A4, B4). Measure 67 has a 2/4 time signature and a triplet of eighth notes (G4, A4, B4). Measure 68 has a 2/4 time signature and a triplet of eighth notes (G4, A4, B4). The tablature for the guitar is shown below the staff, with fret numbers and bar lines corresponding to the notes in the melody.

CONTRARY MOTION ENDINGS

Contrary Motion

The score is written for guitar (T) and bass (B) in the key of E major (three sharps). It consists of six systems of music, each with a guitar staff and a corresponding bass staff. Chord symbols are placed above the guitar staff, and fret numbers are written below the strings. Measure numbers are indicated at the start of some systems.

System 1 (Measures 135-136): Chords: E, E⁷, A⁷, B^{b9}, B⁷, A, Em, B. Measure 135 starts with a whole rest on guitar and a half note on bass.

System 2 (Measures 137-140): Chords: E, E⁷, A⁷, B^{b9}, B⁷, A, Em, B. Measure 137 starts with a half note on guitar and a whole note on bass.

System 3 (Measures 141-144): Chords: E, E⁷, A⁷, B^{b9}, B⁷, A, Em, B. Measure 141 starts with a half note on guitar and a whole note on bass.

System 4 (Measures 145-149): Chords: E, E⁷, A⁷, A^{#dim7}, B, C^{#m7}, Ddim⁷, B⁷/D[#], E⁷, E⁹, A⁹, A^{#dim7}. Measure 145 starts with a half note on guitar and a whole note on bass.

System 5 (Measures 150-153): Chords: B⁷, E, E⁷, C^{#m7}, B⁷, G^{#dim7}, B⁷/F[#]. Measure 150 starts with a whole note on guitar and a half note on bass.

System 6 (Measures 154-157): Chords: E, E⁹/G[#], A⁷, B^{b9}, B⁷, C⁷, B⁷, E, E⁷, A, C⁷, B⁷, A, Gdim⁷, B⁷/F[#]. Measure 154 starts with a half note on guitar and a whole note on bass.

Keeping Time

- **Multiple Perspectives**
- **Meter Your Time**
- **Keep the Meter Running**
- **Count, Vocalize, Hear**
- **Sing the Part**
- **Build Memories of Rhythms**

When James Earl Jones was in elementary school he started to study acting to overcome a speech impediment. He was so successful in overcoming it that he became a world-renowned speaker. If you don't feel capable in the area of rhythm, you can do that with your rhythm. If you have a weakness in rhythm (or any area of your playing), work on it intensely and intelligently, so you are known for your expertise rather than weakness in that area.

MULTIPLE PERSPECTIVES

As with most of my pedagogy, I'm using multiple perspectives to strengthen your rhythm. One or another of them may be more relevant in the particular situation.

METER YOUR TIME

play with a metronome

The old-school mechanical metronome has traditionally trained musicians to play with even time. It is a very necessary skill. You need to know even time as a point of reference. You need to communicate a tempo to the musicians you are playing with and "lock" into the same pulse. You also need to communicate the pulse or beat to the listener, so you play what they expect.

The tempo is not always consistent. Sometimes the music is intentionally played at increasing or decreasing tempos. Even between musicians playing at the same tempo can intentionally vary the *placement* of the beat. A drummer may play *ahead* of the beat (before it) to make the music feel aggressive or *behind* it to make the music feel relaxed. We're really splitting hairs here. This involves a small percentage of the tempo.

Swing eighths are interpretations of half beats where the first "half" is changed to two thirds and the last "half" to one third. So, you can conceive the beat as a triplet, where you are playing on the first and third part. This is a starting point. You can change this ratio anywhere from 50% to 75%. Closer to 50% (like 60%) is called *light swing*. Closer to 75% (like 71%) is called *heavy swing*.

I used to practice light and heavy swing by tilting my Seth Thomas pyramid-shaped metronome (maybe you've seen one in a museum, ha,ha) by putting a thick pencil eraser closer or further away from the outside edge. Crude, but functional.

It is essential to play both with a metronome and other musicians (separately), so you know even time and how to flexibly interpret it.

play with a looper rhythm track

Playing with a looper is ideal to practice with an accompaniment by yourself. You will get practice in comping as you record the part. Make sure the looper has quantization, so you can easily make seamless loops. My favorite looper is the Boss RC-3 with the FS-5U accessory (two standard-length guitar cables and a third cable six inches or less one to connect the two devices).

You can also buy rhythm tracks (many are included with this course) or use iReal Pro on Mac, iOS or Android.

Playing with a looper or rhythm track is better than a metronome, but usually not as much of a challenge on your being interactive as playing with people. Software rhythm tracks are very useful when you can loop any desired section of the music you need work on.

Rhythmic Levels

Practice individual components of the rhythm separately when your part is an ensemble part, such as bass and strum. For example, you may combine the guitar and bass for the intro to Californication. Practice just the guitar part, then just the bass part, then combine them. See [Rhythmic Layers](#).

memorize the tempo

Tempo is measured in beats-per-minute. iTunes actually has a BPM field you can make visible and plug-ins allow you to tap and register BPM or some even analyze the music and give you a read-out.

It's very useful to be able to identify the tempo of a piece by ear so you know what sorts of memorized rhythms will fit and what you are technically capable of (see think in notes per minute, below). After decades of four or five nights a week playing top forty gigs, my friend Kevin had played most common instruments on the job. He amazingly could ask you to say "go" while watching a second hand on a watch (out of his view, of course) and he would tell you when one minute was up with accuracy of less than one second! The most common tempo in American music is 120 beats-per-minute, so he was thinking two beats per second and using his memorized 120 BPM.

be able to think in notes per minute

Notes per minute gives you a common perspective on how fast you are playing. At 120 beat per minute, quarter notes are 130 notes per minute (NPM), eighth notes are 260 NPM, eighth-note triplets are 390 NPM and sixteenth notes are 520 BPM.

Generally, people think of over 500 notes per minute as "fast" and exciting. So, if you are not capable of playing over 520 notes per minute, don't try to play sixteenth notes at over 130 BPM ($4 \times 130 = 520$). In developing your technical speed, it's very useful to know how many notes per minute you can play each element of your soloing or comping. For example, people like to hear you play "fast" in at least part of your performance.

KEEP THE METER RUNNING

Changes of Time Signature Usually Don't Change the Tempo

Most pop songs retain the tempo throughout. They may double or halve the tempo, but rarely anything else. The examples in this section involve change of time signature where the tempo remains the same.

Changing 4/4 Straight or Swing Eighth to 12/8

The numbered beats should remain evenly-spaced in time. 12/8 is a compound time signature. It is usually thought of as four beats with three eighth notes on each of the four beats. Each of the four groups of three eighth notes in the 12/8 parts of the example below are counted "1-2-3", emulating four beats with three eighth notes on each. [click to play](#)

♩ = 100 Straight Eighths

1 + 2 + 3 + 4 + 1 + 2 + 3 + 4 + 1 2 3 1 2 3 1 2 3 1 2 3 1 2 3 1 2 3 1 2 3

♩ = 100

Swing Eighths

1 + 2 + 3 + 4 + 1 + 2 + 3 + 4 + 1 2 3 1 2 3 1 2 3 1 2 3 1 2 3 1 2 3 1 2 3

Changing from Quarter Notes to Quarter Note Triplets

on beats one or three in 4/4

on beats two or four in 4/4

COUNT, VOCALIZE, HEAR

“Map Out” the Time

Conceive the beat subdivisions, get the math. If we can sense the beat or pulse rate, we can easily divide each beat or pulse into two, three or four parts. There are three math operations in rhythmic music notation: halving and doubling, dotting (multiply by 1.5) and triplets. Triplets divide a time period into a different number of equal parts than originally planned.

mark your sheet music

If you use printed sheet music and can write on it (preferably in pencil for edit ability),

write dotted vertical lines in the tab

Segregate the beats in tablature by drawing dotted vertical lines between the beats. Of course, this is not necessary at the bar line between the last beat of one bar and first beat of the next, where there is already a bar line.

If reading a piece with plucked bass notes mixed with plucked notes on the smaller strings, drawn vertical lines separating the beats can be very helpful. Even though I am an experienced reader drawing “beat divider” lines (or imagining them) makes the piece much easier to work out rhythmically.

The bass part typically plays on every beat, on the numbered beat. In this case, the options for each beat are:

- “both” - bass and a treble note or chord (on the smaller strings) played together
- “both-top” - a bass note on the beat followed by a treble note on the offbeat (and)
- “top” - a treble note or treble chord (on the smaller strings) played alone
- “bass” - a bass note played alone

Actually speak these words as you play the part below.

Swing Eighths

Am Em/G C F Dm

both top bass top both top both top both bass top both top both top

3 F G(sus4) C G Am E7 Am

bass top both top both top none top bass both both both both

Step Time

Counting in “step time” you are allowed to slow down or pause while playing a part because you are speaking counting syllables to note where you are in time. Demonstrating to someone else, your counting syllables can show where every note goes in time without yet keeping even time. As you repeat the part you are practicing, make your time progressively more even as you play repetitions of the phrase. Step time can clarify pitches and time mapping. Be careful to not take too long before starting to establish a regular tempo, or you may subconsciously memorize an incorrect rhythm that you are practicing.

Transistion from Counting to Hearing Rhythm

“Count and clap” means to count the beat in numbers and subdivisions (“1 and 2 and”, etc) and clap the rhythm for the musical part, clapping each event at the right time.

Vocalizing the part with “ums” is useful when the rhythm is selected from a regular pulse like all half beats. On each half beat, sing “ba” for a note and “um” where a note is not to be played. A more advanced version of this vocalization could include surging your voice to sustain the “ba” immediately before with “aa” and by singing “bop” instead of “ba” when the next event will be a silence (“um”).

Transition from (1) count and clap to (2) vocalize while playing (ba, um) to (3) fade out the ums and begin to get an auditory image “hearing the sound of the rhythm” with a metronomic sense from steps 1 and 2.

Learn to change rhythmic level (see “the counting game” in [Rhythmic Words and Comping](#)) and avoid fatigue by counting fewer subdivisions when appropriate.

SING THE PART

Sing What You Play

Sing the part as you play, focusing on your vocal mechanism, not the mechanics of your guitar technique at the necessary possible expense of technical errors on the guitar. Sing the part with note names, key scale-tone numbers, vocalization (ba, um), as described below.

Play What You Sing

Turning the process around can be very useful, too. You will often learn melodic structures kinesthetically and graphically on the guitar. You may be able to conjure up some melodic phrases on the guitar more easily than with your voice. In such cases, copy what you play on the guitar with your voice.

Seeing the graphics of playing a part on the guitar or piano is very helpful in getting a part in mind. Vocalists should play what they sing on an instrument to make it more clear to themselves that their voice is an instrument that “plays notes”.

Sing the Part with Letter Names

Singing the part with letter names can help you memorize the melody and the location of the notes on the guitar. When notes have sharps or flats, you can omit singing the word “flat” or “sharp” if there is only one version of the letter involved.

Sing Key Scale-Tone Numbers

I have always preferred singing in numbers to solfeggio, the “do, re, mi” system. If you know one of the solfeggio systems and are comfortable with it, use it, of course. If not, you may want to try my “number-feggio” system, shown below.

numberfeggio

Arabic number	solfeggio			numberfeggio		
	solfeggio	solfeggio flat (pronunciation)	solfeggio sharp (pronunciation)	sung number	sharp number	flat number
1	do	di (die)	(not needed)	one	wine	(not needed)
2	re	ri (right)	ra	two	tie	taough
3	mi	(not needed)	ma	three	(not needed)	thra
4	fa	fi (fee)	(not needed)	four	fire	(not needed)
5	sol (soul)	si (sigh)	se (say)	five	feeve	fav
6	la	li (lee)	le (lay)	six	seeks	sax
7	ti	(not needed)	ta (tay)	sev	(not needed)	salve

It's more important to communicate the thought of a musical part to the listener than the actual sound. They can "hear" what you are thinking if you communicate well.

Fade from Air Guitar to Real Guitar

Sing the part without playing guitar. Get it in your mind first. While singing the part, gesture it with "air guitar", not actually touching the guitar. This assures that you are thinking the part. When learning a part on the guitar, the mechanics of performing the part can distract you from the correct rhythm, though you could think the rhythm without the guitar physically involved.

As you repeat the part, gradually touch the guitar more and more until you "fade in" your physical connection with the guitar and retain your focus on the rhythm. You should probably record yourself to verify your rhythmic accuracy. It is often surprising how your rhythm is not perfect when your mind is on the strings and frets.

It is very effective to make a multi-track recording and put the part you are learning on a reference track and record yourself mimicking it on another track. Make sure you can hear the reference track and your guitar easily while you record. Then play back the recording and pan the reference track full left, your guitar full right and balance them so you can clearly hear both. Any necessary corrections in your performance will probably be obvious.

BUILD MEMORIES OF RHYTHMS

Model Rhythms

“Model” rhythms you have in memory, such as military snare. Jimi Hendrix seems to be recalling the military snare he heard when he was in the army in the intro to Voodoo Child Slight Return.

Use a “Keeping Time Rhythm” As a Reference

Play with the original recording: focus on “keeping time” rhythms like hi-hat, ride, walking bass or “pumping” bass (The Pump by Jeff Beck, many Satriani songs like Surfing With the Alien)

Memorize Rhythms

rhythmic words

Rhythmic words are the rhythmic syllables that build rhythms. See [Rhythmic Words and Comping](#). By memorizing the most common rhythmic words, you have building blocks to conceive rhythms.

comping rhythms

Memorize comping rhythms as models. Get especially proficient at [Varying Rhythms](#).

Establishing a Key

- **Key Defined**
- **Beginning Modal Improv**
- **Melodic Emphasis**
- **General Means of Establishing a Key**
- **Establishing Keys with Major Scales**
- **Establishing Keys With Melody and Chord Progression**
- **Relative Major and Minor Keys on Steps One and Six**
- **Using Key on One with Altered Tones**

KEY DEFINED

What does that mean a song is said to be in a key? It means there is a main note that is the focal point of the whole piece of music. It can be defined in various ways, but a favorite is: “the root of the chord you would expect the piece to end on (in a traditional sense, as in the common practice period of classical music from 1600 to 1900)”.

A chord “root” is the lowest imaginable note in a chord. You can play a “C” major chord with a “G” in the bass (one of its three notes), but if you imagine the lowest note played in the bass in a classic ending, the lowest imaginable note would be “C”. For common chords (triads,, sevenths, ninths), organizing the notes of the chords in thirds (F-A-C-E-G-B-D-F, etc.) would show the chord root as the lowest pitch.

C with G or its root “C” in the bass [link to video](#)

C/G

C major chord with "G" in the bass

C major chord with the root "C" in the bass

T A B

authentic and deceptive cadences

What is meant by “you would expect the piece to end on”? A cadence is a chord progression of two or three chords that establishes a key or temporary sense of key. An authentic cadence sounds finished and progresses from a chord built on the fifth step of the key (G major) to one built on the first step (C major). A deceptive cadence can end on an unexpected chord, like ending on an “F” chord in the key of “C”. In a deceptive cadence, the melody usually ends on a note that is in the expected chord *and* in the alternate chord.

In the Deceptive Cadence example below, the melody progresses to the note “E” at the C#m chord, where you would have expected an E chord. The melody note “E” is ambiguous, since it is in E and C#m. This progression to C#m is a deceptive cadence. The piece ends with an authentic cadence, repeating the last phrase ending on “E” in the melody, this time on the expected “E” chord.

deceptive cadence [link to video](#)

The image displays three systems of musical notation for guitar, illustrating deceptive and authentic cadences in the key of E major (three sharps: F#, C#, G#).

System 1: Shows a sequence of chords: E, G#m, A, B(sus4), E, G#m, A, B7. The notation includes a treble clef staff with notes, a bass staff with fret numbers, and a guitar tablature staff with fingerings (T, A, B). A deceptive cadence is indicated by a bracket over the final two measures (A and B7).

System 2: Shows a sequence of chords: E, G#m, A, B(sus4), A, B7, C#m. The notation includes a treble clef staff with notes, a bass staff with fret numbers, and a guitar tablature staff with fingerings (T, A, B). A deceptive cadence is indicated by a bracket over the final two measures (B7 and C#m).

System 3: Shows a sequence of chords: A, B7, E. The notation includes a treble clef staff with notes, a bass staff with fret numbers, and a guitar tablature staff with fingerings (T, A, B). An authentic cadence is indicated by a bracket over the final two measures (B7 and E).

Deceptive cadences have been used often enough in pop music the twentieth century and later that it may be difficult to conceive an authentic cadence that ends on the chord the key is named after. To gain this sense of a final ending, listen to old music from the baroque and classical period of western art music. For the baroque period, listen to music by Antonio Vivaldi, Johann Sebastian Bach and George Frideric Handel. For the classical period, listen to Joseph Haydn, Wolfgang Amadeus Mozart and Ludwig van Beethoven.

BEGINNING MODAL IMPROV

Let's make modes tangible and have fun along the way! See also [Modes](#); [Key Scales](#), [Parent Scales](#) and [Chord Scales](#); and [Parent Scale Improv](#). During the course of the exercises in this section, play along with the tracks linked below:

I - C major (Ionian)

II - D Dorian

III - E Phrygian

IV - F Lydian

V - G Mixolydian

VI - A Aeolian

VII - B Locrian

Locate the scale with the fingerings below so "1" on the sixth (largest) string is on "C" (little finger) at the eighth fret.

Perform the steps listed below for each of the modes shown above.

Begin with C major. Locate the notes on the I major diagram below so "C" is on "1", which would place it at the sixth string, eighth fret, fretted with your little finger. Each of the six other modes, D Dorian through B Locrian would use the same C major scale, but each would be focused on a different number. D Dorian focused on "2", E Phrygian focused on "3" and so on.

1. Play the triad arpeggio. Each of the modes is based on a triad. Modes I, IV and V are based on a major triad. Modes II, III and VI are based on a minor triad. Mode seven is based on a diminished triad. For each mode, the triad it is based on is shown by notes with a black-circled background. Ascend and descend all the black-backed notes in the mode with even rhythm, playing all the notes clearly and legato (long, with minimal silence between notes). Count "1-2-3-4" repeatedly while listening to the track, labeling the four beats in each bar. Play only as fast as you can clearly with a steady rhythm. Play one note every two beats, one note a beat or two notes a beat, whatever is practical according to your current ability.

2. Sing a triad melody aloud or in your mind. Choose three or four consecutive black notes that you can sing, or at least think the pitches. Verify that you are thinking each of the notes by singing or thinking it before you sound it on the guitar, then sounding it on the guitar to verify. Once you can predict the sound of the three or four consecutive black notes you have chosen, go about applying a simple rhythm to them and make a theme of four or so notes. Give it a good try, but if you find this difficult, don't worry we'll come back to it later, better-prepared.
3. Play the pentatonic scale. Each of the modes contains a pentatonic scale of the same quality as its triad. Modes I, IV and V are based on a major pentatonic scale. Modes II, III and VI are based on a minor pentatonic. Mode seven is based on a minor pentatonic scale with a flat five. A minor triad with a flat five is diminished. For each mode, its pentatonic scale is shown by the combination of notes with a black-circled background and those with a gray-circled background.

Like with the triad in step 1 above, ascend and descend the pentatonic scale with an even rhythm and with legato. Get in the habit of beginning each scale passage at any whimsical point in the scale. Also, get comfortable with changing direction from ascending to descending whimsically.

4. Emphasize a triad tone in the scale by sustaining it. As you ascend and descend the scale, periodically come to rest on a black note (a triad tone), which will strengthen the listeners concept of key for the mode you are playing in. The key triad should be regularly sounded to reinforce its sound for the listener, giving an aural sense of focus on that chord as a key. We will go over the many melodic devices to emphasize and bring attention to a note or group of notes, now starting with sustaining a note. Later, you will learn to continue the emphasis of the key triad, while simultaneously emphasizing the notes of another chord in the progression that is note the key chord (tonic chord, such as C major triad in C major mode).
5. Emphasize a triad tone in the scale by ending on a black tone without sustaining it. It will sustain in the listener's memory and have much the same effect as having been physically sustained.

See [Melodic Emphasis](#) for additional methods of emphasis

Three Important Elements To Incorporate Into Your Improvisation

think vocally

Learn the sound of the notes by singing them. Then construct a short phrase in your mind, copying it to the guitar. Drive the guitar with your mind, don't let the graphics on the guitar drive your melody. The graphics should just be an aid.

be inventive rhythmically

Strum a muted rhythm, then pick it on a single note. Next apply the rhythm to changing notes on one string, then apply it to changing notes between two strings, then to a scale or arpeggio.

think like composer

Find the seed for melodic idea that you like. It may be the replication of something you heard before or a new creation. Develop it with harmonic (pitch) theme and variation and with rhythmic theme and variation.

MELODIC EMPHASIS

Why Emphasize Certain Tones

Emphasize tones to keep them in mind as the tone center of the piece of music, part of the key chord or as part of the current chord. The tone center is the note that is the main focal point of the piece of music. The tonic chord is the chord we hear recurring throughout a piece of music and expect the piece to end on. When the current chord is not the tonic chord (such as the current chord Dm in the key of A minor), there are two focal points, the less important current chord (Dm) and the more important tonic chord (Am), both of which should be represented.

How To Emphasize Tones

The various melodic devices below are used to bring attention to notes that are in the tonic chord or in the current chord.

Sustain it.

End a phrase with it. Even if the last note in a phrase is of a short duration, it will sustain in the listener's memory.

Play it repeatedly or more frequently.

Play it on the beat, especially on the first beat (or on the third beat in 4/4, with lesser effect). See [Relating Chord Tones to the Beat](#).

Play it louder.

Draw attention to it with ornamentation. Bends, hammers, pull-offs, slide. Incorporate mordents and turns.

Use pickups and pushes or change of rhythm to draw attention to it.

Pickups can be one or more notes of equal value or can be an irregular rhythmic word, like the Creedence.

Pushes can be rest pushes or sustain pushes

Change of rhythm, such as changing from eighth notes to quarter note triplets to draw attention to a note following the triplet.

Pivot tone. Alternate from the emphasized note to ascending or descending scale or arpeggio.

Establish the emphasized note as part of a chord. This can establish a chord different from that in the comping. For example, establish a Cm6 during a Cm7 chord.

Contrast with Non-Chordal Tones

To add contrast, occasionally end a phrase with a non-chordal tone, followed by a variation of the same phrase that does end with a chord tone (pitch-wise right next to the non-chord tone you ended the last phrase).

Develop Themes (Licks)

Dabble with a small number of lick and theme ideas, then focus on one of theme and develop it into a theme and variation set that you memorize.

GENERAL MEANS OF ESTABLISHING A KEY

Establishing The Tone Center

Different devices in the music can contribute to establishing a key. The key may temporary and is the root of a primary chord. The key is usually established by more than one device. Each device draws attention to the tone center. The devices that can establish a key include:

- ✦ **Using a tonic scale.** Making melody with a scale named after the tone center
- ✦ **Play it louder.** Playing the tone center louder or more often than other notes
- ✦ **Sustain it.** Sustaining the tone center or ending a phrase with it
- ✦ **Pivot tone.** Using the tone center as a pivot tone, where the melody alternates between it and other notes (see [Melodic Cells/Pivot Tone](#))
- ✦ **Establish a tonic chord.** Establishing the tone center by establishing the tonic chord in these ways (see [Establishing the Key With Chord Progression and Cadences](#) and [Modes](#)) :
 - ✦ **Starting with** the desired key chord
 - ✦ **Ending with** the desired key chord
 - ✦ **More frequent occurrence** of the tonic chord
 - ✦ Using the tone center as a **pedal point**, which is a sustained note, usually in the bass (see [Pedal Point Chord Progression](#))
 - ✦ **Resolving to the tonic chord with a cadence** (a well-known chord progression used to lead to a tonic chord). See [Secondary Dominant](#).
- ✦ **Scalar chord root movement.** A progression of chord roots up or down a scale to the root of the intended tonic chord.
- ✦ **Dissonance.** Preceding the intended tonic chord by one or more dissonant, tension-producing chords.
- ✦ **Low-pitched tonic root.** Use the root of the main chord in a low range of pitch.
- ✦ **Define a section with it.** Ending or beginning a section with a chord, where sections are typically multiples of four measures. Ending with the desired tonic chord establishes stronger tonality than beginning with it.

ESTABLISHING KEYS WITH MAJOR SCALES

Melodies, chords, scales and chord progression can be expressed in terms of pitch by relating the notes to a major scale in the key of the melody or chord progression or in the key named after the chord or scale. You can read about this in [Note Sets, Structure And Design](#).

The common initial illustration of key with a major scale is done by playing the major scale up and down for an octave, optionally followed by a three-note chord made of steps one, three and five of the scale (every other note). That example is shown below in C, G and F major. Play the example on your guitar and play the video tab in your browser, if you can. You should be able to hear the relationship between each chord and the scale of the same name. Each chord (C major triad) should serve aurally as a summary of the scale (C major scale). This relationship is the basis of keys.

ESTABLISHING KEYS

WITH MELODY AND CHORD PROGRESSION

Melody is an expression of both the chord progression and the scales named after the key that are used in each section of music. It brings attention to the tones of a main chord more than the other chords. It establishes the key best when melody is made primarily of scales named after the key, such as C major pentatonic scale, C Mixolydian and C major scale all used during a piece in the key of C.

C key scales establishing a melody in the key of C [link to video](#)

The musical notation is presented in three systems, each with a melody line, a guitar fretboard diagram, and a bass line.

System 1: The melody line starts with a whole rest, followed by a half note G4, a quarter note A4, and a quarter note B4. The guitar fretboard diagram shows the first four frets of the guitar. The bass line starts with a whole rest, followed by a half note G2, a quarter note A2, and a quarter note B2.

System 2: The melody line starts with a whole rest, followed by a half note G4, a quarter note A4, and a quarter note B4. The guitar fretboard diagram shows the first four frets of the guitar. The bass line starts with a whole rest, followed by a half note G2, a quarter note A2, and a quarter note B2.

System 3: The melody line starts with a whole rest, followed by a half note G4, a quarter note A4, and a quarter note B4. The guitar fretboard diagram shows the first four frets of the guitar. The bass line starts with a whole rest, followed by a half note G2, a quarter note A2, and a quarter note B2.

Chord Progressions: C6, Dm7, G, D9, Dm7, G13, C6

Scales: C minor 6/9 pentatonic scale, C Mixolydian scale, C minor 6/9 pentatonic scale, C major scale

Chord Scales Are Less Effective in Establishing an Overall Key

When scales in many keys are used, each named after the key of a different chord, you are not continually reminded of the key as you would be with the primary use of key scales. This weakens the sense of key. I call a scale named after a chord a *chord scale*.

chord scales weaken the key [link to video](#)

The musical notation is presented in three systems, each with a treble clef, a 4/4 time signature, and a bass line. The scales are labeled as follows:

- System 1:** C⁶ (D minor pentatonic scale), Dm⁷ (G major pentatonic), G.
- System 2:** C⁶ (C minor 6/9 pentatonic scale), D⁹ (D minor pent.), Dm⁷ (G major pent.), G¹³ (C major pentatonic), C⁶.

The notation includes a treble clef, a 4/4 time signature, and a bass line. The scales are labeled: D minor pentatonic scale, G major pentatonic, C minor 6/9 pentatonic scale, D minor pent., G major pent., and C major pentatonic.

Establishing the Key With Chord Progression and Cadences

The *tonic chord* represents the tonal focal point in a piece of music. It is expected the piece will end on the tonic chord, although a [deceptive cadence](#) may prove otherwise. Elements of chord progression can contribute to establishing a sense of key, including:

- starting with the desired key chord
- ending with the desired key chord
- more frequent occurrence of the tonic chord
- a pedal point (repeating a note) in the bass on the root of the desired key chord
- resolving to the tonic chord with a cadence

Any and all of the above elements can be used in combination to strengthen the expected resolution on the tonic chord. [link to video](#)

RELATIVE MAJOR AND MINOR KEYS ON STEPS ONE AND SIX

For over five hundred years, Western (European) music has predominantly used steps one and six of the major scale as focal points. When scale tone one of the major scale is used as a focal point, the scale is said to be major or *Ionian mode*, its name in the modified Greek system of modes. When scale tone six is the focal point, it is called *Aeolian mode*.

Major (Ionian) Mode on Step One

The earlier section [Establishing Keys With Major Scales](#) demonstrated the illustration of a key with a major scale, by playing up and down an octave and sounding a chord by sustaining its first, third and fifth scale tones together. In the chapter on [Modes](#), you'll learn that this can be done with any of the seven scale tones of the major scale or with three other seven-tone (heptatonic) scales.

Aeolian Mode on Step Six of the Major Scale

As with major mode on step one, Aeolian mode can be established as a scale with a sense of key on the sixth step of the major scale by playing step six to six up and down an octave. Likewise, you can sustain a three-note chord made with every other tone ascending from six: scale tones six, one and three sustained together (one is the same tone as eight, so 6-1-3 is every other numbered tone).

The major scale and the scale built on its sixth step are referred to as relative major and minor and are most common modes of the major scale.

relative G major and E minor [link to video](#)

G major scale **G major triad**

numbered scale tones 1 2 3 4 5 6 7 1 2 3 4 5 6 7 1

E Aeolian mode (G major from scale tone six to six) **E minor triad**

6 7 1 2 3 4 5 6 5 4 3 2 1 7 6

USING KEY ON ONE WITH ALTERED TONES

With the African-American influence in the last two hundred years (especially since the late nineteenth century), the scales have been modified with flatted notes for expression. The African-American musicians and composers specifically flatted the seventh and third of major scales, bringing back some of the modes that were used from 400 A.D. to 1500 A.D.

Key Signatures

- **The Purpose of Key Signatures**
- **Five Steps to Memorizing Key Signatures**
- **12 Steps to Memorizing Key Signatures**

- **Conceiving and Writing Key Signatures**
- **The Relative Major and Minor System**
- **The Cycle of Fifths**
- **Q&A on Key Signatures**

THE PURPOSE OF KEY SIGNATURES

Standardizing Major Scales

In music, our tonal system is based on the major scale. We relate the notes of other scales, of chords and melodies to the major scale, using it as a point of reference.

Key signatures standardize scales so every major scale uses the same seven letters and has the same intervals from step to step. Every major scale uses each letter only once.

An interval is the distance between notes, measured in steps or frets. A whole step is equal to two frets. A half step is equal to one fret. A major scale spans or “scales” an octave with a particular combination of intervals.

The intervals in every key are whole steps (two frets, leaving an “empty” fret between them) from each numbered tone to the next in numbered order, except steps three to four and seven to one are a half step (one fret, with no note between them).

lettered note spacing

Lettered notes differ in distances on the fretboard. B to C and E to F are a half step apart (one fret, with no note between them). All other alphabetical pairs of notes are two frets apart (two frets, leaving an “empty” fret between them), including “G” to “A”, where the musical alphabet starts over.

Look up and down any string on the fretboard diagram at the right to see this spacing between letters.

See also [Numbered Note Spacing](#).

accidentals (sharps, flats and naturals)

Sharps (#), flats (b) and naturals (♮), are called accidentals. They are placed before a written note in and spoken (or read) after a letter name to indicate an alteration of the note.

The flat (b) placed before a written note (see above) or after a letter name (see below) indicates that the note should be played 1 fret (one half step) lower than the original note.

The sharp (#) placed before a written note (see above) or after a letter name (see below) indicates that the note should be played 1 fret (one half step) higher than the original note.

The natural (♮) placed before a written note (see above) or after a letter name (see below) indicates that a previous sharp or flat on the note is cancelled and the note is played unaltered.

The seven letters A-B-C-D-E-F-G are used to name musical notes. Each letter may include a sharp or flat in its name. Each major scale has specific versions of each letter, such as in the examples below.

C major scale, no sharps or flats

10 7 9 10 7 9 11 7 11 9 7 10 9 7 10

the major scale pattern (numbered note spacing)

Major scales have fixed intervals (distances) between notes. This universal pattern can be seen by numbering the tones of the major scale.

The diagram at the right is movable. In the key of “F”, the “1” on the sixth string at the top left of the diagram would be at the first fret on the note “F”. In “G”, the “1” on the sixth string at the top left would be at the third fret, on the note “G”.

See also [Lettered Note Spacing](#).

The major scale is spaced as follows:

major scale tone	1	2	3	4	5	6	7	1
steps apart		1	1	1/2	1	1	1	1/2
frets apart		2	2	1	2	2	2	1

Correcting the Letter Intervals with Sharps and Flats

In the key of “C”, steps three to four should be a half step and they are, since “E” to “F” (the third to fourth letters alphabetically in the C scale) are also a half step (one fret) apart. Likewise, in the key of “C”, steps seven to one should be a half step, and they are, since “B” to “C” are also a half step apart. Sharps and flats adjust the intervals for all the other keys, where letters would not be the correct interval (distance) otherwise.

key signatures don't mix sharps and flats

Key signatures adjust the intervals of the major scale (if necessary) with sharps or flats, but don't mix them. They have one to seven sharps or one two seven flats. In the case of C major, the key signature has no sharps or flats, as noted above.

F major needs B flat

Each of the intervals from one letter to the next in the F major scale conforms to the numbered pattern for a major scale except “A” to “B”, the third to fourth letters should be a half step. “A” to “B” is a whole step. By flattening the “B” the interval from “A”, the third step to “Bb” (B flat, at the circle), the fourth step is a half step, as it should be. Also, with “B” to C as four and five, they would only be a half step. Flattening the “B” makes four to five (“Bb” to C”) a whole step, as it should be.

G major needs F sharp

Each interval in alphabetical order in the G major scale conforms to the numbered pattern for a major scale except “E” to “F”, the sixth to seventh tones should be a whole step and “F” to “G” the seventh and eighth tones (the eighth tone is the same name as the first, “G”) should be a half step. By sharpening the “F”, the sixth to seventh is a whole step (“E” to “F#”, at the circle) and the seventh to eighth tones are a half step (“F#” to “G”).

twelve different keys by sound

Twelve different configurations of half and whole steps between alphabetically lettered notes can be indicated with key signatures. Each of the twelve produces the same intervallic pattern of steps and half steps. This pattern is shown in the circle on the next page. To the left of each fretboard diagram, an example of the scale is indicated on the sixth string for one octave.

A key signature is one or more accidentals shown on the staff to indicate the major or minor scale used in the piece of music. It contains (1) one or more sharps, (2) one or more flats or (3) no sharps nor flats (which is the key signature for “C” major or “A” minor).

Each key signature creates a pattern of half and whole steps between an alphabetical sequence of notes. With every eighth note, the alphabetical pattern repeats. Each eight note alphabetical sequence represents a scale. The scale types are determined by their step to step intervals.

enharmonic keys

There are more than twelve keys if you include enharmonic keys, which provide alternate letter names for the same major scale by sound. F sharp major and G flat major have the same pitches, but alternate names. C sharp major and D flat major likewise have alternate names for the same pitches.

A song may have a section in C sharp minor, which uses the E major key signature with four sharps. If the same piece of music had another section in C sharp major, you may want to use the C sharp major key signature with *seven* sharps, instead of its equivalent Db major with five flats, just so you're always thinking in the key of "C#", minor or major.

Guitarists tend to use sharp keys, since keys named after the open strings all use sharps, not flats. Horn players and other transposing instruments (ones that have to be thought in different keys from the names on the piano or guitar) often like flat keys, because when they play in a simple key like "C", other non-transposing instruments like the guitar or piano have to play in B flat or E flat.

flat names and sharp names

All keys with flat names have flats in their key signature. F is the only key with a flat in its key signature that has a natural name. The two keys with sharp names, F# and C#, have sharps in their key signature. All keys with natural names have sharps in their key signature except C and F (see above).

FIVE STEPS TO MEMORIZING KEY SIGNATURES

(the most important of the twelve in the next section)

1. C major has no sharps nor flats.
2. F major has one flat: Bb.
3. All of the other keys “accumulate” sharps or flats in their key signatures. In key signatures, sharps are written in the order F-C-G-D-A-E-B (Fat Cats Get Down At Ed’s Barbecue), flats in the reverse order: B-E-A-D-G-C-F (Bead Go Catch Fish). These sharps and flats accumulate in order. If a key has one sharp, the sharp is F#. If it has two sharps, they are F# and C#. If a key has one flat, the flat is Bb. If it has two flats, they are Bb and Eb. Sharp keys accumulate sharps from the beginning of F-C-G-D-A-E-B (Fat Cats Get Down At Ed’s Barbecue). Flat keys accumulate flats from the beginning of B-E-A-D-G-C-F (Bead Go Catch Fish). The order for sharps and flats are the opposites of one another.
4. To determine a sharp key, raise the last sharp a half step. When reading the sharps as they appear in the key signature from left to right, raise the last sharp (on the right) in a key signature a half step to produce the name of the key.
5. To determine a flat key, name it after the next to last flat. When reading the flats as they appear in the key signature from left to right, look at the next-to-last flat. It is the literal name of the key.

12 STEPS TO MEMORIZING KEY SIGNATURES

1. Each key signature indicates the notes of a particular major scale.
2. Every major scale uses the same seven letters: A B C D E F G. These seven letters form an alphabetical cycle:

3. Each major scale starts on the letter after which it is named and follows the alphabetical cycle around to the same letter.
4. Each major scale has one or more notes sharpened or flatted except C major, which has no sharps or flats.
5. Each major scale uses each letter (A-B-C-D-E-F-G) once and only once (F and F#, B and Bb are never used in the same major scale). Major scales never combine sharps and flats; they always use one or the other.
6. Memorize the note names on the staves (below). See [Reading Standard Music Notation](#).

7. Memorize the C major key signature and C major scale (see the previous pages).
8. Memorize the F major key signature and F major scale (see the previous pages).
9. There is a series of “sharp” keys which have one or more sharps in their key signature:

- If a key has one sharp (#), the sharp is F#.
- If the key has two sharps, the sharps are F#-C#.
- If the key has three sharps, the sharps are F#-C#-G#.
- If the key has four sharps, the sharps are F#-C#-G#-D#.
- If the key has five sharps, the sharps are F#-C#-G#-D#-A#.
- If the key has six sharps, the sharps are F#-C#-G#-D#-A#-E#.
- If the key has seven sharps, the sharps are F#-C#-G#-D#-A#-E#-B#.

If sharp keys are placed in order with 1 through 7 sharps, they are in order of perfect fifths: F#-C#-G#-D#-A#-E#-B#.

So, sharps accumulate in the order F-C-G-D-A-E-B:

Fat Cats Get Down At Ed's Barbecue

The last sharp in the key signature is always the seventh degree of the scale. The next to the last is the third degree. Third from last is the sixth degree, etc., accumulating the following sequence:

position in key signature	seventh from last sharp	sixth from last sharp	fifth from last sharp	fourth from last sharp	third from last sharp	second from last sharp	last sharp
numbered tone in scale	4	1	5	2	6	3	7

10. Seven major keys with sharps in their key signature are named after the note one fret (1/2 step) higher than the last sharp in the key signature. The last sharp is on the far right in the key signature. The relative minor key is a whole step below the last sharp.

11. There is a series of six flat keys which have two or more flats in their key signatures:
- If a key has two flats, the flats are Bb-Eb.
 - If a key has three flats, the flats are Bb-Eb-Ab.
 - If a key has four flats, the flats are Bb-Eb-Ab-Db.
 - If a key has five flats, the flats are Bb-Eb-Ab-Db-Gb.
 - If a key has six flats, the flats are Bb-Eb-Ab-Db-Gb-Cb.
 - If a key has seven flats, the flats are Bb-Eb-Ab-Db-Gb-Cb-Fb.

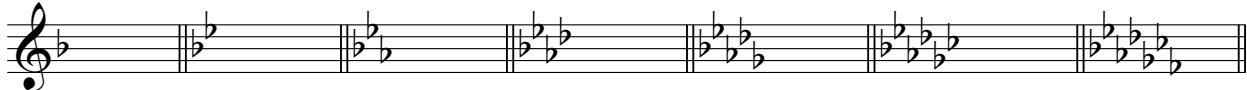

If flat keys are placed in order with 1 through 7 flats in their key signature, they are in order of perfect fourths: Bb-Eb-Ab-Db-Gb-Cb-Fb.

So, flats accumulate in the order B-E-A-D-G-C-F:

Bug Eyes Are Darn Good Cat Fish

12. To name any of the six major keys with two or more flats: the flat next to the far right names the key. As usual, the relative minor key (Aeolian mode) is 1 1/2 steps below the major key.

F/Dm Bb/Gm Eb/Cm Ab/Fm Db/Bbm Gb/Ebm Cb/Abm

The last flat in the key signature is always the fourth degree of the scale. The next to the last flat is the first degree. Third from last is the fifth degree, and so on, accumulating the following sequence:

position in key signature	seventh from last flat	sixth from last flat	fifth from last flat	fourth from last flat	third from last flat	second from last flat	last flat
numbered tone in scale	7	3	6	2	5	1	4

CONCEIVING AND WRITING KEY SIGNATURES

Reading key signatures is one thing. Writing or conceiving them for a particular key is another. In a sense, you have to reverse-construct what you learned about reading them.

Determining Key Signatures

To create a signature for a key that includes flats, recite the accumulative order Bb-Eb-Ab-Db-Gb-Cb-Fb (Bead Go Catch Fish) from the beginning through the name of the key and one more letter name (in the B-E-A-D-G-C-F series, not alphabetical order).

To create a key signature for a key that includes sharps, first determine the last sharp as written in a key signature from left right. The last sharp is the seventh step of the scale and is one fret below the note that is the name of the key. It is one letter alphabetically before the name of the key. Then name the sharps by reciting the accumulative order F#-C#-G#-D#-A#-E#-B# (Fat Cats Get Down At Ed's Barbecue) from the beginning through that letter name that is the seventh step of the scale.

Does the Key Use Flats or Sharps?

C major uses neither: it has no sharps nor flats. Every key with a flat name uses some flats (but no sharps). Every key with a sharp name uses sharps, but no flats. All keys with natural names have one or more sharps, except C (no sharps nor flats) and F (one flat, which is Bb).

Fourths and Fifths As the Origin of Key Signatures

Each flat key uses seven notes in fourths, representing the scale in the order 7-3-6-2-5-1-4. We only show the flats in the key signature, but if there are two or more flats, the key name will be next to the last in the "1" position.

flats/fourths 7-3-6-2-5-1-4 Bead Go Catch Fish

B#-E#-A#-D#-G#-C#-F# B-E-A-D-G-C-F-Bb-Eb-Ab-Db-Gb-Cb-Fb

Each sharp key uses seven notes in fifths, representing the scale in the order 4-1-5-2-6-3-7. We only show the sharps in the key signature, but the last sharp will always be visible in the "7" position. The last sharp can then be raised a half step (one fret) to determine "1", the name of the key.

sharps/fifths 4152637 Fat Cats Get Down At Ed's Barbecue

Fb-Cb-Gb-Db-Ab-Eb-Bb F-C-G-D-A-E-B-F#-C#-G#-D#-A#-E#-B#

Conceive flat keys as an expression of B-E-A-D-G-C-F, each with a certain number of flats in a row, then the rest are natural (i.e. B \flat -E \flat -A-D-G-C-F or B \flat -E \flat -A \flat -D-G-C-F). Conceive sharp keys as an expression of F-C-G-D-A-E-B, each with a certain number of sharps in a row, then the rest are natural (i.e. F \sharp -C-G-D-A-E-B or F \sharp -C \sharp -G-D-A-E-B).

Where Key Signatures Apply in Written Music

Key signatures apply throughout a piece of music except:

1. Where indicated otherwise, in which case the new accidental (\sharp , \flat or \natural) applies throughout the remainder of the measure. The accidental can carry over into the next measure to complete a tied note.

Here is the same example with “courtesy” accidentals, as reminders.

2. Where a new key signature is shown, in which case the new key signature is used except where indicated otherwise.

review the rules

Sharps or naturals accumulate in fourths. If you have one sharp or naturals, it's on scale tone 7. If you have two sharps or naturals, they are on 7 and 3. Three sharps or naturals are on 7-3-6. Four are on 7-3-6-2. Five are on 7-3-6-2-5.

C major has no sharps nor flats, so every letter is natural. C sharp major has every letter sharp, since every letter is raised a half step from C major.

F major has only one flatted note, B flat. F sharp major has every note sharp, except B is natural.

As the keys with one through five sharps (G, D, A, E and B) proceed through their accumulative order of sharps in fifths (F#-C#-G#-D#-A#), their key names proceed in an order of fifths (G-D-A-E-B). The scale tones with a different accidental accumulate in an order of fourths (7-3-6-2-5). The seventh step of the G scale (one half step below G) is F#, so its key signature is just F#.

The seventh step of the D major scale (one half step below D) is C#, so its key signature is F#-C#.

The seventh step of the A major scale (one half step below A) is G#, so its key signature is F#-C#-G#.

The seventh step of the E major scale (one half step below E) is D#, so its key signature is F#-C#-G#-D#.

The seventh step of the B major scale (one half step below B) is A#, so its key signature is F#-C#-G#-D#-A#.

G major has a sharp on step 7 (F#) and the remaining notes (3-6-2-5-1-4) are natural. Gb major has all notes flat (3-6-2-5-1-4), except step 7 is natural (F \natural). Step 7 is the different accidental.

D major has sharps on steps 7 and 3 (C# and F#) and the remaining notes (6-2-5-1-4) are natural. Db major naturals on steps 7 and 3 (F \natural and C \natural) and the remaining notes (6-2-5-1-4) are flat. Steps 7 and 3 are the steps with accidentals different from the remaining notes for these two keys named with the letter D.

A major has sharps on steps 7, 3 and 6 (G#, C# and F#) and the rest (2-5-1-4) are natural. Ab major has naturals on 7, 3 and 6 (F \natural , C \natural and G \natural) and the rest are flat (2, 5, 1, 4). 7, 3, 6 are the steps with accidentals different from the remaining notes for these two keys named with the letter A.

E major has sharps on steps 7, 3, 6, 2 (D#, G#, C# and F#), and naturals on 5-1-4 (B-E-A). Eb major has naturals on 7, 3, 6 and 2 (D \natural -G \natural -C \natural and F \natural) and flats on 5-1-4 (Bb-Eb-Ab). 1, 4 and 5 are the steps with accidentals different from the remaining notes (7-3-6-2) for these two keys named with the letter E.

B major has sharps on steps 7-3-6-2-5 (A#-D#-G#-C#-F#), and naturals on 1-4 (B-E). Bb major has naturals on 7-3-6-2-5 (A-D-G-C-F) and flats on 1 and 4 (Bb and Eb). 1 and 4 are the steps with accidentals different from the remaining notes (7-3-6-2-5) for these two keys named with the letter B.

THE CYCLE OF FIFTHS

The **cycle of fifths** displays the fifteen key signatures in a circle. There are twelve *different* keys, but three of them can be written in two ways. Moving clockwise around the circle adds sharps or deletes flats. Moving counterclockwise around the circle adds flats or deletes sharps.

Courtesy naturals are used in key signatures to remind the reader that certain notes are no longer sharped or flat-
ted. They are written at the left of each line or at the beginning of each page and at each change of key or scale.

"A" major with
"F, C and G" sharps

"B flat" major with
"B and E" flats and a
cautionary reminder that "F,
C and G" are natural.

"E flat" major with
"B, E and A" flats

"D" major with
"F and C" sharps and a
cautionary reminder that
"B, E and A" are natural.

THE RELATIVE MAJOR AND MINOR SYSTEM

In the *relative major and minor* system of keys, there are two possible keys with each major scale. The key may be on steps one or six of a major scale. So, when you initially interpret a key signature for a major scale, naming it after the note on step one, you need to also consider its *relative minor* tone center on step six of the major scale.

The intervals between major scale tones by number in consecutive order are all whole steps (they are two frets apart) *except* scale tones three to four is a half step (one fret) and steps seven to one is a half step. The interval between step one and its relative minor on step six is one and a half steps down (three frets down).

Here are each of the fifteen key names (named after step one for each), showing each key along with its relative minor key after a forward slash: C/Am, F/Dm, Bb/Gm, Eb/Cm, Ab/Fm, Db/Bbm, Gb/Bbm, C/Abm, G/Em, D/Bm, A/F#m, E/C#m, B/G#m, F#/D#m and C#/A#m.

relative major and minor scales and parent scales

Each scale has an alternate major and minor name, called relative major and relative minor. Notice that the flats and sharps do not have to be written before each altered note. A key signature applies throughout a piece of music until another key signature is shown. A Aeolian uses the notes of the C major scale, with the focus on “A”, so the *parent scale* for A Aeolian is C major.

C major scale													A Aeolian mode (scale)

enharmonic keys

Enharmonic keys have notes with the same pitches, but different note names. There are 12 different major scales, but three of them have two possible names.

1. F# and Gb major both have the same pitches, with different names.
2. Cb and B major scales both have the same pitches, with different names
3. C# and Db major scales both have the same pitches, with different names

Q & A ON KEY SIGNATURES

Questions (Q) and Answers (A) :

- Q: What is the key signature for C major? A: no sharps nor flats
- Q: What is the key signature for F major? A: Bb
- Q: What is the order of sharps? A: F-C-G-D-A-E-B
- Q: What is the order of flats? A: B-E-A-D-G-C-F
- Q: If you had two sharps in a key signature, what would they be? A: F# and C#
- Q: If you had two flats in a key signature, what would they be? A: Bb and Eb
- Q: If you had three sharps in a key signature, what would they be? A: F#, C# and G#
- Q: If you had three flats in a key signature, what would they be? A: Bb, Eb and Ab
- Q: If you had four sharps in a key signature, what would they be? A: F#, C#, G# and D#
- Q: If you had four flats in a key signature, what would they be? A: Bb, Eb, Ab and Db
- Q: If you had five sharps in a key signature, what would they be? A: F#, C#, G#, D# and A#
- Q: If you had five flats in a key signature, what would they be? A: Bb, Eb, Ab, Db, Gb
- Q: If you had six sharps in a key signature, what would they be? A: F#, C#, G#, D#, A# and E#
- Q: If you had six flats in a key signature, what would they be? A: Bb, Eb, Ab, Db, Gb, and Cb
- Q: If you had seven sharps in a key signature, what would they be? A: F#, C#, G#, D#, A#, E# and B#
- Q: If you had seven flats in a key signature, what would they be? A: Bb, Eb, Ab, Db, Gb, Cb and Fb
- Q: What is a natural letter name? A: One that has no flat or sharp
- Q: If a key has a sharp letter name, does it have sharps or flats in its key signature? A: Sharps.
- Q: If a key has a flat letter name, does it have sharps or flats in its key signature? A: Flats.
- Q: If a key signature uses flats, is its name a letter with a flat, sharp or natural? A: With a flat or it is the key of F major (which has Bb in its key signature).
- Q: If a key signature uses sharps, is its name a letter with a flat, sharp or natural? A: With a natural, except F# major (F-C-G-D-A-E, all sharped), C# major (F-C-G-D-A-E-B, all sharped).
- Q: How do you name a key which has sharps in its key signature. A: Raise the last sharp a half step and make sure the letter has increased by one alphabetically as well.
- Q: How do you name a key which has flats in its key signature. A: It is the literal name of the next-to-last flat.

TRANSPOSING OPEN PENTATONIC FINGERINGS TO MOVABLE FINGERINGS

In this section, you will play each common open position pentatonic scale fingering, then a two versions of it each moved up a number of frets. Each time a fingering is moved, the new version will move all notes in the fingering up the same number of frets. This concept will be shown graphically at the bottom of each page. Moving the fingerings up in this manner transposes them to a new key, much like a capo. We are fortunate that transposing can be so easy on the guitar. Each of the pentatonic scales can be elaborated to a major scale or Aeolian mode.

FAVORED PENTATONIC FINGERING

Favored pentatonic are the three fingerings that players use most of the time. As you can see in the previous section, [Transposing Open Pentatonic Fingerings to Movable Fingerings](#), the G/Em, C/Am and F/Dm open pentatonic scales can be considered the origin of the favored movable fingerings shown here. There are five common fingerings for the pentatonic scale, but two of them (fingerings 3 and 5) have challenging fingering when playing fast or complex phrases. The favored pentatonic fingerings are 1, 2 and 4.

Minor pentatonic can be used throughout a major key blues. Blues can use minor pentatonic with natural three or major pentatonic on major sounds. In blues, major pentatonic should generously use the flat three option and the minor pentatonic should not use too much natural three. The IV chord should use flat three of the key, not flat three.

The Favored Pentatonic Table

diagram legend: chord = black, arpeggio = black and grey, pentatonic scale = all numbers

“Both, Minor, Major, Minor, Major”

As you ascend the [octave shapes](#) in the order EDCAG, using *only* favored pentatonic fingerings 1, 2 and 4, the summary of the available major or minor pentatonic scales is both in E form, minor in D form, major in C form, minor in A form and major in G form. This can be summarized as “both, minor, major, minor, major”. Note that each fingering repeats in pairs of major and minor, such as fingering 2 for G major in II position and fingering 2 for G minor in V position.

In B.B. King’s style, he plays blues in major keys with both major and minor pentatonic. Eric Clapton adopted this practice for his blues. Neil Schon is said to have admired Eric Clapton and adopted this practice second hand from Eric. Angus Young and Leslie West seem to also play in the B.B./Clapton mold and combine major and minor pentatonic.

Albert King used exclusively minor pentatonic. If you were using this strategy to play as he did only in minor (or were playing in a minor key where you must use minor), you could visualize the “both, minor, major, minor, major” sequence and choose only the minor pentatonic.

Country music, some pop and some southern rock often uses exclusively major pentatonic. As with the minor pentatonic strategy, you could visualize the “both, minor, major, minor, major” sequence but choose only the major pentatonic.

This may be placed at any fret. Chord tones are black, pentatonic scale are black and grey.

Locate Pentatonic Scales by Chords on the Smallest Three Strings

be able to quickly locate these fingerings and play licks

Develop the ability to quickly locate either a minor or major pentatonic scale fingering in a given key *and* immediately play licks with it. You can build a repertoire of licks for minor pentatonic with [Minor Pentatonic Blues Rock Cells](#) and for major pentatonic with [Major Pentatonic Swing Blues Cells](#).

three fingerings

Historically, blues, rock and blues rock guitar uses pentatonic scales in single note solos, not seven note scales based on the major scale. Favoring the fingerings with easier access to the important chord tones, three of the five pentatonic fingerings stand out. You can view the five fingerings on the following pages.

Fingering 1 is overwhelmingly used most, around half the time. For the most part, fingerings 2 and 4 are used the remainder of the time with only occasional use of fingerings 3 and 5. This doesn't mean you shouldn't explore fingerings 3 and 5, just explore 1, 2 and 4 first. When you get to exploring more options on how to slur notes and other melodic devices (other than blues licks) such as double stops, you'll then find more of a need for pentatonic fingerings 3 and 5.

three strings

Blues licks tend to be played on the smaller strings. We'll be looking at the three smallest strings (one, two and three). The fourth string is used often as well, arguably as much as the first string (though I don't think so). By looking at the three commonly used pentatonic fingerings 1, 2 and 4 mentioned above and looking at them on the first three strings, the chord tones on which the themes and licks are based are easy to visualize and memorize.

three triads

I'm orienting these pentatonic fingerings to three major triads (three-note chords), each fingered on the smallest three strings (one, two and three). These are shown in the top row of diagrams below. Each triad uses part of the cycle of chord tones 1-3-5-1-3-5, etc. In the bottom row of diagrams below, minor versions of each of the three major triads are shown. They each have been made minor by moving the note numbered "3" one fret lower in pitch, one fret toward the head of the guitar.

Note that for each pair of triads below, the minor triad shown below the major triad has its third lowered by a half step, moved one fret toward the head of the guitar.

major triads

minor triads
with flat three

Locate Favored Pentatonic Scales and Barre Chords

On the sixth and fifth strings, memorize open and twelfth fret "E" and "A", then "A-B-C-D-E-F" at the fifth position, then the tenth fret notes D and G, each one letter lower than the letter name for the twelfth fret.

A Specific Minor Pentatonic Fingering for Each Minor Chord

For each of the three minor chords shown above, there is a specific minor pentatonic scale fingering which has the chord as the part of it after which it is named. Each G minor chord is part of a G minor pentatonic scale.

	Gm III	Gm VI	Gm X
	G minor pentatonic scale fingering 1	G minor pentatonic scale fingering 2	G minor pentatonic scale fingering 4

scale numbers note 1, b3, 5 on the first three strings			
finger numbers			

A Specific Major Pentatonic Fingering for Each Major Chord

For each of the three major chords shown in the [Three Triads](#) section above, there is a specific major pentatonic scale fingering which has the chord as the part of it after which it is named. Each G major chord is part of a G major pentatonic scale.

The major chord with its root on the third string needs to be conceived on the second third and fourth strings, to have it be part of one of the three preferred major pentatonic fingerings, fingering 1.

The major chord at the far right with its circled root on the third string needs to be conceived on the second third and fourth strings, to have it be part of one of the three preferred major pentatonic fingerings, fingering 1.

WIDE-RANGE PENTATONIC SCALES

Guitarists with wider spans would usually prefer the fingerings on the third string that use the second (middle or “2”) finger, such as “1-2-2 on 3” (indicating the ascending notes on the third string are fingered respectively with the index, middle and middle fingers).

PENTATONIC SCALE NAMING CONVENTIONS

Chord-Style Pentatonic Scale Names

In the 1960's, when I started teaching, there was not a common agreement on the naming of pentatonic scales. "Jazz minor pentatonic", the "blues scale" and other terms were each used to define different pentatonic scales. So I started using the established chord naming system (see [Chord-Naming Conventions](#) and [All Scale-Tone Chords](#)) to clarify.

Here are examples of chord style pentatonic scale names: major 6/9 pentatonic, minor 6/9 pentatonic, minor 7/11 pentatonic, 7/11 pentatonic (dominant 7/11 pentatonic), minor 7/11b5 pentatonic. See the chapter [Pentatonic Fingering/7 Pentatonic Scale Types by Octave Shape](#).

Chord-style names may not yet be known to a beginner or intermediate player, so I usually start by referring to the more universal major pentatonic (1-2-3-5-6) and minor pentatonic (1-b3-4-5-b7). Afterward, I show how to modify those scales.

Building the Pentatonic Scale Name

begin with a letter name or roman numeral

The scale name may begin with a letter or roman numeral. The letter shows the tone center for the scale, after which it is named. You should find the tone center in the lowest octave in the area you want to play (on the sixth, fifth or fourth strings) and identify the octave shape in which it occurs.

When the first part of a chord style pentatonic scale is a roman numeral, it refers to the numbered tones of a major scale named after the current key.

Immediately after the Roman numeral the triad basis of the pentatonic scale will be shown. This occurs before any Arabic numbers (1, 2, 3, etc).

"ma" means the scale is based on major, with 1, 3 and 5

nothing (such as nothing between IV and 7 in "IV7/11") means major

"m" means the scale is based on minor, with 1, b3 and 5

follow the letter name or roman numeral with a number

Numbers in pentatonic scale names commonly include “6”, “7”, “9” and “11”.

“6” means six

“7” means flat seven, unless “major” * (“ma”) occurs before it, which means natural 7

“9” is “2”

“11” is “4”.

For any number above “7”, subtract 7. So, 9 is 2, 10 is 3, 11 is 4, 12 is 5, 13 is 6.

numbers may have alterations

“b5” replaces five with flat five

“#11” means sharp four, and adds that to the scale (C7/#11 is C E F# G Bb).

“ma7” means natural seven (as stated above)

three implications of the number seven

In standard chord naming, “7” means flat seven. The two exceptions are (1) when it says ma7, maj7, major 7, Δ7 or 7 (avoid: this is sometimes used to “distinguish” 7 from other numbers) and (2) diminished seventh, which is double-flat seven (or “6”).

ambiguous use of the term “major”

In “ma6” (major sixth), “ma” refers to a major triad with an added sixth. It is assumed that the sixth is major, since a b6 is not used (unless to imply the use of a fifth and sharp fifth, by calling the sharp fifth a “b13”). and ma7 refers to a major chord with major 7. Confusingly, “major” refers to major 7 when before 7.

SEVEN PENTATONIC SCALE TYPES

Learn These Six Pairs First

Triad tones are black, the addition pentatonic tones are grey. With minor pentatonic & 3, the arrows illustrate that “b3” should precede three. Using flat three with major pentatonic gives the scale a minor sound, but a different minor sound compared to minor pentatonic. Using natural three with minor pentatonic gives it a different major sound compared to major pentatonic.

Seven Pentatonic Scale Types by Fingering Number

The black-backed tones below are triad tones. 1-b3-5 is a major triad and 1-3-5 is a major triad. The remaining gray tones are pentatonic scale tones not in the triad. The 7/11 (dominant 7/11) pentatonic scale has an optional “b3”. The flat three precedes the natural “3”, whether ascending or descending. “b3” is often slurred (by a bend, hammer-on or slide) to “3”.

III

The musical score is for the song 'The Rose Tree'. It features a treble clef and a 3/4 time signature. The melody is written on a single staff. The key signature has one flat (B-flat). The melody starts with a repeat sign, followed by a series of eighth and quarter notes. The melody ends with a repeat sign. To the left of the staff is a guitar chord diagram for a G major triad (G-B-D) in the first position, with the root G on the first fret of the first string, B on the second fret of the second string, and D on the first fret of the third string. The diagram is labeled with Roman numerals III, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100.

G Minor 7/11 Pentatonic Scale Fingering 5 With One Chromatic (#4/b5)

Gm7/11 XII

The third section shows a fingerboard diagram for Gm7/11 XII and a musical staff with a pentatonic scale in G minor. The scale is G, Bb, D, F, Ab, B, with a chromatic alteration (#4/b5) between F and Ab. The bass staff shows the fret numbers for the pentatonic scale: 15, 13, 15, 11, 12, 15, 12, 11, 13, 14, 15, 13, 15, 13, 15, 14, 13, 11, 12, 15, 12, 11, 15, 13.

Bb Major 6/9 Pentatonic Scale Fingering 5 With One Chromatic (#2/b3)

Bb6/9 XII

The musical score for 'The Rose Tree' is presented in two systems. The first system features a treble clef, a key signature of one flat (B-flat), and a 4/4 time signature. The melody is written on a single staff and includes a repeat sign at the beginning and end. The melody consists of eighth and quarter notes, with triplets indicated by a '3' below the notes. The second system shows the vocal parts for Tenor (T), Alto (A), and Bass (B). Each part has its own staff with a 4/4 time signature. The lyrics are written below the staves, corresponding to the notes. The Tenor part starts with a repeat sign and ends with a double bar line. The Alto and Bass parts follow the same structure, with the Bass part ending with a double bar line and a final note on '13'.

The image displays a musical score for the song "The Rose Tree". It consists of two staves. The top staff is a single melodic line in G major, 2/4 time, starting with a repeat sign and ending with a final cadence. The bottom staff is a three-part vocal harmony for Tenor (T), Alto (A), and Bass (B). The Tenor part begins with a repeat sign and ends with a final cadence. The Alto and Bass parts follow the Tenor part, with the Bass part starting on a lower line and the Alto part starting on a middle line. The lyrics "The Rose Tree" are written below the vocal parts.

INTRODUCTION TO CHROMATICS

The Latin root word “chrom” means color. We supplement the tone color of scales and arpeggios by adding coloring tones called *chromatics*.

Targeting Chord and Pentatonic Tones

One or more consecutive chromatics can ascend to a chord tone to target the chord tone. When more than two ascending chromatics are used in this manner, they should be associated with the setup or target chord by putting chord tones on the beat (metric accent) or emphasized by some other means. See [Chromaticized Arpeggios](#). The simplest of these ascending chromatics is a single one, called a *lower chromatic embellishment*.

LCE = lower chromatic embellishment. Root, third, fifth and sixth are chord tones. [click to play](#)

♩ = 135

Swing Eighths

C¹³

LCE third root LCE fifth third LCE sixth

4 5 5 7 8 5 4 5 8 6 5

Upper chromatic embellishment is rare. It can be used on a diminished seventh arpeggio, in approaching each tone from a half step above, making a half/whole diminished scale

UCE = upper chromatic embellishment. CT are chord tones. [click to play](#)

♩ = 125

Swing Eighths

UCE CT UCE CT UCE CT UCE CT UCE CT

9 8 6 5 6 5 8 7 5 8 9 8 6 5 8 5 7 5 5 7 7

One or more passing chromatics can be inserted between one chord tone and another or between one scale tone and another. When a scale tone is also a chord tone, consider it a chord tone, since the chord tone is more important.

LOWER CHROMATIC EMBELLISHMENT

A lower chromatic embellishment is a tone that precedes a chord tone from a half step below, immediately before the chord tone. From about 1900 to 1920, in early blues and ragtime music, lower chromatic embellishments were played with long duration, typically a half or a third of a beat (an eighth note or an eighth note triplet note in 4/4 time). I'll call that a *ragtime lower chromatic embellishment*. By about 1940, it became fashionable to play the lower chromatic as a grace note (very short duration). I'll call the grace note type a *modern lower chromatic embellishment*.

PASSING CHROMATICS

Passing chromatics fill in-between the notes of pentatonic scales. Most commonly between whole steps. The most common whole step passing chromatic is in minor pentatonic between flat seven and one and in major pentatonic between two and three.

BLUE NOTES AND MICROTONAL BENDS

Half Step Release, Down a Whole Step

Releasing (bend) half step followed by a note down a whole step . Grace note or pre-bend a half step and release as an eighth note to a note down a whole step. The third note should be a chord tone. Use on b3-2-1, b5-4-b3 or b7-6-5 of the current chord. The example below is common in country music.

Chicken Pickin'

At the beginning of the James Burton/Scotty Moore example, there is a gradual release on the third string. “Chicken pickin’” is employed on the repetitions of the note on the third string, using thumb next to the pick to mute the downstrokes and the pick on the upstrokes (upstrokes *on* the beat) while picking the pre-bent “A” bent to “B” and gradually releasing the bend. Use the middle fingernail to pick the stationary flat seven on the second string. The slur from flat three to three near the end of the James Burton portion (labeled “b3” and “3”) are a ragtime lower chromatic embellishment.

darkening natural thirds with grace note flat thirds

The James Burton/Scotty Moore example below (below “Chicken Pickin’”), ends with a modified version of Scotty’s figure, adding a grace note lower chromatic flat third before the natural third. The grace note flat third that darkens the mood. This is common in blues-related styles, like rockabilly.

basic James Burton “chicken pickin” example

This example illustrates what is discussed in the two sub-sections above, “chicken pickin”.

Swing Eighths

♩ = 135

James Burton Scotty Moore

gradually release from a whole step bend to full release
(not incrementally, use a continuous release)

full full full full full full 1/2 1/2 1/2

TAB

On each down-stroke, the picking hand thumb mutes the third string as the note is picked. On each up-stroke, the note is picked normally. Additionally, with each up-stroke the picking hand middle finger nail plucks the note on the second string (except on the last note in bar two, where there isn't a note on the second string).

microtonal bends

A microtonal bend is an expressive bend that raises the pitch a quarter tone, which is half of a half step (half a fret). Microtonal bends can be applied to flat three, flat five, flat seven and (rarely) flat nine tones.

microtonal bends example - [click to play](#)

$\text{♩} = 90$

The musical notation shows a sequence of notes with microtonal bends. The top staff is in 4/4 time with a tempo of 90 bpm. The bottom staff shows the corresponding fretboard positions for the notes, with fingerings (1-5) and bends (1/4) marked.

The little curved line that looks like a Nike logo is the microtonal bend symbol.

Flat three (b3) and flat seven (b7) microtonal bends are common.

Flat five (b5) microtonal bends are less common.

Flat nine (b9) microtonal bends are very rare.

SYNTHETIC PENTATONIC SCALES

Additional pentatonic scales can be created, using the categories shown earlier in [Seven Pentatonic Scale Types](#). The categories were 7/11, 6/11 and 6/9. These new scales you create can be called *synthetic pentatonic scales*, since they are not in common use.

Naming Pentatonic Scales with Chord Names

By using the existing system of chord names as shown in “[Chord Naming Conventions](#)”, any pentatonic scale can be named.

Archetypal Chords

The chapter “[Chord Archetypes](#)” defines all common chord types you’ll need to create more pentatonic scales. Also see “[Chord Naming Conventions](#)”.

Adding a Tone to a Seventh or Sixth Arpeggio

Add 2, b2, 4, b4, #4, b6 or 6 to a seventh chord. Add 2, b2, 4, b4, #4, b7 or 7 to a sixth chord. Omit redundant versions such as not adding “#4” to a chord with “b5”.

Creating More Seven Add Four Type Pentatonic Scales

“11” is the same tone as “4”. Add a four or sharp four to any seventh chord arpeggio and create a pentatonic scale.

Creating More Six Add Two Type Pentatonic Scales

Add a two or flat two and add a six or flat six to any triad and create a pentatonic scale.

Creating More Six Add Four Type Pentatonic Scales

Add a six or flat six and add a six or flat six to any triad and create a pentatonic scale.

Re-Naming Ninth Arpeggios as Pentatonic Scales

By playing the ninth of a ninth arpeggio down an octave, it becomes a pentatonic scale. “9” becomes “2”, “b9” becomes “b2” and “#9” becomes “#2”.

Library of Common and Synthetic Pentatonic Scale Fingerings

Use the circled notes as locators for the key on the largest string available in the fingering. C minor pentatonic fingering 1 would be placed where the circled note on the sixth string is on the sixth string, eighth fret.

MELODIC RHYTHM

Beats per Bar and Tempo

beats per bar

Music is usually based on a regular pulse, likened to a heartbeat or to footsteps. This started in Greece, when one of the cast members in Greek plays would stomp his foot with a bell anklet to establish the regular pulse or beat to guide the cast members in speaking their words with a regular pulse. We commonly group beats into bars of four, three, six or twelve beats.

tempo

The rate of beats is measured in beats per minute. In the example below (Beats Grouped into Bars), quarter notes (one beat each in 4/4, 3/4; two beats each in 6/8 or 12/8) are played at the rate of 100 beats per minute, shown at the upper left with the indication “♩ = 100”.

Dividing the Beat

Beats are divided into two, three, four, six or eight parts. Usually those parts are equal. Triplets divide the beat into thirds of a beat each note, sixteenth notes divide the beat into quarter beat notes, etc.

Beats Grouped into Bars - [click to play video](#)

Three-Pulse Rhythms

Triplets

Triplets divide the beat into three equal parts, as shown previously in “[Dividing the Beat](#)”.

swing eighths

There is a common practice of dividing the beat into unequal halves, with the first part of the beat approximately two thirds of the beat and the second part around one third of the beat. This division can vary anywhere from 51% and 49% for the two parts of the beat to 75% and 25% of the beat.

The “swing eighths” below are first “written out” in triplets and then shown as eighth notes with the interpretation “swing eighths”, which means the same thing: play the first and third note in the triplet.

Triplet (three notes on each beat)

Swing Eighth (first and third of each triplet)

Afro-Cuban and waltz

The “Afro-Cuban” selects the first two parts of a triplet. Triplets can be counted “one trip let”, “two trip let” and so on. The “Afro-Cuban” could be represented by speaking “one trip um”, “two trip um”, etc., to represent the un-played third part of the triplet with “um”.

The waltz selects the last two parts of the beat. In order to still note the numbered beats, you might could the waltz by speaking the number softly, then “trip let” loudly for each beat. The soft number could indicate the un-played note at the beginning of each triplet for the “waltz”. The formal meaning of waltz is a European dance song form in 3/4. I’m using the term loosely to describe the subdivision that select the last two parts of a beat. It is typical in a waltz that a bass note plays on the first of three beats in a measure and a chord plays on the last two parts.

PARENT SCALES AND MODES

A single major scale can be the parent of seven scales, one built on each of its steps. It can also contain pentatonic scales on each of its scale tones and arpeggios on each of its scale tones. See [Key Scales, Parent Scales & Chord Scales/Scale Synonyms \(Modes\)](#) and [Parent Scales, Scale-Tone Arpeggios & Pentatonics](#).

RELATIVE MAJOR AND MINOR PENTATONIC

Each pentatonic scale can be used with a major tone center or a minor tone center. The minor tone center is in a key three frets (a minor third) below the major tone center. See [Pentatonic Fingering](#). Here is that relationship for all keys:

major key	A	Bb	B	C	C#	Db	D	Eb	E	F	F#	Gb	G
minor key	F#m	Gm	G#m	Am	A#m	Bbm	Bm	Cm	C#m	Dm	D#m	Ebm	Em

REFERENCE MAJOR SCALE FINGERING

Seven In-Position Fingerings, Numbered By Scale Tones

Major scale fingerings are numbered in this course according to the number of lowest note fingered with the index finger on the sixth string. The seven *in-position* fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the an alternate string. Head-reach (index) options are generally preferred for scale and melody, while body-reach (pinky) options are preferred for arpeggios.

fingering 1 3 index reaches	fingering 2 2 pinky reaches	fingering 3 no reaches	fingering 4 2 index reaches	fingering 5 4 index reaches	fingering 6 1 pinky reach	fingering 7 no reaches

In-Position Major Scale Fingerings by Finger Number

“1” is the index finger, “2” is the middle finger, “3” is the ring finger and “4” is the little finger. Head-reach (index) options are generally preferred for scale and melody, while body-reach (pinky) options are preferred for arpeggios.

fingering 1 3 index reaches	fingering 2 2 pinky reaches	fingering 3 no reaches	fingering 4 2 index reaches	fingering 5 4 index reaches	fingering 6 1 pinky reach	fingering 7 no reaches

The in-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall.

Other fingerings called *three-note-per-string major scale fingerings* use slightly different rules regarding playing in position.

Three-Note-Per-String Fingerings, numbered by fingers

fingering 7/1

fingering 1/2

fingering 4/5

fingering 5/6

fingering 6/7

Twelve In-Position Fingerings, Numbered by Scale Tones and by Formula

In this naming system, the first number indicates the string where the lowest-octave tone center is located. The second number indicates the fretting hand finger that frets the tone center. 1 = index, 2 = middle, 3 = ring and 4 = little finger. "L" is shown after the number "1" when the index finger reaches one fret toward the head of the guitar for the low-octave tone center ("L" to indicate low pitch). A note in parenthesis indicates an optional location to fret a note on an adjacent string.

VISUALIZING ARPEGGIOS ON TOP OF SCALES

Build a Strong Memory of Arpeggios and Scales

As you build a good memory of arpeggios and scales, you can use the next five sections (each of the five pentatonic tones against chords) to verify, rather than using rote memorization for those sections. For more in-depth study, see [Emotive Qualities of Chords and Scales](#).

Duality Tones

Duality tones are notes that are in both the current scale and the current chord. See [Core Melody Built with Duality Tones/Duality Tones and Core Melody](#) and [Chord Tones in Pentatonic Scales](#).

Parent Scales

Read the section Parent Scales and Modes. On each of the following pages, titled “X (G, E, D, C or A) Form Parent Scale with Pentatonic Scales and Duality Chords)Triads or Sevenths)” each show a main reference scale in a box. On each page, this is the parent scale for the page.

Reading Diagrams on the Parent Scale Pages

The following pages, titled “X (G, E, D, C or A) Form Parent Scale with Pentatonic Scales and Duality Chords)Triads or Sevenths)” have rows and columns of diagrams, showing commonality of the scales and arpeggios, as described below

thinking graphically in key scale

The basic premise is that you should primarily build your melody with key scale pentatonic and occasionally feature arpeggio tones of the current chord (shown by gray circles). To do this effectively, memorize all the arpeggios in [Arpeggio Fingering](#), and the scales in [Relative Major and Minor Pentatonic](#).

Use one of the parent scales, such as “[G Form Parent Scale with Pentatonic Scales and Duality Triads](#)”. The boxed diagram on the upper left of the page is the parent major scale for the entire page. Notes on that diagram are numbered in relation to that parent major scale, with “1” on the note that names the parent scale’s key.

modes with pentatonic key scales

Each of the rows labeled major, Dorian, Mixolydian, Aeolian show a mode of the parent major scale. In each row, the numbered tones are a pentatonic scale named after the featured tone for that row. Only the numbered tones are pentatonic tones. Notes *without* a number shown with a gray circle are chord

tones *not* in the pentatonic scale. The numbered tones in the “I major” row are I major pentatonic. The numbered tones in the “II Dorian” row are II minor pentatonic. The number tones in the “V Mixolydian” row are V major pentatonic. The numbered tones in the “VI Aeolian” row are VI minor pentatonic.

Notice that the numbered tones in each row are identical. The key scale for VI Aeolian should have “1” on the tone center of the desired Aeolian key. For A Aeolian, that “1” should be on “A”. In the parent major scale, that “A” would be on “6”

arpeggio tones are shown with gray circles

Chord tones played one note at a time are arpeggio tones. The gray circled notes are arpeggio tones. If a gray circled note *also* has a number, it is a *duality* tone, a note both in the scale and the arpeggio. See [Core Melody Built with Duality Tones/Duality Tones and Core Melody](#) and [Chord Tones in Pentatonic Scales](#).

If a chord tone is not in the scale, it should be used less frequently and with less emphasis, since the scale tones should be featured to preserve the sound of the key.

Notice that in each column, for the I major, II Dorian, V Mixolydian and VI Aeolian rows, the grey arpeggio tones showing the featured arpeggio numbered at top of the column are the same.

PROGRESSIVE IMPROV STUDIES

Specific and General Examples Below

Building ninth arpeggios is last in each of the studies and is much the same for any example. So, Building Ninth Arpeggios is shown first below, followed by specific and general examples in minor and major keys.

Building Ninth Arpeggios

Each of these studies end with “building ninth arpeggios”. The standard process in two versions is shown below.

build any ninth arpeggio from a parent major scale

Build any ninth arpeggio by recalling the formula, play the in-position reference major scale with any necessary altered tones from “1” to “9” (high 1 is 8, high 2 is 9). Once you have reached the ninth (“2”), come down to 8 and count it as “1” as you ascend the higher octave. In some of the fingerings, you may to add one to three notes in the bass on the sixth string to include “1” so you can hear the mode it its entirety.

Play in swing eighths with the odd numbered tones louder, then go back and play only the on-beat emphasized 1-3-5-7-9 tones (with any necessary alterations). $ma9=1-3-5-7-9$, $9=1-3-5-b7-9$, $m9=1-b3-5-b7-9$, $m9b5=1-b3-b5-b7-9$, $7b9=1-3-5-b7-b9$, $m9(ma7)=1-b3-5-7-9$. See [Reference Major Scale Fingering](#).

When you modify a major scale with #4, b7, b7-b3, b7-b3-b6, or b7-b3-b6-b2 each result will be another of the seven reference major scale fingerings. See [Mode Cycles](#). Also see [Modal Chord Scales of Four Seven-Tone Scales](#).

build any ninth arpeggio from a known mode fingering

If you know the mode fingering for the scale-tone ninth arpeggio you want to build, ascend from the tone center “1” to “9” (high 1 is 8, high 2 is 9) with any necessary altered tones (such as flat seven or flat three). Once you have reached the ninth (“2”), come down to 8 and count it as “1” as you ascend the higher octave. In some of the fingerings, you may to add one to three notes in the bass on the sixth string to include “1” so you can hear the mode it its entirety.

Play in swing eighths with the odd numbered tones louder, then go back and play only the on-beat emphasized 1-3-5-7-9 tones (with any necessary alterations). $ma9=1-3-5-7-9$, $9=1-3-5-b7-9$, $m9=1-b3-5-b7-9$, $m9b5=1-b3-b5-b7-9$, $7b9=1-3-5-b7-b9$, $m9(ma7)=1-b3-5-7-9$. See [Reference Major Scale Fingering](#).

General Progressive Improv Study

If you don't already have [iReal Pro](#), buy it for Mac, iOS or Android. Play with Ain't No Sunshine in the [All Favored playlist](#) (for iOS, download ALL FAVORED.html for iReal.)

1. First play only triad tones named after the key

See [Relative Major and Minor Pentatonic](#), earlier in this chapter. Choose fingering 1, 4 or 2 to begin with easier fingerings. Play the key minor pentatonic scale through all of the progression that it seems to work.

2. Rhythmic Selection

Learn to be aware of the metronomic beat while playing a rhythm.

Four-pulse rhythms

In eighth notes, there are four pulses every two beats. In sixteenth notes, there are four pulses every beat. Learn to be aware of the metronomic beat while playing a rhythm.

Using [All Possible Four-Pulse Rhythmic Words](#) (see the second page), play each four pulse rhythmic word repeatedly, while selecting from a continuous down-up-down-up strumming motion to represent 1-2-3-4) by always think all four numbers (1-2-3-4) and clearly accent the chosen numbers by pressing down and fretting a chord. On unaccented strokes, mute the strings. Practice these in this progressive order, looping each one: 1-2-3-4, 1-2-3, 1, 1-3, 1-2, 1-3-4, 1-2-4, 2-3-4, 3-4, 2-4, 2, 3, 4, 2-3, 1-4. All the 1's and 3's should be down and the 2's and 4's up.

Three-pulse rhythms

Using [All Possible Three-Pulse Rhythmic Words](#), speak each of the seven three-pulse rhythmic words. In eighth notes, there are commonly three pulses per beat, less often six per beat. Six notes per beat are thought of as three pairs of two pulses or as one pair of three pulses.

3. Transition to an Auditory Concept of Rhythms

- When you consider it safe, stop speaking the numbers and just think them. Try playing the rhythmic word on a repeated part of an arpeggio or scale.
- Play pairs of rhythmic words, looping each pair.
- Once you start hearing the rhythm auditorily, alternate your chosen pair of rhythmic words by rhythmic selection (as described above), then with "ba" on the accented notes. Be able to do this as fast or slow as you can speak.
- Try playing the rhythmic word pair on a repeated part of an arpeggio or a scale.

- Use a metronome to sense bars of rhythm and gradually learn to tap your foot on the beat.

4. Diversify the rhythm

Practice phrases in eighth notes, phrases in sixteenth notes and phrases in eighth note triplets. Be aware that the iReal track is in swing sixteenths, so swing the sixteenths and when you play in eighth triplets make their rhythm metronomically very accurate so the listener can hear them against the very different swing sixteenths.

5. Alternate two-bar phrases of the key pentatonic and the key triad arpeggio

6. Phrase start points

Phrase start points are considered in relation to beat one of the first bar in the phrase. They can start before, on or after the first beat of the first bar. It's generally good to use some repetition and to have a change in the last phrase start point, to signify the end of the section.

Practice playing two-bar phrases with patterning of phrase start points, such as before-before-before-on. Be sure to leave a breath at the end of each two-bar phrase. Begin by playing only key triad tones. See [Triads and Pentatonic Scales](#).

7. chord tones of a secondary chord in the key pentatonic

To establish a harmonic relationship with secondary chords, those chords other than the key chord. Learn how versions of the secondary chord can include most or all of the notes of the key triad.

8. use theme and variation for secondary chords

Groups of consecutive chords can be treated as a single chord by considering alternate versions of chords that provide notes common to all of the chords. See [Commonality Chords](#) and [Substitution/Shared Thirds: Secondary Roots](#).

Transpose. Play a theme in the key chord. Think of it by number, such as 1-b3-5-4-5. During other chords, play the same relative numbers generically in the key of the chord root, using the same numbers, but modifying flats or sharps to find the secondary chord. For example, the key chord might be Cm7 in C Dorian with scale tones 1-2-b3-4-5-6-b7. If you create a theme on the key chord and then want to use it on an F7 chord, the chord scale for the F7 would be F Mixolydian with scale tones 1-2-3-4-5-6-b7 in F. So, if a theme on the Cm7 used b3-4-5-b7 of C, use the theme on F7 in the key of F with 3-4-5-b7, with natural three.

Or **modify and adapt as necessary.** Continuing the example above, if you use the theme b3-4-5-b7 of C on the Cm7, you could play it in C for the F chord. Since F9 is 4-6-1-b3 of C, your b3-4-5-b7 theme used for Cm7 could change to b3-4-5-6 for the F7, changing b7 to 6, since "6" is in the F9 chord.

9. summary of phrasing, rhythm theme and variation

- Select from continuous down-up motion, down on the beat, with frequent ups. On the other hand, all ups is monotonous too.
- ✦ Use a theme-and-variation variety of rhythmic words. Use (1) pairs of rhythmic words. See “All 3 & 4-Pulse Rhythmic Word Pairs”. (2) repeat a melodic cell (short theme) with “anti-metric” repetition where each instance starts on a different part of the beat. For example: a three-eighth note group repeated in 4/4 so it starts on the beat, then off, (3) repeat a short melodic cell a few times and add to it each time.
- ✦ Use theme and variation by pitch: (1) repeat a melodic cell or an entire phrase with a change or series of changes to a note or two, (2) duplicate the theme in another part of the scale or in another key by interval shape or number..
- ✦ Play in two-bar phrases with a breath at the end of each phrase.
- ✦ Pattern the phrase start points: start phrases on, before or after the first beat of every two bars with patterns like “before-before-before-on”. Signify the end of the section by playing a different start point on the last phrase.
- ✦ Assign “signature” notes to each chord, like key 5 and b7 on the I7 chord or key 6 and b3 on the IV7 chord. Emphasize root triad of the I7 chord, key 4-6-1-b3-5 (whichever are available) on the IV7 chord, key 5-b7-2-4 on the 5 chord.
- ✦ **SUMMARY**
 - ✦ syncopation
 - ✦ pairs of rhythmic words
 - ✦ use the “chord/beat relationship strategy to put chord tones on the beat (see [Relating Chord Tones to the Beat](#))
 - ✦ anti-metric repetition
 - ✦ additive repetition
 - ✦ repeat a theme with note change
 - ✦ duplicate a theme in other ranges of the scale or other keys
 - ✦ pattern phrase start points
 - ✦ signature notes for each chord.

10. Learn to build ninth arpeggios for all of the chords

See [Building Ninth Arpeggios](#) at the beginning of this section.

Some chords like minor chords with a flat nine, like the Phrygian m7b9 (IIIIm7b9) and

Locrian m7b5b9 (VIIIm7b5b9) are not currently accepted as chords. You won't find them in any of the forty or so fake books in circulation. They can be used melodically, however, as long as the flat nine is not sustained, but used as a neighboring tone or passing tone.

Ain't No Sunshine Improv Study in Am

If you don't already have [iReal Pro](#), buy it for Mac, iOS or Android. Play with Ain't No Sunshine in the [All Favored playlist](#) (for iOS, download ALL FAVORED.html for iReal.)

1. through 4.

Perform steps 1 through 4 in [General Progressive Improv Study](#), above.

5. Alternate two-bar phrases of Am pentatonic and Am arpeggio

Tend to play chord tones of Am on the beat (especially beat 1) in the bars 1-4 and 7-8 of Ain't No Sunshine. When using the Am pentatonic scale, emphasize Am chord tones within it. For strategies of emphasis, see [Establishing a Key](#).

6. Phrase start points

Phrase start points are considered in relation to beat one of the first bar in the phrase. They can start before, on or after the first beat of the first bar. It's generally good to use some repetition and to have a change in the last phrase start point, to signify the end of the section.

Practice playing two-bar phrases with patterning of phrase start points, such as before-before-before-on. Be sure to leave a breath at the end of each two-bar phrase. Begin by playing only Am chord tones in the VII position (D form). See [Triads and Pentatonic Scales](#). For example, for the eight-bar verse of Ain't No Sunshine, use the pattern: before-before-before-on.

7. Emphasize Em7 chord tones of Am pentatonic

On the Em7 chord in bar 5, emphasize 4-5-b7 of Am pent. (b7-1-b3 of Em7). Loop bars 4 & 5. Play Am arpeggio tones on bar 4 and 4-5-b7 of Am pent. during the Em7.

8. The most common second key in songs is V, a chord built on the fifth step of the key

In bar 5, use E minor pentatonic to represent Em7. Loop bars 4-5.

Transpose. Play an Am pentatonic theme in bar 4 and play relatively the same numbered tones in bar 5 on the Em7.

Or **modify and adapt as necessary:** play an Am theme that involves b3, then repeat it on Em7 but change the b3 of A to "2", which changes the scale to Em pentatonic (as in transposing pentatonic scales). If there aren't enough chord tones of Em7 in your variation of Am with b3 changed to 2 for Em, ending on an A note during Em7 for example, add an Em chord tone afterward, such as "5" of A (an E note) or "b7" of A (a G note).

Learn to build Am9, Em9 and Dm9 arpeggios

9. Build Am9

In VII position, play A major scale fingering 2 (see [Reference Major Scale Fingering](#)), adding the sixth string, fifth fret A. Ascend the scale and flat the third and seventh, speaking the numbered tones aloud. Speak pairs of notes in swing eighths with b3 and b7. Ascend from 1 (sixth string fifth fret A) to 9 by labeling 1 and 2 in the higher octave as 8 and 9 (1-2-b3-4-5-6-b7-8-9). Then play the emphasized 1-b3-5-b7-9 alone to build the arpeggio. Do the same in the upper octave, beginning on fourth string seventh fret A. To create the appropriate A Aeolian scale for Ain't No Sunshine, flat the six also (b7,b3,b6). When you use b7, b7-b3, b7-b3-b6, or b7-b3-b6-b2 each result will be another of the seven reference major scale fingerings. See [Mode Cycles](#). Also see [Modal Chord Scales of Four Seven-Tone Scales](#).

10. Build Em9

In VII position, play E major scale fingering 5 (see [Reference Major Scale Fingering](#)). Ascend the scale and flat the third and seventh, speaking the numbered tones aloud. Speak pairs of notes in swing eighths with b3 and b7. Ascend from 1 (fifth string seventh fret E) to 9 by labeling 1 and 2 in the higher octave as 8 and 9 (1-2-b3-4-5-6-b7-8-9). Then play the emphasized 1-b3-5-b7-9 alone to build the arpeggio. Do the same in the upper octave, beginning on third string ninth fret E but adding the E note on first string 12th fret "E" for the "8" and the F# note on the first string fourteenth fret F# for the "9".

11. Build Dm9

In VII position, play D major scale fingering 6 (see [Reference Major Scale Fingering](#)). Ascend the scale and flat the third and seventh, speaking the numbered tones aloud. Speak pairs of notes in swing eighths with b3 and b7. Ascend from 1 (sixth string tenth fret D) to 9 by labeling 1 and 2 in the higher octave as 8 and 9 (1-2-b3-4-5-6-b7-8-9). Then play the emphasized 1-b3-5-b7-9 alone to build the arpeggio. Do the same in the upper octave, beginning on third string seventh fret D but adding the E note on first string 12th fret "E" for the "9".

Billie Jean - Progressive Improv Study in Bm

If you don't already have [iReal Pro](#), buy it for Mac, iOS or Android. Play with Ain't No Sunshine in the [All Favored playlist](#) (for iOS, download ALL FAVORED.html for iReal.)

1. through 4.

Perform steps 1 through 4 in [General Progressive Improv Study](#), above.

5. Alternate two-bar phrases of F#m pentatonic and F#m arpeggio

Notice that the second row of section A in Billie Jean iReal is played twice.

When using the F#m pentatonic scale, emphasize F#m chord tones within it. For strategies of emphasis, see [Establishing a Key](#).

The F#m-G#m-A-G#m is generally F#m7 with the passing G#m triad, so emphasize chord tones of F#m on the beat initially in all of the bars. F#m is the upper tones of Bm9, so it will harmonize in the upper range of pitch. Below, you'll learn how to alternately play during the Bm chord in the key Bm or emphasize tones of F#m pentatonic that are in versions of Bm (such as Bm7 or Bm9).

6. Phrase start points

Phrase start points are considered in relation to beat one of the first bar in the phrase. They can start before, on or after the first beat of the first bar. It's generally good to use some repetition and to have a change in the last phrase start point, to signify the end of the section.

Practice playing two-bar phrases with patterning of phrase start points, such as before-before-before-on. Be sure to leave a breath at the end of each two-bar phrase. Begin by playing only F#m chord tones in the IX position (A form). See [Triads and Pentatonic Scales](#). For example, for the twelve-bar verse of Billie Jean, use the pattern: before-before-before-on.

7. Bm7 chord tones in F#m pentatonic

On the Bm chord in bars 5-6 and 9-10, emphasize 1-b3-4 of F#m pentatonic (5-b7-1 of Bm7). Loop bars 3-6. Play F#m arpeggio tones on bars 3-4 and 4-5-b7 of F#m pentatonic during the Bm in bars 5-6.

8. Bm is IV minor, a common second key in songs

On the Bm chord in bars 5-6 and 9-10, use B minor pentatonic to represent Bm. Loop bars 3-6.

Transpose. Play an F#m pentatonic theme in bars 3-4 and play relatively the same numbered tones in bars 5-6 on the Bm.

Or **modify and adapt as necessary.** By raising the fifth of a minor pentatonic scale, it becomes

the pentatonic scale in a key up a perfect fourth. So, raising the fifth of F#m pentatonic changes the scale to Bm pentatonic.

Play an F#m theme that involves “5” (C#), then repeat the theme on Bm, but change the 5 of F#m (C#) to “b6” (“D”), which changes the scale to Em pentatonic (as in transposing pentatonic scales). If there aren’t enough chord tones of Bm in your variation of F#m with 5 changed to b6 for Bm, ending on an E note during Bm for example, add a Bm chord tone afterward, such as “1” of F# (an F# note).

Learn to build Am9, Em9 and Dm9 arpeggios

9. Build F#m9

In IX position, play F# major scale fingering 5 (see [Reference Major Scale Fingering](#)), ascending from scale tone 1, F# on the fifth string, ninth fret.. Ascend the scale and flat the third and seventh, speaking the numbered tones aloud. Speak pairs of notes in swing eighths with b3 and b7. Ascend from 1 (sixth string fifth fret A) to 9 by labeling 1 and 2 in the higher octave as 8 and 9 (1-2-b3-4-5-6-b7-8-9). Then play the emphasized 1-b3-5-b7-9 alone to build the arpeggio. Do the same in the upper octave, beginning on fourth string seventh fret A. To create the appropriate F# Aeolian scale for Billie Jean, flat the six also (b7,b3,b6). When you use b7, b7-b3, b7-b3-b6, or b7-b3-b6-b2 each result will be another of the seven reference major scale fingerings. See [Mode Cycles](#). Also see [Modal Chord Scales of Four Seven-Tone Scales](#).

Use the F#m9 arpeggio during F#m-G#m-A-F#m.

10. Build Bm9

In IX position, play B major scale fingering 2 (see [Reference Major Scale Fingering](#)). Add a “B” note to be able to hear the scale ascending from the chord root (“B”) by playing “B” on the sixth string seventh fret, followed by C# on the sixth string ninth fret, then continuing with major scale fingering 2 (the circled note on the fourth string should be on “B” at the ninth fret.

Ascend the scale and flat the third and seventh, speaking the numbered tones aloud. Speak pairs of notes in swing eighths with b3 and b7. Ascend from 1 (fifth string seventh fret E) to 9 by labeling 1 and 2 in the higher octave as 8 and 9 (1-2-b3-4-5-6-b7-8-9). Then play the emphasized 1-b3-5-b7-9 alone to build the arpeggio. Do the same in the upper octave, beginning on third string ninth fret E but adding the E note on first string 12th fret “E” for the “8” and the F# note on the first string fourteenth fret F# for the “9”.

Use the Bm9 arpeggio during the Bm chord.

Always Remember Us This Way Improv Study in C

If you don't already have [iReal Pro](#), buy it for Mac, iOS or Android. Play with Ain't No Sunshine in the [All Favored playlist](#) (for iOS, download ALL FAVORED.html for iReal.)

This study regards improv on the verse Am-Fadd9-C-G.

1.1. through 4.

Perform steps 1 through 4 in [General Progressive Improv Study](#), above.

5. Alternate two-bar phrases of the key pentatonic and the key triad arpeggio

Alternate two bar phrases of C major pentatonic and C major arpeggio, but avoid or de-emphasize the "C" note during the G chord.

6. Phrase start points

Phrase start points are considered in relation to beat one of the first bar in the phrase. They can start before, on or after the first beat of the first bar. It's generally good to use some repetition and to have a change in the last phrase start point, to signify the end of the section.

Practice playing one-bar phrases with patterning of phrase start points on the Am-F-C-G chord progression (section A in iReal), such as after-after-after-on. Be sure to leave a breath at the end of each two-bar phrase. Begin by playing only key triad tones. See [Triads and Pentatonic Scales](#).

7. chord tones of a secondary chord in the key pentatonic

To establish a harmonic relationship with secondary chords, those chords other than the key chord. Learn how versions of the secondary chord can include most or all of the notes of the key triad.

Groups of consecutive chords can be treated as a single chord by considering alternate versions of chords that provide notes common to all of the chords. See [Commonality Chords](#) and [Substitution/Shared Thirds: Secondary Roots](#).

Emphasize Am chord tones during Am-F-C, since it is part of Am, Fma7 and C6. Am pentatonic is the same as C major pentatonic. Or emphasize C major chord tones (1-3-5) during Am-F-C, since C major is part of Am7 (6-1-3-5 of C), Fma9 (4-6-1-3-5 of C) and C major (1-3-5 of C).

In the key of C, the G major triad is tones 5-7-2. C major pentatonic is tones 1-2-3-5-6- of C. So, during the G chord, emphasize 5 and 2 (G and D notes).

8. use theme and variation for secondary chords

Transpose. Play an Am theme through the Am-F-C chords, treating the key as Am and

using the commonality discussed above where Am is part of Am-Fma7-C6. Think of it by number, such as b3-5-1 (descending).

During the G chord, play the same relative numbers generically in the key of G: 3-5-1 in G.

Or **modify and adapt as necessary**. The G major chord is 5-7-2 of C. C major is 1-3-5 of C. If you use the theme 3-5-1 of C (ascending) on Am-F-C changing it to 3-5-7 would harmonize with G (G6 is 5-7-2-3 of C).

9. Learn to build ninth arpeggios for all of the chords

See [Building Ninth Arpeggios](#) at the beginning of this section.

Learn to build Am9, Fma9, Cma9 and G9.

Fast Car Progressive Improv Study

If you don't already have [iReal Pro](#), buy it for Mac, iOS or Android. Play with Ain't No Sunshine in the [All Favored playlist](#) (for iOS, download ALL FAVORED.html for iReal.)

This study regards improv on the verse ||:D / A / | F#m / E /:||

1. through 4.

Perform steps 1 through 4 in [General Progressive Improv Study](#), above. **5. Alternate two-bar phrases of the key pentatonic and the key triad arpeggio**

Alternate two bar phrases of A major pentatonic and A major arpeggio, but avoid or de-emphasize the "G#" note during the E chord.

6. Phrase start points

Phrase start points are considered in relation to beat one of the first bar in the phrase. They can start before, on or after the first beat of the first bar. It's generally good to use some repetition and to have a change in the last phrase start point, to signify the end of the section.

Practice playing one-bar phrases with patterning of phrase start points on the D-A-F#m-E chord progression (section A in iReal), such as on-after-after-on. Be sure to leave a breath at the end of each two-bar phrase. Begin by playing only key triad tones. See [Triads and Pentatonic Scales](#).

7. chord tones of a secondary chord in the key pentatonic

To establish a harmonic relationship with secondary chords, those chords other than the key chord, learn how versions of the secondary chord can include most or all of the notes of the key triad. Groups of consecutive chords can be treated as a single chord by considering alternate versions of chords that provide notes common to all of the chords. See [Commonality Chords](#) and [Substitution/Shared Thirds: Secondary Roots](#).

The notable different chord is E. To change A major pentatonic to E pentatonic, descend the tone cent (A) a half step (to G#). OR, you could emphasize tones 2-5 of the A major pentatonic scale (B-E), which are common to the E major chord.

8. use theme and variation for secondary chords

Transpose. play an A major pentatonic theme on D A and F#m chords, then transpose it to use the same numbered tones in E for the E chord (add E chord tones if necessary if the theme does not emphasize E chord tone enough),

Or **modify and adapt as necessary.** Play an A major pentatonic theme on D A and F#m chords, then still play it in A, but modify it to change emphasis of E chord tones. For example, if your theme featured a C# note for A, change the C# to a B note for the E chord.

9. Learn to build ninth arpeggios for all of the chords

See [Building Ninth Arpeggios](#) at the beginning of this section.

Learn to build Dma9, Ama9, F#m9 and E9.

In IX position, play an A major scale. Build a Dma9 by ascending the A major scale from 4 (D), emphasizing every-other note until you have 5 emphasized notes, making a Dma9. Note the highest three of those notes are 1-3-5, an A major triad. This shows that A major pentatonic can be used over the D chord. The chords A and F#m can use A major pentatonic, since A major pentatonic has the same notes as F#m pentatonic.

Suggested Songs for Improv with Pentatonic Scales

Use the All Favored playlist in the iReal app to practice loops or entire sections of songs. Here is a [link to the file: All Favored iReal](#) Ireal search criteria will find songs with long durations of the featured key. Also see the [jgleason6 Spotify profile](#). You may need help finding the bullet character. See the instructions below the mode table.

Jessica in A major

Johnny B. Goode in Bb major except Bb major with b3 during the Eb7 chord

Just A Girl section A in D major, section B in Bm

Just the Way You Are in F major

Late in the Evening - major pentatonic in the key of each chord

Love's Theme in D except Gma7 in G major, Gm and Gm6 in Gm, Em7-G/a-A in Em

Lovely Day in E except Cma9-Dma9-Am-Bm in the key of each chord

Man in the Mirror (Scary Pockets) sect. A in Gma, sect. B in Am,

First sect. C in Gma except Cma on C, Gm pent b5 on C#dim7, Dm pent on D7#9.

Second sect. C in Abma except Dbma on Db, Abm pent b5 on Ddim7, Ebm pent on Eb7#9.

Me and Julio Down by the Schoolyard-intro and sect. C and last five bars of sect. B in Ama.

Otherwise, play in the key of each chord but A-B7 is Ama pent., D//G is Dma. pent.

Mercy, Mercy, Mercy in Bb. - sect. A in the key of each chord. Sect. B first four bars, Bbm pent with natural 3, Cm7-Dm7-Gm in the key of each chord.

My Father's Eyes-A sections in C#m. B sections and C section in the key of each chord.

My Girl in C major, except the last sections A and B in D major

Redemption Song in G major except section C and coda (ending) in Em.

People Get Ready in D

Ramble On in E major, rock sections in Em (not in iReal: play with original or find backing track on Youtube)

Santeria. Key is E major. Play in the key of each chord but treat E-D#m7-C#m7 as C#m.

Seven Come Eleven in Ab major. In section B, play in the key of each chord.

Sitting on the Dock of the Bay. Key of G major. Play in the key of each chord.

Stand By Me-key of G major. Play in the key of each chord.

Stir It Up in A major

Things Ain't What They Used to Be in F major

Third Stone from the Sun in E major (not in iReal: play with original or find backing track on Youtube)

Three Little Birds in the key of A. Play in the key of each chord.

Tiny Dancer-Key of C major. Play in the key of each chord.

Tom Dooley in E major

Under the Bridge. Intro in D major. Sections A and B are in the key of E major-play in the key of each chord. Section C is in Am with a major third during the A chord.

Waiting on the World to Change is in D major except section C is G minor pent. with a major third.

What's Going On-key of E. Play in the key of each chord.

When I Was Your Man-in the key of C major. Play all in the key of each chord, except play Am-C as Am and Am-D7 as Am.

Whiter Shade of Pale - Play C-C/B-C/A-C/G as C major, F-F/E-Dm-Dm/C as F major and G-G/F-Em-Em/D as G major.

Yellow Ledbetter-in the key of E major. Play in the key of each chord.

MAJOR SCALE MODE (MOOD) CYCLES

Expressive Modes in Order of Darkening

In the tables of diagrams below, the modes are shown in a darkening sequence from left to right. See [Modes/The Expressive Use of Modes](#). As you progress through each row from left to right, first the sharp four in Lydian mode is made natural, lowering it chromatically (by a half step). This darkens the mood from the exceedingly bright mood of Lydian to the commonplace bright mood of major (Ionian) mode. Continuing to the right in each row flatted tones are accumulated in the order b7-b3-b6-b2-b5 (a numeric order of fourths), progressively darkening the mood. This succession of darkening modes is a common basis of composition, arranging and improvisation.

typing the bullet (•) character

Computers. The bullet (•) character below is option+8 on a computer.

On iOS (iPhone or iPad), tap the 123 key to open the number keypad. Tap the #+= key to go to the second screen of the number keypad and select the bullet point symbol key at the end of the second row. On some versions of iOS, you’ll need this alternate method: type and hold the hyphen key to evoke a palette with the bullet.

Android phones. Tap the ? 123 key on the keyboard.

Tap the =< key to go to the second set of symbols on the keyboard.

Select the bullet symbol (•) on the first row to insert it into the messaging or document app.

Hypothetical Ninths for Melody Only

The Phrygian m7b9 (IIIIm7b9) and Locrian m7b5b9 (VIIIm7b5b9) are not currently accepted as chords. You won't find them in any of the forty or so fake books in circulation. They can be used melodically, however, as long as the flat nine is not sustained, but used as a neighboring tone or passing tone.

Minnie the Moocher improv with three-pulse rhythms and core melody - [click to play](#)

[illegible]

The first system of the musical score for 'The Sound of Silence' by Simon & Garfunkel. It features a treble clef and a key signature of one flat (B-flat). The notation includes a melody line with a 5-measure rest, followed by a series of chords: Em, Em, C7, C13, B7(#5), and Em. The bass line is represented by a TAB (Tuning) staff with fret numbers: 7, 7, 11, 10, 8, and 8.

The second system of the musical score for 'The Sound of Silence' by Simon & Garfunkel. It features a treble clef and a key signature of one flat (B-flat). The melody consists of half notes: E4 (labeled Em), G4 (labeled 16), Bb4 (labeled C7), C5 (labeled C13), Bb4 (labeled B7(#5)), and E4 (labeled Em). The guitar accompaniment is shown in TAB format with fret numbers: 7, 8, 7, 8, 11, 10, 8, and 9.

The image shows a musical score for the song "The Sound of Silence" by Simon & Garfunkel. The score is written for guitar, bass, and drums. The guitar part is in E minor and features a complex melodic line with triplets and a key signature change to C major for the final two measures. The bass and drums provide a steady accompaniment.

SEVEN MAJOR SCALE FINGERINGS

Also see “[Full-Fretboard Major Scale Visualization](#)”.

Memorize these fingerings and you’ll be prepared to relate a major scale to any chord, anywhere on the fretboard. Pay close attention to the numbers between the tablature and the music notation for each note. These numbers indicate the steps of the major scale on which each note occurs. In each fingering, notice the half steps between “3” and “4” and between “7” and “1”,

In the numbering system shown at the left of each staff below (fingering 1, fingering 2, etc.), each fingering is numbered after the lowest reachable tone (by pitch) on the sixth string. This is emphasized by the *circled* numbers on the diagrams. Numbers shown in parenthesis on the diagrams are optional fingerings for the same scale tone (by number) on an alternate string.

The text beneath the title of each fingering diagram (“reach with index finger”, “no reaches!”, etc.) describes which (if any) fingers should have to reach out of the range of four consecutive frets. These references do not necessarily include the optional notes on the third string.

The diagram shows a 7-string fretboard with the following fret numbers: 7 3 6 2 | 7. Below the fret numbers are five boxes representing fret positions. The first box contains the number 1, the second contains 4, the third is empty, the fourth contains 5, and the fifth contains 1. Below these boxes are two more rows of boxes. The first row contains the numbers 2 5 1 4 6 2. The second row contains five empty boxes.

IN-POSITION AND THREE-NOTE-PER-STRING FINGERINGS

Major scale fingerings are numbered in this course according to the number of lowest note fingered with the index finger on the sixth string. The fingerings below major scale *in-position* fingerings. Other fingerings called *three-note-per-string major scale* fingerings use slightly different rules regarding playing in position. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

In-Position Fingerings, numbered by fingers

The in-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall. Here are the three-note-per-string major scale fingerings:

Three-Note-Per-String Fingerings, numbered by fingers

Three-note-per-string major scale fingerings shown above combine in-position fingerings, and are numbered accordingly. Fingering 1/2 combines in-position fingerings 1 and 2; fingering 2/3 combines in-position fingerings 2 and 3; and so on.

In-Position Fingerings, numbered by scale tones

fingering 1	fingering 2	fingering 3	fingering 4	fingering 5	fingering 6	fingering 7

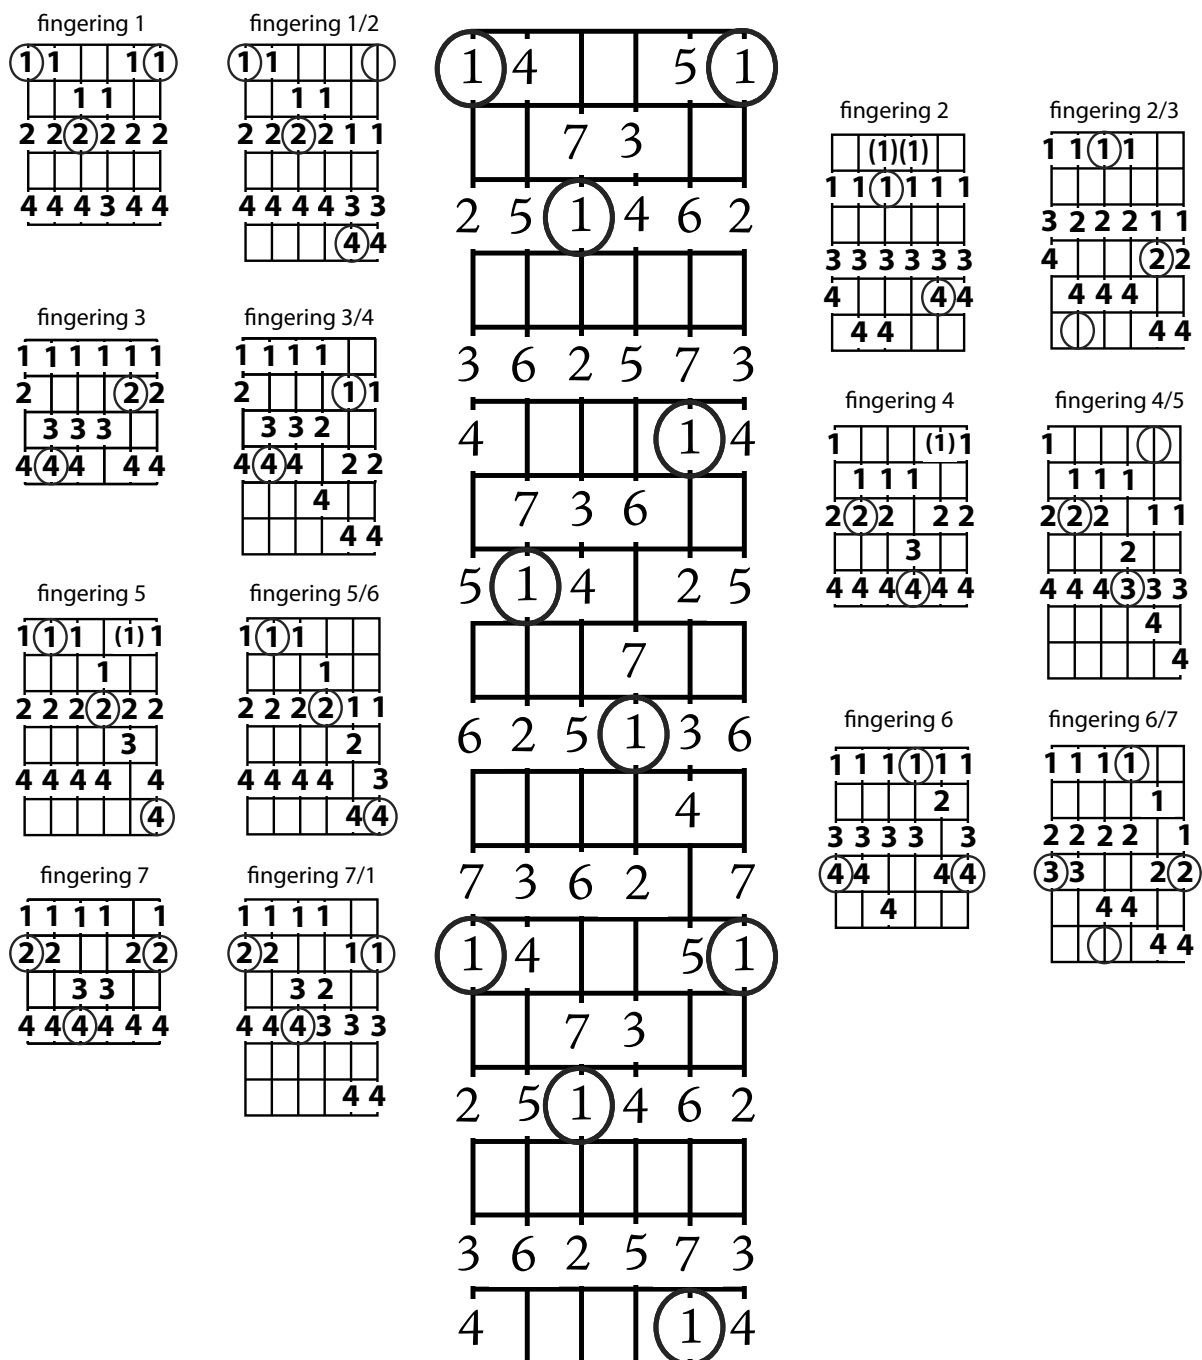

Three-Note-Per-String Fingerings, numbered by scale tones

fingering 7/1	fingering 1/2	fingering 2/3	fingering 3/4	fingering 4/5	fingering 5/6	fingering 6/7

FULL-FRETBOARD MAJOR SCALE

All of these fingerings (including the large, full-fretboard fingering) can be played in any key by locating the circled notes on the desired tone center. It is usually best to use the circled notes on the larger strings to locate the key. For example, a “G” major scale would have the sixth string, third fret circled. The numbers on the diagrams are finger numbers, where “1” is the index finger, “2” is the middle finger, “3” is the ring finger and “4” is the little finger.

- **Lower Chromatic Embellishment**
- **Passing Chromatics**
- **Blue Notes and Microtonal Bends**

INTRODUCTION TO CHROMATICS

The Latin root word “chrom” means color. We supplement the tone color of scales and arpeggios by adding coloring tones called *chromatics*.

Targeting Chord and Pentatonic Tones

One or more consecutive chromatics can ascend to a chord tone to target the chord tone. When more than two ascending chromatics are used in this manner, they should be associated with the setup or target chord by putting chord tones on the beat (metric accent) or emphasized by some other means. See [Chromaticized Arpeggios](#). The simplest of these ascending chromatics is a single one, called a *lower chromatic embellishment*.

LCE = lower chromatic embellishment. Root, third, fifth and sixth are chord tones. [click to play](#)

♩ = 135

Swing Eighths

Example of Lower Chromatic Embellishment (LCE) for C13. The notation shows a melodic line in 4/4 time with a swing feel, using eighth notes. The chord tones (root, third, fifth, sixth) are marked above the notes. The LCE is indicated by a bracket under the notes. The fretboard diagram below shows the corresponding fret numbers for the T, A, and B strings.

Chord: C13

Notes: LCE third root LCE fifth third LCE sixth

Fretboard Diagram (T, A, B strings):

String	4	5	5	7	8	5	4	5	8	6	5
T											
A											
B											

Upper chromatic embellishment is rare. It can be used on a diminished seventh arpeggio, in approaching each tone from a half step above, making a half/whole diminished scale

UCE = upper chromatic embellishment. CT are chord tones. [click to play](#)

♩ = 125

Swing Eighths

Example of Upper Chromatic Embellishment (UCE) for E7 and Am. The notation shows a melodic line in 4/4 time with a swing feel, using eighth notes. The UCE is indicated by a bracket under the notes. The fretboard diagram below shows the corresponding fret numbers for the T, A, and B strings.

Chord: E7, Am

Notes: UCE CT UCE CT UCE CT UCE CT UCE CT

String	7	9	8	6	5	6	5	8	7	5	8	9	8	6	5	8	5	7	5	7	7
T																					
A																					
B																					

One or more passing chromatics can be inserted between one chord tone and another or between one scale tone and another. When a scale tone is also a chord tone, consider it a chord tone, since the chord tone is more important.

LOWER CHROMATIC EMBELLISHMENT

A lower chromatic embellishment is a tone that precedes a chord tone from a half step below, immediately before the chord tone. From about 1900 to 1920, in early blues and ragtime music, lower chromatic embellishments were played with long duration, typically a half or a third of a beat (an eighth note or an eighth note triplet note in 4/4 time). I'll call that a *ragtime lower chromatic embellishment*. By about 1940, it became fashionable to play the lower chromatic as a grace note (very short duration). I'll call the grace note type a *modern lower chromatic embellishment*.

PASSING CHROMATICS

Passing chromatics fill in-between the notes of pentatonic scales. Most commonly between whole steps. The most common whole step passing chromatic is in minor pentatonic between flat seven and one and in major pentatonic between two and three.

BLUE NOTES AND MICROTONAL BENDS

Half Step Release, Down a Whole Step

Releasing (bend) half step followed by a note down a whole step . Grace note or pre-bend a half step and release as an eighth note to a note down a whole step. The third note should be a chord tone. Use on b3-2-1, b5-4-b3 or b7-6-5 of the current chord. The example below is common in country music.

[click to play](#)

♩ = 150
Swing Eighths

G

Chicken Pickin'

At the beginning of the James Burton/Scotty Moore example, there is a gradual release on the third string. “Chicken pickin” is employed on the repetitions of the note on the third string, using thumb next to the pick to mute the downstrokes and the pick on the upstrokes (upstrokes *on* the beat) while picking the pre-bent “A” bent to “B” and gradually releasing the bend. Use the middle fingernail to pick the stationary flat seven on the second string. The slur from flat three to three near the end of the James Burton portion (labeled “b3” and “3”) are a ragtime lower chromatic embellishment.

darkening natural thirds with grace note flat thirds

The James Burton/Scotty Moore example below (below “Chicken Pickin”), ends with a modified version of Scotty’s figure, adding a grace note lower chromatic flat third before the natural third. The grace note flat third that darkens the mood. This is common in blues-related styles, like rockabilly.

MASTER SCALE PATTERNS IN FOURTHS

Imagine Tuning the Guitar in Fourths

A *perfect fourth* is an interval equal to that between the first and fourth notes of a major scale. The interval looks graphically the same on all adjacent pairs of strings except the second and third string. The lower row of diagrams illustrate perfect fourths spanning major scale steps “1” through “4”.

Stacked perfect fourths are successive perfect fourths. They occur on the fretboard in this shape. The notes on the smallest two strings (on the far right) are one fret toward the guitar body (down on the diagram) because the smallest two strings are tuned a half step flat in relation to the other strings.

Scale fingering on the guitar would be greatly simplified if it were tuned entirely in perfect fourths. Chords, however, would be difficult to finger. The diagram below is a hypothetical fourteen-string guitar (suggesting it is part of a conceptual guitar with an infinite number of strings), tuned entirely in perfect fourths. The dots indicate stacked fourths.

THE MASTER PENTATONIC SCALE PATTERN

The master pattern for the pentatonic scale occurs on five strings tuned in perfect fourths, where you would tune each string to the next at the fifth fret. The common pentatonic scale is the minor 7/11 and major 6/9 pentatonic scale, depending on which note is assigned as the tone center.

Here is the master pentatonic scale pattern as it would occur on a conceptual “infinite string and infinite fret” fretboard tuned in perfect fourths. The pattern repeats on smaller strings (to the right on each diagram below), it repeats one fret lower. Each hexagon () is the major pentatonic tone center (or the flatted third of the minor pentatonic) The and a diagonal line at the upper right of each hexagon connects it to the beginning of the next pentatonic master pattern.

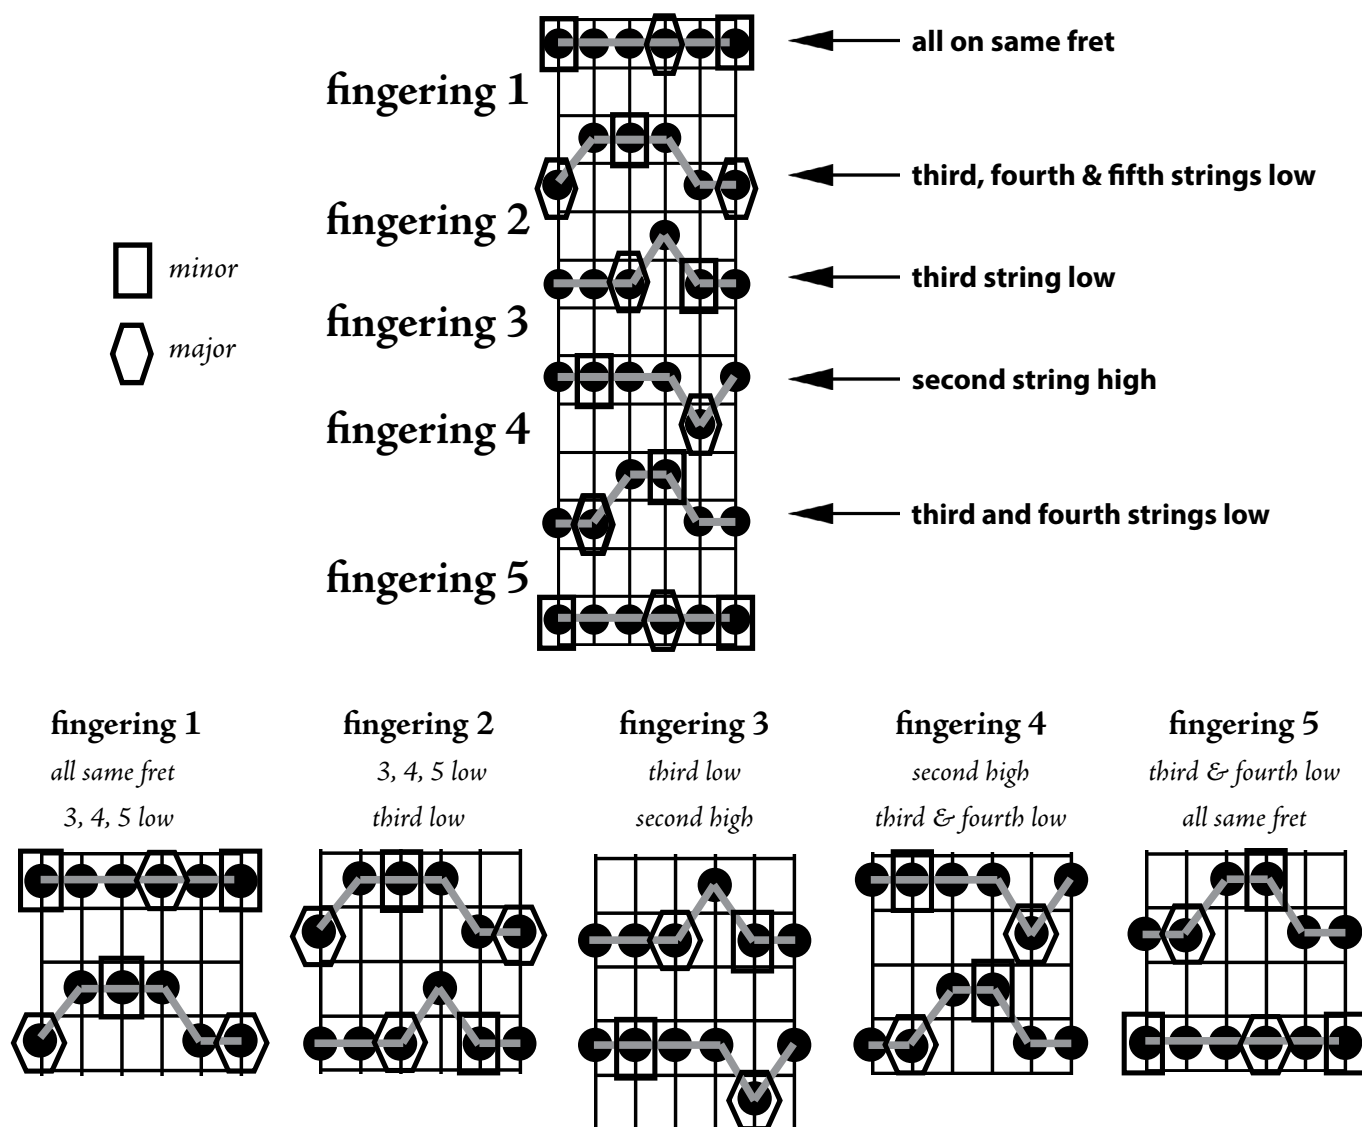

Each of the five common pentatonic scale fingerings below are extracted from the conceptual “infinite string and infinite fret” fretboard. In each fingering, the notes on the two smallest strings (the far right of each diagram below) are moved one fret toward the guitar body, which is down on the diagram. This compensation is caused by the nature of the “flat-tuned” two smallest strings on the guitar. (strings one and two are tuned a half step (one fret) flat in relation to the other strings. The rectangles are minor tone centers and the hexagons are major tone centers. Also, see [Pentatonic Scales and Octave Shapes/ The Pentatonic Master Pattern](#).

PENTATONIC LINES

The common pentatonic scale, used for minor and major pentatonic can be conceived in lines to aid recollection of the five fingerings. The five unique lines are identified in the movable full-fretboard at the right of the diagram below.

The lines are depicted in relation to notes all on the same fret by noting exceptions where some of the notes are one fret low (toward the head of the guitar) or high (toward the guitar body). “Low one five, four, three” indicates the notes on the third, fourth and fifth strings are one fret “low” in relation to the other notes on that line. The rectangles are minor tone centers and the hexagons are major tone centers.

“Major Tone Center Diagonal”. Notice that the major pentatonic tone center is at the left of this diagonal pair, except when it is on the third string.

THE MASTER MAJOR SCALE PATTERN

The major scale-tone sequence “7-3-6-2-5-1-4” forms “stacked” perfect fourths, where each note to the next higher pitch is a perfect fourth, equivalent to a five-fret interval on a single string (counting the difference between the two fret numbers, such as from fret one to six).

To suggest a guitar with infinite frets and infinite strings, here is a fourteen-string “perfect fourth” guitar with major scale tones “7-3-6-2-5-1-4” in stacked fourths. Notice the interval shape from major scale-tones “4” to “7”. The 7-3-6-2-5-1-4 number series is all on one fret, then repeats up one fret at the diagonal intersection between major scale tones. On this conceptual guitar, each string would be tuned at its fifth fret to the next smaller string. In contrast, standard guitar tuning tunes each string a the fifth fret to the next saller string, *except* the third string, fourth fret is tuned to the second string open. The third string is the third from the smallest string.

The scale tone which is a fourth above major scale tone “4” is major scale tone “7”. The interval from major scale tone “4” to major scale tone “7” is an augmented fourth. Notice on the diagram at the left that each span of four notes 1 to 4, 2 to 5, 3 to 6, etc. is five frets inclusively, except the span from “4” to “7” is six frets inclusively.

The interval fingerings for scale steps “4” to “7” on each pair of strings on a standard-tuned guitar are shown below. On all adjacent pairs of strings tuned in perfect fourths, except the third and second strings, the interval shapes are the same, with two notes making a diagonal shape on *adjacent* frets. Exceptionally on the second and third strings (which are *not* tuned in perfect fourths), major scale-tone “4” to “7” have one “empty” fret between them.

The Master Major Scale Pattern on the Infinite Fretboard

the infinite fretboard

The master major scale pattern is shown at the left below. Notice the index finger notes “7-3-6-2-5-1-4”. At the right below, the major scale master pattern is shown on a conceptual infinite-stringed and infinite fretted guitar, to show how it repeats.

compensation for the flat-tuned first and second strings

Strings one and two, the two smallest strings on the guitar are tuned a half step (one fret) flat in relation to strings three through six. On strings six, five, four and two, the pitch at the fifth fret is the same as the next smaller string open. On the third string, the fourth fret is the same pitch as the second string open. This tuning causes strings one and two to be tuned relatively a half step (one fret) flat in relation to the other strings.

Therefore, when we fret chords, scales and intervals on the guitar, anything conceived on strings three through six must be modified when moved to involve strings one and two by moving any note on strings one or two a half step toward the guitar body. When applying the major scale master pattern, this compensation must be applied.

compensation for the augmented fourth between scale tones four and seven

As mentioned earlier, the interval from scale tones four to seven is a half step larger than any other fourth (7 to 3, 3 to 6, 6 to 2, 2 to 5, 5 to 1 or 1 to 4). Since the major scale master pattern starts with scale tone seven (its at the upper left on [the master major scale pattern diagram](#) above), the master pattern must repeat on the fretboard one fret toward the guitar body (down on the diagram), as you can see on [the master major scale pattern on an infinite fretboard diagram](#) above.

Three-Note-Per-String Major Scale Fingerings from the Master Pattern

By playing groups of six strings, you can make three-note-per-string fingerings. Remember to make the compensation for the flat-tuned strings one and two by moving the notes on the first two strings up a half step (one fret) toward the guitar body (down on the diagram). The fingerings are numbered after the lowest pitch on the sixth string, shown on the upper left of the rectangle. For each fingering below, the diagram at the right is the compensated fingering to be used on a standard guitar.

Converting Three-Note-Per-String Major Scale Fingerings to In-Position Fingerings

For each fingering below, strings six through three of the first diagram are combined with strings two and one of the second diagram to make the in-position finger shown in the third diagram at the right. Notice that in each case, one of the notes in the first diagram on the third string occurs on the second string in the second diagram (with the same numbered scale tone). One of these is removed, usually the duplicate on the third string.

in-position fingering one

In-position fingering one (far right) is made from three-note per string fingerings one and seven at the left and middle. The “5” in parenthesis on the second string in the diagram is a redundant repetition of the “5” on the third string and can be omitted.

in-position fingering two

IP fingering two (far right) is made from three-note per string fingerings two and one at the left and middle

in-position fingering three

IP fingering three (far right) is made from three-note per string fingerings three and two at the left and middle

in-position fingering four

In-position fingering four (far right) is made from three-note per string fingerings four and three at the left and middle. The “1” in parenthesis on the second string in the diagram is a redundant repetition of the “5” on the third string and can be omitted.

in-position fingering five

In-position fingering five (far right) is made from three-note per string fingerings five and four at the left and middle.

in-position fingering six

In-position fingering six (far right) is made from three-note per string fingerings six and five at the left and middle.

in-position fingering seven

In-position fingering seven (far right) is made from three-note per string fingerings seven and six at the left and middle. The “4” in parenthesis in the diagram on the far right is a redundant repetition of the “4” on the third string and can be omitted.

See also [Full-Fretboard Major Scale Visualization](#).

MAJOR SCALE LINES

The major scale can be visualized in a scanning fashion by looking at the notes going across the strings, parallel to the frets. At scale tones 2, 3 and 6 on the sixth string, the “lines” include notes all on the same fret.

line 1 - “three and four high”

notes on its third and fourth strings are one fret toward the guitar body

line 2 - “a straight line”

(lines 2, 3 and 6 are straight lines)

line 3 - “a straight line”

(lines 2, 3 and 6 are straight lines)

line 4 - “three, four and five high”

notes on its third, fourth and fifth strings are one fret toward the guitar body

line 5 - “three high”

the note on its third string is one fret toward the guitar body

line 6 - “a straight line”

(lines 2, 3 and 6 are straight lines)

line 7 - “two low”

the note on the second string is one fret toward the head of the guitar

SERIAL ANTI-METRIC GROUPING

What is Serial Anti-Metric Grouping?

Serial refers here to a repeated series of notes. Meter is the regular beat pulse of the rhythm, divided into regular numbers, most commonly bars of four beats. When repeated groups of notes don't occur evenly within four beats, they are *anti-metric*. This would be the case with a repeated figure that is one and a half beats long, such as three eighth notes.

We find it interesting to hear anti-metric groups, especially when they soon resolve by playing a note on the first beat of the next bar. With eighth notes in 4/4 (a half beat each) a grouping of two sets of three followed by a set of two (3-3-2) would finish a bar and could be followed by a note on the first beat of the next bar.

In 4/4 time, there are four beats per bar and typically two parts per beat, called eighth notes. If eighth notes in 4/4 are grouped in some way *other than* two per beat, it sets up a secondary division of the bar. There are eight eighth notes per bar, grouped in pairs as "2-2-2-2". If they are somehow grouped as "3-3-2", it has a different sound and feel.

Dividing the Parts of the Bar Differently

Define groups by making the first note of each group in some way unique, by accenting it or slurring it, making all the other notes a pivot point (repeating the same note), making the first note of the group a pivot point and changing all the other notes or with fragment patterns.

anti-metric fragment patterns

The simplest fragment patterns are consecutive scale tones, expressed as "1-2-3" for three consecutive scale tones ascending or "3-2-1" for three consecutive scale tones descending. "1-2-3-4" would be four scale tones ascending, and "4-3-2-1" would be four scale tones descending.

In their standard expression, the number of notes in the fragment pattern is the same as the number of notes per beat. So, "1-2-3" or "3-2-1" is played as a standard practice in triplets. "1-2-3-4" or "4-3-2-1" is played in standard practice as four sixteenth notes (or four eighth notes).

When fragment patterns are used with a *different* number of notes in the pattern and on the beat, such as "1-2-3-4" in triplets or "1-2-3" in sixteenth notes they don't come out evenly on the beats. It takes more or less than one beat for a fragment to occur. These are *anti-metric fragment patterns*. Examples are shown below.

anti metric fragment patterns - [link to video](#)

Once you memorize each twelve-note sequence below you should find it easy to apply the same grouping and fragment pattern to another scale or arpeggio. You should be able to hear the pattern you're applying apart from the notes on which it is applied.

♩ = 90

3-2-1 fragment in triplet

3-2-1 fragment in sixteenths

3-2-1 fragment in triplets, making a repeating twelve-note sequence

the twelve-note sequence repeating in sixteenths (divided by dotted line)

The image displays three musical examples, each consisting of a treble clef staff and a guitar TAB staff. The first example shows a 3-2-1 fragment in a triplet (quarter notes) and then in sixteenth notes. The second example shows the 3-2-1 fragment in triplets, creating a repeating twelve-note sequence. The third example shows the twelve-note sequence repeating in sixteenth notes, divided by a dotted line. The TAB staff for each example provides fret numbers for the guitar.

four pairs of eighths grouped anti-metrically

Eight eighth notes in a bar of 4/4 constitute four beats with two notes per beat. They can also be grouped as “332” or “233”.

four quads of sixteenths grouped anti-metrically

Sixteen sixteenth notes in a bar of 4/4 constitute four beats with two notes per beat. They can also be grouped as “3-3-3-3-4”, “4-3-3-3-3”, “2-3-3-3-3-2”, “1-3-3-3-3-3”, “3-2-3-2-3-3”, “3-3-4-3-3” (Pick Up The Pieces) or “3-3-3-2-3-2”.

Chuck Berry's Johnny B. Goode intro solo, bars 5-8 is based on 2-3-1-2-3-1-2-2.

four eighth triplets grouped anti-metrically

4-4-4 in 12/8.

sensing the up comping beat one

Whether you are obscuring the beat with an anti-metric group like groups of three eighth notes in 4/4 or playing on consecutive offbeats, you need to sense where to come back in on beat one in the next bar.

RHYTHMIC DISPLACEMENT

What is Rhythmic Displacement?

Rhythmic displacement is a form of rhythmic theme and variation. A rhythmic theme is moved earlier or later in time. When the theme begins with notes of equal value, it can be displaced by thinking which of the notes is on the beat, as described below in “Which Note Is On The Beat?”.

Which Note is on the Beat?

The most straightforward manner of rhythmic displacement is where one of the notes is placed on a beat, most easily on the first beat of the bar. When notes have equal time values such as all eighth notes or all sixteenth notes at the beginning of the rhythmic theme, we can displace by choosing which note is on the beat. When the rhythmic theme is irregular and its first notes are not of equal value, or interrupted by rests, it gets more complicated.

Displacing Rhythmic Themes of Regular Pulses

displacing fragment patterns to create new melodies

The use of fragment patterns are a good way to start practicing rhythmic displacement. As originally conceived, one fragment pattern can occur on each beat, such as 123 ascending or 4321 descending.

With the use of rhythmic displacement, fragment patterns become far more interesting. New melodies of sorts are created when you re-evaluate what happens on each beat.

relating chord tones to the beat

We generally want tones of the current chord on the beat often enough to reinforce the sound of the chord. The chapter [Relating Chord Tones to the Beat](#) shows how to assure that tones on the beat are frequently current chord tones, to emulate the sound of the current chord. If you are playing eighth notes with chord tones on the beat and non-chordal tones on the offbeat, displacing the notes so the non-chordal tones are on the beat will suggest a different chord, usually interpreted as a chord whose root is up or down a scale step from the original chord root, or on the fifth of the original chord root.

Improv Level 2: Key Scale Pentatonic

- **Principles**
- **Seven Pentatonic Scale Types with Examples**
 - Minor Pentatonic (m7/11)
 - Minor Pentatonic with Major Third Option (7/11)
 - Major Pentatonic (ma6/9)
 - Major Pentatonic with Optional Flat Three (m6/9)
 - Minor Pentatonic with Flat Five (m7/11b5)
 - Minor Pentatonic with Six Instead of Flat Seven (m6/11)
 - Diminished Seventh Add Four (m6/11b5)
- **Added Tones**
- **Free Association With Pentatonic Tones**

PRINCIPLES

Each Scale Tone Will Fall into One of These Four Categories:

- an actual chord tone
- a pleasing added chord tone
- a blue note (usually b3, b6 or b7 against natural versions of the same numbers)
- a non-chordal tone (a neighboring scale tone or a passing scale tone)

Think Vocally

You should imagine your melody in a vocal context. Sing or hum your melodic lines as you play. Our brains are wired much more directly to our vocal mechanism than to the fretting and plucking mechanisms.

Think in Key Scale Numbers

Develop an awareness of the numbers representing what you are playing. Thinking in scales named after the key unifies the melody by keeping it in one key and making it easier to follow for the listener. See [Modes](#) and [Key scales](#).

Think primarily in key scale, secondarily in chord scale (a scale named after the current chord). To think in key scale, determine the key (the root of the chord you expect the piece to end on) and relate all notes to a major scale named after the key. To think in chord scale, relate all notes to a major scale named after the root of the current chord.

Many guitarists are particularly guilty of thinking too much in chord scale, which blocks the melody into keys named after each chord and loses the continuity of the overall key.

Most Important Blues Rock Pentatonic Fingering

It's important to know the limited areas of the fretboard that have been found most useful in Blues Rock. These same areas are relevant to most styles, even when not bending notes. Learn these areas in [Pentatonic Fingering/Most Important Blues Rock Pentatonic Fingering](#).

SEVEN PENTATONIC SCALE TYPES

Naming Pentatonic Scales

When I began teaching back in the late sixties, there was no agreement the naming of pentatonic scales. “Blues pentatonic” or jazz pentatonic each could mean different things. I wanted a universally know naming system, so I used chord names. Now, I realize that not everyone knows the chord naming system (see [Chord-Naming Conventions](#)), so at first I use a descriptive name (minor pentatonic), along with the chord name version (minor 7/11).

- ✦ minor pentatonic (m7/11, includes 1, b3, 4, 5 and b7)
- ✦ minor pentatonic with optional natural three (7/11, includes 1, 3, 4, 5 and b7)
- ✦ minor pentatonic with flat five (m7/11b5, includes 1, b3, 4, b5 and b7)
- ✦ minor pentatonic with six instead of flat seven (m6/11, includes 1, b3, 4, 5 and 6)
- ✦ minor pentatonic with six and flat five, also called diminished seven add four (°7/11, includes 1, b3, 4, b5 and 6[b7])
- ✦ major pentatonic (ma6/9, includes 1, 2, 3, 5 and 6)
- ✦ major pentatonic with optional flat three (m6/9, includes 1, 2, b3, 5 and 6)

General Tips on Bending

bending to the next scale tone

Bends are best on the smallest three strings. To bend the third string, it must be plain, not wrapped. Notes can always be bent up to the next scale tone when it is a whole step (two fret interval). Minor third bends (a three fret interval) are more difficult and should not be performed with the index finger.

Minor thirds can produce crying sounds, since more extreme emotions are usually evoked with a wide range of pitch. The best minor third bends are “1” to “b3” and “5” to “b7”. “3” to “5” is often good. “6” to “1” is a bit more difficult to fit melodically, and was used by Dickie Betts and Duane Allman in the Allman Brothers Band.

microtonal bends

Microtonal bends are performed on b3, b5 and b7 to suggest the major versions of the same tones by bending about halfway there. This means the pitch is in-between that of two consecutive frets (in-between a half step). They should not bend over 75% to the note, since it would then sound like the note is being erroneously played flat. Microtonal bends are played primarily with a linear bend, but can use a “quick start” or “slow start”.

on these diagrams, time is horizontal and pitch is vertical

Blue Notes

flatted versions of odd numbers

To darken or “bluesify” a melody, we flat odd-numbered tones. These are called “blue notes”. The same term has been applied to microtonal bends, but for the sake of clarity, I try to reserve the term blue note to chromatically lowered notes, not microtonal bends.

minor pentatonic with flat five

Consistently flattening the fifth in a minor pentatonic scale can create a new scale, minor 7/11 flat five. Similarly, consistently flattening the third in a major pentatonic scale can create minor 6/9 pentatonic scale. These two scales are relative in the same way major and minor pentatonic are relative. Notice the commonality of this use of pentatonic fingering 1, based on the relative C major pentatonic and A minor pentatonic.

Minor Pentatonic Scale (m7/11)

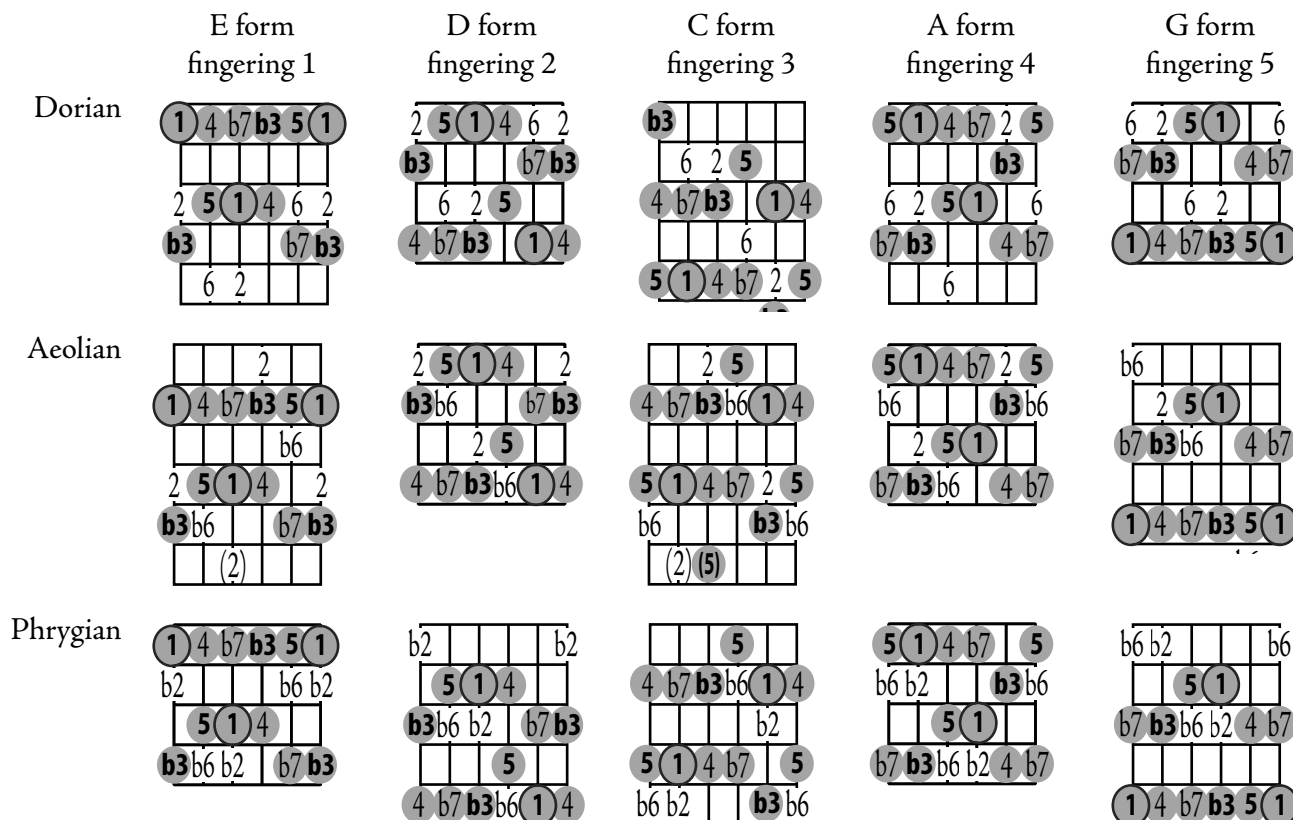

minor 7/11 synonyms and chord sound

I specify minor pentatonic with the chord-style name “minor 7/11 pentatonic scale”. In a major scale named after the key it has tones 1, b3, 4, 5 and b7. Minor 7/11 pentatonic makes a key scale minor seventh chord sound, since contains the notes of a minor seventh chord. The grey-backed notes below are minor seventh chord tones. Adding a fourth (“4”) to a minor seventh arpeggio produces a minor 7/11 pentatonic scale.

minor 7/11 subsets of heptatonic (7 tone) scales

Minor pentatonic is a subset of Dorian mode (major mode II), Phrygian (major mode III), and Aeolian (major mode V). See [Modes of Four Heptatonic Scales](#).

melodic characteristics of individual notes

This is the best pentatonic scale for bending. Each scale tone can be bent up to the next scale tone. Minor third (three-fret) bends should not be performed with the index finger alone. Apply a microtonal bend to the b3 (produce a slight, gradual upward bend). Apply microtonal bend to b7.

Chromatics are best between 4 and 5, also good between b7 and 1. “b7” functions as a lower neighbor to “1”. Chromatics are shown below between four and five.

“b3” functions as a upper neighbor to “1”. Add “2” where it is a chord tone, such as on a Im9 or on a V chord (the V chord is constructed with key scale tones 5, 7 and 2).

Slow Ride style minor 7/11 pentatonic solo example solo rhythm track

Slow Ride style comping

The musical score is divided into four systems, each with a treble clef staff and a tablature staff. The key signature is B minor (two sharps). The solo is in 4/4 time. The first system has 8 bars, the second 8 bars, the third 8 bars, and the fourth 8 bars. The solo is composed of eighth and quarter notes, with some triplets and a 'trip let' marking. The tablature shows fret numbers and fingerings. The solo is in B minor 7/11 pentatonic style, which is a subset of the B Aeolian scale.

scales used:

bars

Bm7/11 IX
subset of B Aeolian

The second note "C#" is an added tone from B Aeolian (D major parent scale). It also occurs at the end of bar eight.

House Of The Rising Sun minor 7/11 pentatonic [click to play solo](#)

The solo is written in 12/8 time and consists of six systems of music. Each system includes a treble clef staff with notes and accidentals, and a tablature staff with fret numbers and techniques like bends and slides. Chords (Am, C, D, F, E) are indicated above the staff. The solo features various techniques including triplets, full bends, and slides.

System 1: Am C D F Am E Am E. Tablature includes triplets and bends.

System 2: Am C D F Am C E. Tablature includes triplets and bends.

System 3: Am C D F Am E Am C. Tablature includes triplets and bends.

System 4: D F Am E Am E. Tablature includes triplets and bends.

System 5: Am C D F Am C E. Tablature includes triplets and bends.

System 6: Am C D F Am E Am E. Tablature includes triplets and bends.

Beverly Hills style minor 7/11 pentatonic solo example solo rhythm track

Beverly Hills style comping

scales used: F minor pentatonic, E form (fingering 1).

The musical score is presented in four systems, each containing a treble clef staff, a bass clef staff, and a tablature staff. The key signature is one flat (Bb), and the time signature is 4/4. The solo is in F minor pentatonic, and the comping is in E form (fingering 1).

System 1 (Measures 1-4): Chords: F5, Bb5, F5, Bb5. The solo starts with a 1/4 note on the 9th fret, followed by a triplet of 10, 8, 10, and then a 6th fret note. The rhythm track includes a 1/4 note and a full note.

System 2 (Measures 5-8): Chords: F5, Bb5, C5, E5. The solo continues with a triplet of 10, 8, 10, and then a 6th fret note. The rhythm track includes a 1/4 note and a full note.

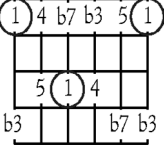

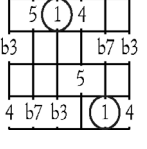

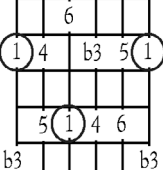

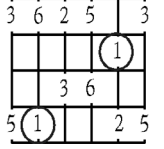

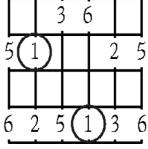

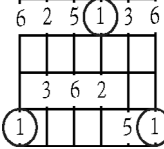

System 3 (Measures 9-12): Chords: F5, Bb5, F5, Bb5. The solo continues with a triplet of 10, 8, 10, and then a 6th fret note. The rhythm track includes a 1/4 note and a full note.

System 4 (Measures 13-16): Chords: F5, Bb5, C5, E5. The solo continues with a triplet of 10, 8, 10, and then a 6th fret note. The rhythm track includes a 1/4 note and a full note.

bar 12 uses F super Locrian scale

The musical score is written in B-flat major (two flats) and consists of 15 measures. It is divided into four systems. Each system has a treble clef staff with notes and accidentals, and a bass staff with fret numbers. Chord changes are indicated above the staff: Bbm (bars 1-2), Gbm (bars 3-4), Ebm (bars 5-6), Bm (bars 7-8), and Am (bars 9-10). The notation includes various musical symbols such as slurs, ties, and dynamic markings like 'full' and '1/2'.

Nate's Blues solo example

The musical score is for a guitar solo in 4/4 time, key of E major. It consists of six systems, each with a treble clef staff and a two-part guitar tablature (T and B). Chords E, A, and B7 are indicated above the staff. The solo features various techniques including triplets, bends, and slides, with specific fret numbers and string numbers provided in the tablature.

System 1: Treble clef staff with a key signature of one sharp (F#). Chords E and A are indicated. The solo begins with a quarter rest, followed by a quarter note E4, a quarter note F#4, and a quarter note G4. The tablature shows a sequence of notes: 2/4 2 0, 2, 2 2 2, 2 0 2, 2 2 0 2, 2 4 2 0, 2, 2 2 2, 2 2 0 2, 2 2 0 2, 0 3 0, 2 2 0 2, 0 3 0.

System 2: Treble clef staff. Chords A and E are indicated. The solo continues with a quarter note A4, a quarter note B4, a quarter note C#4, and a quarter note D4. The tablature shows: 2 2 0 2, 2 0, 2 2 0 2, 2 2 2 4 2 0, 2, 2 2 0 2, 0 3 0, 2 2 0 2, 0 3 0.

System 3: Treble clef staff. Chords B7, A, and E are indicated. The solo continues with a quarter note E4, a quarter note F#4, a quarter note G4, and a quarter note A4. The tablature shows: 2 4 4 3 4 5 3 4, 2 0 2 2 4 2 0, 2, 2 2 0 2, 2 2 0 2, 2 2 0 2, 2 2 0 2.

System 4: Treble clef staff. Chords E and A are indicated. The solo continues with a quarter note B4, a quarter note C#4, a quarter note D4, and a quarter note E4. The tablature shows: 3 5 3 5 3 4 0 2, 2 0 2 3 0 2 0, 2, 2 2 0 2, 0 3 0, 0 2 0 2 2 2 4 3 5.

System 5: Treble clef staff. Chords A and E are indicated. The solo continues with a quarter note F#4, a quarter note G4, a quarter note A4, and a quarter note B4. The tablature shows: 5 3 5 5 7 3 5 3 4 3 5, 2 2 4 0 2 0 2 2, 2 2 0 2, 2 2 0 2, 2 2 0 2, 3 0 1 2 0 0.

System 6: Treble clef staff. Chords B7, A, and E are indicated. The solo continues with a quarter note C#4, a quarter note D4, a quarter note E4, and a quarter note F#4. The tablature shows: 2 2 0 2 2 2 4 3 4 2 0 2, 2 0 2 2 4 2 0, 2, 2 2 0 2, 0 3 0, 2 2 0 2.

Minor Pentatonic 5 b7 and Pedal Tone Blues Solo Example

The image shows a guitar solo in E major, using the minor pentatonic scale (E, G, A, B, D) with a 5th and b7th (B and D). The solo is divided into measures 3, 5, 7, 9, and 11. The notation includes a treble clef staff with notes and a tablature staff with fret numbers. Chords A7, D7, and E7 are indicated above the staff. Fingerings and techniques like triplets, bends, and slides are marked throughout.

Measure 3: A7. Notes: E4, G4, A4, B4, A4, G4, F#4, E4. Fingering: 3, 2, 3, 2, 3, 3, 1, 1, 3. Techniques: triplet (3), 1/4 bend (1/4).

Measure 5: A7. Notes: E4, G4, A4, B4, A4, G4, F#4, E4. Fingering: 3, 1, 3, 1, 1, 3, 1, 3, 1, 3, 1, 3. Techniques: triplet (3), 1/4 bend (1/4), full bend (full), triplet (3 full), full bend (full).

Measure 7: D7. Notes: E4, G4, A4, B4, A4, G4, F#4, E4. Fingering: 3, full, 4, 3, full, 4, 4, 1, 3, 1. Techniques: triplet (3 full), full bend (full), triplet (3 full), full bend (full).

Measure 9: E7. Notes: E4, G4, A4, B4, A4, G4, F#4, E4. Fingering: 2, 1, 3, 1, 2, 1, 3, 1, 2, 1, 3. Techniques: triplet (3), 1/2 bend (1/2), full bend (full).

Measure 11: A7. Notes: E4, G4, A4, B4, A4, G4, F#4, E4. Fingering: 3, 1, 1, 3, 1, 1, 1, 3, full, 1, 2, 3, 2, 1, 1, 2, 1, 1, 3, 1, 2, 2. Techniques: triplet (3), full bend (full), triplet (3 full), full bend (full).

Minor Pentatonic with Major Third Option: Dominant 7/11 Pentatonic Scale

dominant 7/11 synonyms and chord sound

When a minor pentatonic scale is used with a major third (natural three), I give it the chord-style name “dominant 7/11 pentatonic scale”. In a major scale named after the key it has tones 1, 3, 4, 5 and b7. Dominant 7/11 pentatonic makes a key scale dominant seventh chord sound (such as C7), since it contains the notes of a dominant seventh chord. The grey-backed notes below are dominant seventh chord tones. Adding a fourth (“4”) to a minor seventh arpeggio produces a dominant 7/11 pentatonic scale.

dominant 7/11 subsets of heptatonic (7 tone) scales

When minor pentatonic has a major third (natural three), it is a subset of Mixolydian (major mode V, key scale b7), Phrygian major (major mode III) and Lydian dominant (melodic minor mode IV). See [Modes of Four Heptatonic Scales](#).

Lydian dominant

melodic characteristics of individual notes

Avoid overuse of the “3” without darkening it with “b3” or playing it briefly. Too much use of “3” (the major third) can make the melody too sweet. Slur into the “3” from “#2”. Preceding “3” with a “#2” of short duration sounds more modern than using a “#2” of long duration. Long duration “#2” before “3” sounds like ragtime or old blues. When you play “3” and “b3” repeatedly next to each other, you should usually end on “3”.

Apply a microtonal bend to b7 (produce a very slight, gradual upward bend).

Chromatics are best between 4 and 5, also good between “b7” and “1”.

“b7” is a lower neighbor to “1”, but “3” does not function well as an upper neighbor to “1”. The practical interval limit for upper and lower neighbors is a minor third. Add “2” where it is a chord tone, such as on a Im9 or a V chord (the V chord is constructed with key scale tones 5, 7 and 2).

Notice the dissonant interval sound from “3” to “b7”.

This is a good scale for bending. All notes can be bent up to the next scale tone, but bending “1” to “3” is an extreme four fret bend.

I IV V Blues Minor Pentatonic With Optional Major Third, Example 2 solo

Swing Eighths

The musical score is written for guitar and includes a bass line. The key signature has one flat (Bb). The melody is in the treble clef, and the bass line is in the bass clef. The score is divided into three systems. The first system has four measures, the second has four measures, and the third has four measures. Chords are indicated above the staff: C7, F7, and G7. The bass line includes fret numbers and techniques like 'full' and '1/4'.

System 1:

- Measure 1: Treble clef has eighth notes G4, A4, Bb4, C5. Bass line has frets 8, 10, 10. Technique: full.
- Measure 2: Treble clef has eighth notes D5, E5, F5, G5. Bass line has frets 11, 8, 11, 8, 11. Technique: 3.
- Measure 3: Treble clef has eighth notes G5, F5, E5, D5. Bass line has frets 8, 9, 10, 8, 10, 10. Technique: 3.
- Measure 4: Treble clef has eighth notes C5, Bb4, A4, G4. Bass line has frets 8, 11, 8, 11, 8, 8. Technique: 3.

System 2:

- Measure 5: Treble clef has eighth notes F4, G4, A4, Bb4. Bass line has frets 8, 11, 8, 11, 8, 8. Technique: 3.
- Measure 6: Treble clef has eighth notes C5, D5, E5, F5. Bass line has frets 8, 10, 10, 8, 10, 10. Technique: full.
- Measure 7: Treble clef has eighth notes G5, F5, E5, D5. Bass line has frets 10, 8, 10, 8, 10, 10. Technique: 1/4, full.
- Measure 8: Treble clef has eighth notes C5, Bb4, A4, G4. Bass line has frets 8, 11, 8, 8, 11, 8. Technique: 3.

System 3:

- Measure 9: Treble clef has eighth notes F4, G4, A4, Bb4. Bass line has frets 10, 12, 11, 8, 10, 8, 10. Technique: full.
- Measure 10: Treble clef has eighth notes C5, D5, E5, F5. Bass line has frets 10, 8, 10, 10, 10, 10. Technique: full.
- Measure 11: Treble clef has eighth notes G5, F5, E5, D5. Bass line has frets 8, 10, 10, 10, 10, 8. Technique: full.
- Measure 12: Treble clef has eighth notes C5, Bb4, A4, G4. Bass line has frets 10, 10, 10, 10, 10, 10. Technique: 1/4.

Key to the Highway style solos with minor pentatonic and optional major third solo

Swing Eighths

First Solo (Measures 1-4):

Chords: A⁷, E⁷, D⁷

Notes: #2 3 5 #2 3 1 1 | 4 5 4 b3 1 | b3 5 5 | 4 5 b7 1 | 1 5 b3 1 1 | 4 5 4 5 5 | 4 b3 1 1 b3 5 5

Annotations:

- I major triad with lower chromatics to 3
- Darkening with I minor triad with neighbor & passing tone 4. "b3" (C) makes E augmented and is a blue note for the key.
- 5 & b7 suggest I⁷ (A⁷) to IV⁷ (D⁷)
- I minor triad (with neighbor tone 4) is part of the IV⁹ (D⁹) chord

Second Solo (Measures 5-8):

Chords: A⁷, E⁷, A, A⁷, A^{o7}, Bm⁷(b5), A⁷, E⁷

Notes: #2 3 1 b7 5 b7 1 1 | b7 5 4 5 4 b3 4 5 | #2 3 1 4 #2 3 | 1 5 b7 1 | b5 6 1 4 b6 2 | #2 3 1 b7 5 5

Annotations:

- I⁷ (A⁷) chord tones, made colorful with bends
- E⁷ is 5724 of A, so 4 & 5 are part of E⁷. b3 (C) makes E sound augmented and makes the key bluesy.
- Anticipates the I(A) triad. "4" is an upper neighbor to "3"
- Each triplet is tones of the current chord.
- I⁷ (A⁷) chord tones, leading down to "5" with microtonal b7. Common to Albert King style, usually an octave lower.

Third Solo (Measures 9-12):

Chords: A⁷, E⁷, D⁷

Notes: #2 3 4 #2 3 1 1 | b7 5 4 b3 1 | 5 4 b3 5 5 | 4 5 b7 5 | b3 1 1 4 b3 1 b7

Annotations:

- I minor triad with neighbor tone 4
- D⁷ is 5724 of A, so 4 & 5 are part of D⁷. b3 (C) makes E sound augmented and makes the key bluesy, especially with the b3 microtonal bend.
- 5 & b7 suggest I⁷ (A⁷) to IV⁷ (D⁷)
- I minor triad (with neighbor tone 4) is part of the IV⁹ (D⁹) chord

Tablature (T, A, B strings):

First Solo: 5 6 5 6 7 | 7 (7) 5 7 | 5 7 | 7 9 8 | 10 10 9 | 10 10 | 10 10 | 10 10 | 10 10 | 10 10 | 8 5 5

Major Pentatonic (Ma6/9) Scale

major 6/9 synonyms and chord sound

I specify major pentatonic with the chord-style name “major 6/9 pentatonic scale”. In a major scale named after the key it has tones 1, 2, 3, 5 and 6. Major 6/9 pentatonic scale makes a key scale major sixth chord sound, since contains the notes of a major sixth chord (such as C6). The grey-backed notes below are major sixth chord tones. Adding a second (“2”) to a major sixth arpeggio produces a major 6/9 pentatonic scale.

major 6/9 subsets of heptatonic (7 tone) scales

Major 6/9 is a subset of major (Ionian or major mode I), Lydian (major mode IV), Mixolydian (major mode V) and Lydian dominant (melodic minor mode IV). See [Modes of Four Heptatonic Scales](#).

Lydian

Lydian dominant

melodic characteristics of individual notes

Bending is a little limited with this scale. It is not typical to bend in traditional Swing music. The most common bend in major pentatonic is “2” to “3”. Bending “5” to “6” is good where “6” is a chord tone (or implied chord tone). If “6” is not a chord tone, release to “5” after bending to “6”. By using the commonly added scale tone “4”, “4” can be bend to “5”. Bending “1” to “2” is good where “2” is a chord

tone. Bending “6” up to “1” or “3” up to “5” are rare.

“6” is a lower neighbor to “1”. Add “4” as a neighboring and passing tone. Avoid overuse of the 3 without darkening it with “b3” or playing it briefly. Slur into the “3” from “#2”. Preceding “3” with a #2 of short duration sounds more modern than using a #2 of long duration.

In early blues and ragtime music from about 1900 to 1920, sharp two was commonly played before three with equal duration. By about 1940, it became unfashionable to play a long duration of sharp two before three. Sharp two is now commonly played with a short duration before three, often just a grace note.

When you play “3” and “b3” (#2) repeatedly next to each other in a phrase, the melodic convention is to end on natural three, the “happy note”. There are exceptions, such as Paul McCartney’s outro solo on “Ticket To Ride”.

End phrases on “2” or “6” when they are pleasing chord tones.

Key to the Highway style solos with major pentatonic and optional flatted third solo

♩ = 95

Swing Eighths

System 1 (Measures 1-4):

- Measure 1: $I(A)6$ chord tones (5 6 1 1 6)
- Measure 2: $I(A)m6/9$ (A maj. pent. with $b3$). Darkening $A6$ with $b3$. (2 $b3$ 2 1 6 1 6)
- Measure 3: $V6/9$ is 56723. This adds bright colors to 5 with its "2" (6 of key) and its "6" (3 of key). (5 3 6 3 5 5)
- Measure 4: $I(A)m6/11$ has all five tones of $D9$ and is 1 $b3$ 4 5 6 of the key. (5 6 1 1 6 1 5 6 1 5)

System 2 (Measures 5-8):

- Measure 5: $I(A)m6/11$ has all five tones of $D9$ and is 1 $b3$ 4 5 6 of the key. (4 $b3$ 1 6 1 2)
- Measure 6: $I(A)$ chord tones (2 3 5)
- Measure 7: $I(A)m6/9$ (A maj. pent. with $b3$), especially emphasizing $b3$, 1 and 6. $b3$ makes it bluesy. "6" is the classic swing tone, making it sound jazzy. (2 $b3$ 2 1 6 1 6 1 5 6 5)
- Measure 8: $I(A)$ chord tones (2 2 1 3 $1/2$ 1 3 1 3 1 1 3 1)

System 3 (Measures 9-12):

- Measure 9: $V6$ is 5723. This adds the bright colors "6" (3 of key) and its "6" (3 of key). (5 2 3 5 2)
- Measure 10: $I(A)$ chord tones. Anticipates the I chord. (1 2 3 1)
- Measure 11: $I(A)6$ chord tones (1 2 3 5 6)
- Measure 12: $I(A)^{\circ}7$ chord tones (1 6 1 2)
- Measure 13: $I(A)m6/9$ (A maj. pent. with $b3$) anticipates the $A7$ ($b3$ 2 1 6 1 2)
- Measure 14: $I(A)$ chord tones (3 5)

System 1:

Section 2: I(A)m6/9(A maj. pent. with b3)

System 2:

Chords: A7, E7, A, A7, A7, Bm7(b5), A7, E7

Section 1: I(A)m7/11 (A minor pent.)

Major Pentatonic with Optional Flat Three (Minor Six Nine)

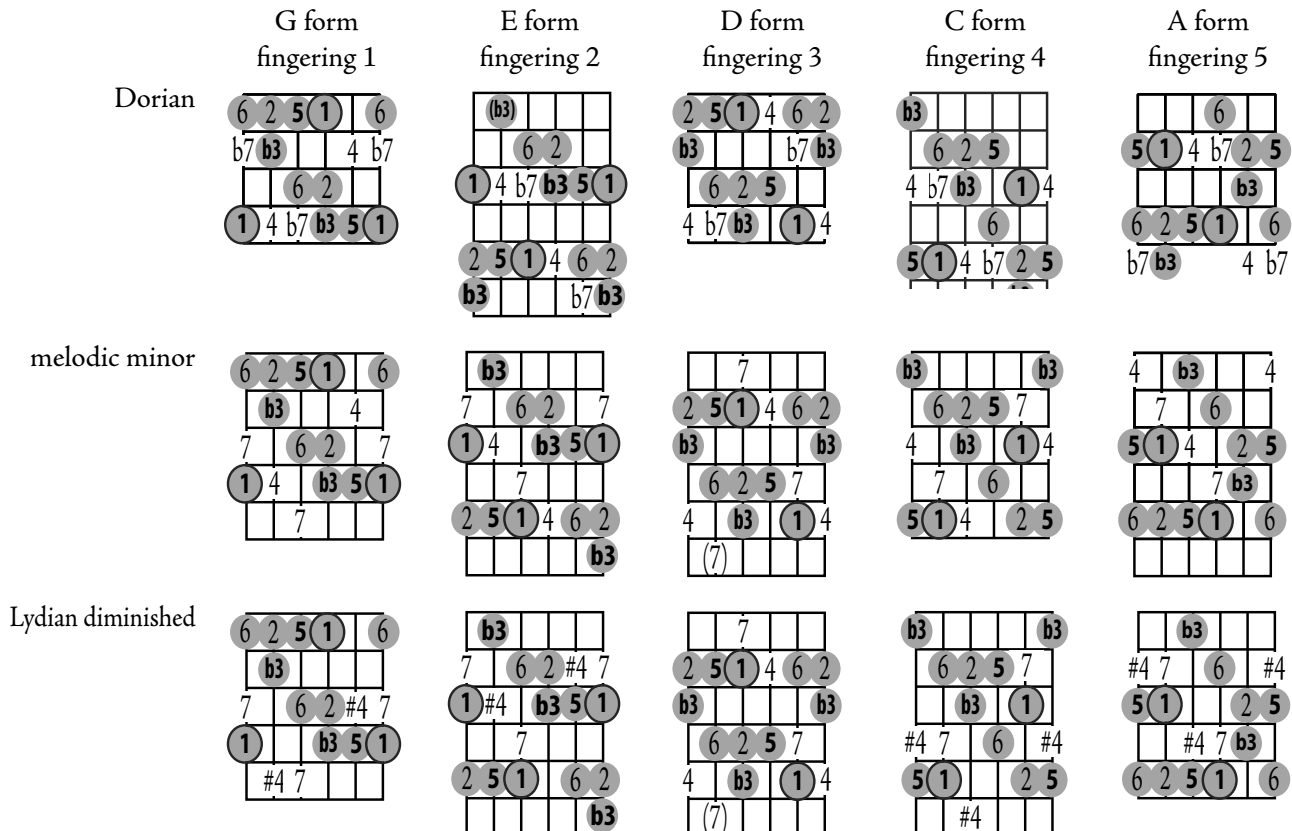

minor 6/9 synonyms and chord sound

When major pentatonic has a flatted third (b3), I use the chord-style name “minor 6/9 pentatonic scale”. In a major scale named after the key it has tones 1, 2, b3, 5 and 6. Minor 6/9 pentatonic scale makes a key scale minor sixth chord sound, since contains the notes of a major sixth chord (such as Cm6). The grey-backed notes below are minor sixth chord tones. Adding a second (“2”) to a minor sixth arpeggio produces a minor 6/9 pentatonic scale.

minor 6/9 subsets of heptatonic (7 tone) scales

Minor 6/9 is a subset of Dorian (major mode II), melodic minor (major flat three) and Lydian diminished (Lydian flat three or major flat six mode IV). See [Modes of Four Heptatonic Scales](#).

melodic characteristics of individual notes

Optionally apply a microtonal bend to the b3 (produce a slight, gradual upward bend). Bending is a little limited with this scale. It is not typical to bend in traditional Swing music. The best bends are “2” to “b3” and “4” to “5” (“4” is an added tone). Bending “1” to “b3” is good for a “crying” sound. Bending “1” to “2” is good where “2” is a chord tone. Bending “5” to “6” is good where “6” is a chord tone. Remember to not bend three or four-fret bends with the index finger.

Use “6” as a lower neighbor to “1”.

Use minor 6/9 pentatonic for chords that have the “b3”, or where the chord has “3”, but you are using “b3” as a blue note. Practice playing phrases that combine sub phrases with “3” and sub phrases with “b3”.

Add “4” as a neighboring and passing tone. End phrases on “2” or “6” when they are pleasing chord tones.

Minor Pentatonic with Flat Five (m7/11b5)

minor 7/11b5 synonyms and chord sound

I specify minor pentatonic with the chord-style name “minor 7/11b5 pentatonic scale”. In a major scale named after the key it has tones 1, b3, 4, b5 and b7. Minor 7/11b5 pentatonic makes a key scale minor seventh flat five chord sound, since contains the notes of a minor seventh flat five chord (also called “half-diminished”). The grey-backed notes below are minor seventh flat five chord tones. Adding a fourth (“4”) to a minor seventh arpeggio produces a minor 7/11b5 pentatonic scale.

minor 7/11b5 subsets of heptatonic (7 tone) scales

Minor 7/11b5 is a subset of Locrian (major mode VII), Dorian flat five (major flat six mode II) and Aeolian flat five (melodic minor mode VI). See [Modes of Four Heptatonic Scales](#).

Aeolian flat five

Dorian flat five

melodic characteristics of individual notes

This is a good scale for bending. All notes can be bent up to the next scale tone, but bending “b5” to “b7” is an extreme four fret bend. Apply a microtonal bend to b3 (produce a slight, gradual upward bend). Slight blue notes b5 or b7. Remember to not bend three or four-fret bends with the index finger.

Chromatics are good between b7 and 1.

“b5” works great during the later part of the IV7 chord, suggesting IV7b9 or #IVdim7. It also works well during the I7 chord, if you want the darkest mood. “b7” functions as a lower neighbor to “1”. “b3” functions as an upper neighbor to “1”. Add “2” where it is a chord tone, such as on a Im9 or on a V chord (the V chord is constructed with key scale tones 5, 7 and 2).

Surfing with the Alien style minor 7/11 b5 example solo

The musical score is written for guitar in 4/4 time, featuring a key signature of one sharp (F#) and a key signature change to one flat (Bb) at measure 5. The score is divided into four systems, each with a guitar staff and a tablature staff.

System 1 (Measures 1-4): The guitar staff shows chords G, C, C, and G. The tablature includes fingerings such as 10-12, 11, 10, 9, 8, 6, 8, 8, 6, 6, 5, 3, 5, 5, 6, 5, 3, 5, 5, 8, 6.

System 2 (Measures 5-8): The guitar staff shows chords G, C, C, and G. The tablature includes fingerings such as 9, 6, 8, 6, 6, 8, 7, 6, 6, 6, 5, 8, 5, 5, 6, 5, 0, 3, 5, 3, 0, 5, 6, 3, 6, (6), 5, (5), 3, 4, 3, 6, 3.

System 3 (Measures 9-12): The guitar staff shows chords Em7 and C7. The tablature includes fingerings such as 15, 12, 12, 15, 17, 15, 17, 17, (17), 19, 18, 17, 18, 17, 15, 17, 15, 14, 17, 15.

System 4 (Measures 13-16): The guitar staff shows chords G and D. The tablature includes fingerings such as 13, 15, 15, 13, 12, 11, 13, 13, 13, 11, 13, 15, 13, 15, 13, 15.

Minor Pentatonic with Six Instead of Flat Seven (m6/11)

minor 6/11 synonyms and chord sound

When a minor pentatonic scale is used with six instead of flat seven, I give it the chord-style name “minor 6/11 pentatonic scale”. In a major scale named after the key it has tones 1, 2, b3, 5 and 6. Minor 6/11 pentatonic makes a key scale minor sixth chord sound (such as Cm6), since it contains the notes of a minor sixth chord. The grey-backed notes below are minor sixth chord tones. Adding a fourth (“4”) to a minor seventh arpeggio produces a minor 6/11 pentatonic scale.

Im6/11 = IV9. Playing a key scale Im6/11, like Gm6/11 in the key of G produces the same notes as a IV9 chord, which is C9 in the key of G.

minor 6/11 subsets of heptatonic (7 tone) scales

Minor 6/11 is a subset of Dorian (major mode II), Dorian flat two (melodic minor mode II) and melodic minor (major flat three). See [Modes of Four Heptatonic Scales](#).

melodic minor

melodic characteristics of individual notes

Apply a microtonal bend to the b3 (produce a slight, gradual upward bend). Apply a microtonal bend to the b7. This is a good scale for bending. All notes can be bent up to the next scale tone, but bending “6” to “1” is rare. Remember to not bend three or four-fret bends with the index finger.

Chromatics are best between 4 and 5, also good between b7 and 1.

“b7” functions as a lower neighbor to “1”. “b3” functions as an upper neighbor to “1”. Add “2” where it is a chord tone, such as on a Im9 or on a V chord (the V chord is constructed with key scale tones 5, 7 and 2). Tend to descend to the “6”, rather than all the way down to the “4”. Notice the dissonant interval from “b3” to “6” (typical of fifties swing-rock or rockabilly).

Diminished Seven Add Four Pentatonic (Diminished 7/11)

diminished 7/11 synonyms and chord sound

It is unfortunate that the naming convention for diminished seventh has not been updated. It would be more understandable as minor sixth flat five. The chord name “diminished seventh” was coined previous to the use of sixth chords, and was an attempt to name a four note chord in the traditional manner as a seventh. In doing so, the sixth has been called a “double-flat” seventh. So, the formula for a diminished seventh is 1-b3-5-bb7 (double-flat seven = 6).

When a minor pentatonic scale is used with six instead of flat seven and with a flat five, I give it the chord-style name “minor 6/11b5 pentatonic scale”. In a major scale named after the key it has tones 1, 2, b3, b5 and 6. Minor 6/11 pentatonic makes a key scale diminished seventh chord sound (such as C diminished seventh or C°7), since it contains the notes of a diminished seventh chord. The grey-backed notes below are diminished seventh chord tones. Adding a fourth (“4”) to a diminished seventh arpeggio produces a diminished 7/11 pentatonic scale.

diminished 7/11 subsets of heptatonic (7 tone) scales

Diminished Seven Eleven is a subset of Locrian natural six (major sharp five mode VII) and Dorian flat five (major flat six mode II). See [Modes of Four Heptatonic Scales](#).

Dorian flat five

melodic characteristics of individual notes

Apply a microtonal bend to the b3 (produce a slight, gradual upward bend). Apply a microtonal bend to the b5 and b7. This is a good scale for bending. All notes can be bent up to the next scale tone. Remember to not bend three or four-fret bends with the index finger.

“6” functions as a lower neighbor to “1”. “b3” functions as an upper neighbor to “1”. Tend to descend to the “6”, rather than all the way down to the “4”. Notice the dissonant interval from “b3” to “6” (typical of fifties swing-rock or rockabilly).

Descending Diminished Blues solo example solo rhythm track

Swing Eighths

First system of musical notation. Treble clef, E major key signature (three sharps), 12/8 time signature. Chords: E, E^{°7}. A bracket labeled '4' indicates a four-measure phrase. Below the staff is a guitar TAB with fret numbers: 12, 13, 14, 14, 14, 12, 14, 15, 14, 12, 14, 15, 15. Arrows labeled 'full' point to the 14th and 15th frets.

Second system of musical notation. Chords: E, E^{°7}, F[#]m⁷(b⁵), B⁷, E. The melody includes a descending scale marked 'Em⁷/11b⁵ scale'. Annotations include 'slide down to a random point with progressive muting' and 'slide up and down to a random point with progressive muting'. The guitar TAB shows fret numbers: 12, 15, 12, 14, 15, 14, 12, 15, 19, 12, 11.

Third system of musical notation. Chords: E, E^{°7}. The melody includes a descending scale marked 'Em⁷/11b⁵ scale' with a bracket labeled '5'. The guitar TAB shows fret numbers: 12, 10, 12, 12, 12, 10, 12, 10, 12, 12, 2, 11, 9, 11, 9, 11, 12, 9, 11, 10, 11, 10, 9, 10, 12, 9.

Fourth system of musical notation. Chords: E, E^{°7}, F[#]m⁷(b⁵), B⁷, E. The melody includes a descending scale marked 'Em⁷/11b⁵ scale'. Annotations include 'full' and '1/4' with arrows pointing to specific frets. The guitar TAB shows fret numbers: 17, 17, (17), 16, 18, 18, 17, 15, 15, 17.

ADDED TONES

Chromatics

chromatics between 4 and 5 of minor pentatonic

Ascending, this tone would be called sharp four (“#4”). Descending, it would be flat five (“b5”). It is labeled “b5” on the diagrams below. Where “b5” occurs on two adjacent strings, the one on the smaller string should be used in ascending and on the larger string for descending.

chromatics between 2 and 3 of major pentatonic

Ascending, this tone would be called sharp two (“#2”). Descending, it would be flat three (“b3”). It is labeled “b3” on the diagrams below.

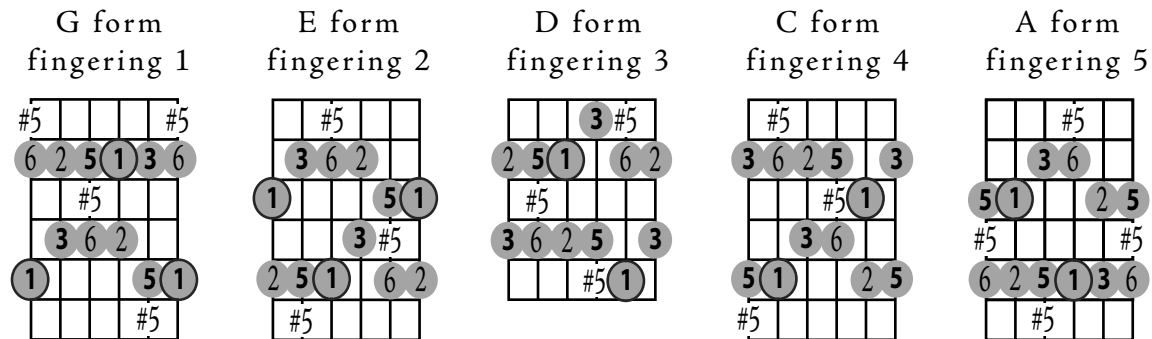

chromatics between both 4 and 5 and between b7 and 1 of minor pentatonic

Where “b5” or “7” occur on two adjacent strings, the one on the smaller string should be used in ascending and on the larger string for descending.

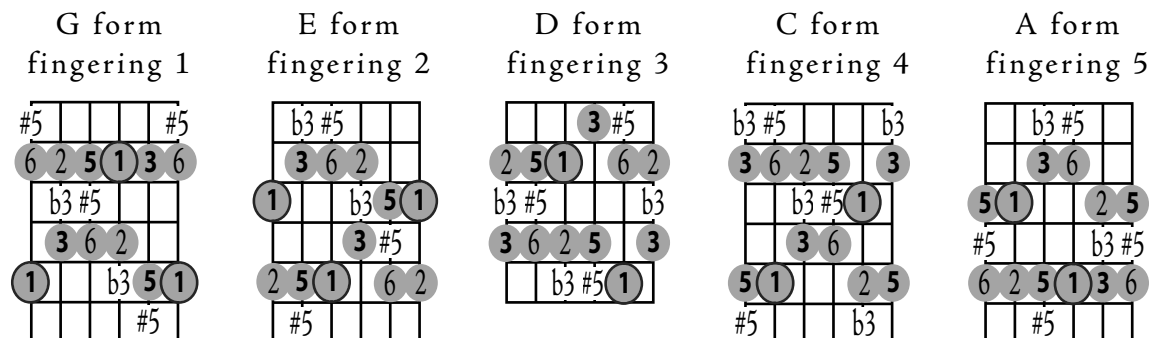

chromatics between 5 and 6 of major pentatonic

Ascending, this tone would be called sharp five (“#5”). Descending, it would be flat six (“b6”). It is labeled “#5” on the diagrams below. Where “#5” occurs on two adjacent strings, the one on the smaller string should be used in ascending and on the larger string for descending.

chromatics between 2 and 3 and between 5 and 6 of major pentatonic

These are labeled “b3” and “#5” on the diagrams below. Where “b3” or “#5” occurs on two adjacent strings, the one on the smaller string should be used in ascending and on the larger string for descending.

Neighboring and Coloring Tones

minor pentatonic adding a ninth (2)

Where “2” occurs on two adjacent strings, the one on the smaller string should be used in ascending and on the larger string for descending. Tend to use “2” in the high octave to suggest a ninth chord, or in any octave as a neighboring tone to “1” (the tone center) or “b3”.

major pentatonic adding a fourth

Tend to use “4” as a neighboring tone, rather than ascending or descending the scale with it.

FREE ASSOCIATION WITH PENTATONIC TONES

Once you have become familiar with the stylistic and emotive effects of each note in all seven of the pentatonic scales covered in this chapter, you can start thinking in terms of each individual note, rather than in scales. See [Emotive Qualities of Chords and Scales](#) for more in-depth study.

Use of 1 and 5

“1” and “5” are common to I7, IV9, so it may be emphasized during either of those chords.

Use of “b3” and “n3” (natural 3: not flatted)

During the I7 chord, “b3” is a blue note, or expressively lowered chord tone. Following b3 with natural 3 or bending b3 to natural 3 produces a commonly blues effect. During the IV7 or IV9 chord, b3 is a chord tone, but n3 clashes. natural 3 can be used during the end of the duration of the IV7 or IV9 chord to anticipate a return to the I7 chord.

Use of 4

During the I7 chord, “4” is a non-chordal tone, so it should be de-emphasized. During the IV7 or IV9 chords, “4” is a chordal tone (the root, in fact), so it should be emphasized. “4” is often added to the major 6/9 pentatonic as a neighboring or passing tone.

Use of b7

During the IV7 or IV9 chords, “b7” is a non-chordal tone, so it should be de-emphasized. During the I7 chord, “b7” is a chordal tone, so it should be emphasized.

Use of b5

During the I7 chord, b5 is a very dark blue note and usually works best with short durations. During the IV7 chord, the b5 suggests a IV7b9 chord or #IVdim7 and is traditionally used toward the end of the duration of the IV7 chord.

Use of 2

During the I7 chord, “2” can be an added ninth chord tone when the accompaniment clearly states a I7 chord. Otherwise, it is a non-chordal neighboring or passing tone. During the IV7 or IV9 chord, “2” can be used in the mid to high range as an added thirteenth.

Occasionally, the “2” is used with the I7 chord to emulate the ninth of the chord. When this is done, the “b7” should be used before or after the “2” to help establish the ordered structure of the ninth chord: 1-3-5-b7-9 (=2).

Use of 6

During the I7 chord, “6” can be used in the mid to high range as an added thirteenth. The key “6” is the third of the IV chord.

Eight Bar Blues 5613 solo example

The musical score is written for guitar and bass. The key signature is D major (two sharps). The time signature is 12/8. The score consists of four systems, each with a guitar staff and a bass staff. Chords are indicated above the guitar staff: D, D7, G7, G#07, B7, Em7, and A7. Fret numbers are written below the bass staff. The score includes various musical notations such as slurs, ties, and triplets.

System 1: Guitar staff starts with a D chord. Bass staff has fret numbers 10, 12, 10, 10, 13, 14, 10, 12, 13, 12, 10, 12, 10, 12. A triplet of 10, 12, 10 is marked.

System 2: Guitar staff starts with a G7 chord. Bass staff has fret numbers 10, 10, 12, 13, 12, 10, 12, 13, 12, 10, 10, 10, 12, 10, 11, 10, 12, 12. A triplet of 10, 12, 10 is marked.

System 3: Guitar staff starts with a D7 chord. Bass staff has fret numbers 10, 10, 10, 12, 12, 10, 10, 9, 12, 12, 11, 10, 12, 14, 15, 14, 15, 17, 15, 14, 15. A 1/4 note is marked.

System 4: Guitar staff starts with a D7 chord. Bass staff has fret numbers 13, 10, 10, 10, 13, 12, 13, 12, (12), 10, 12, 10, 13, 10, 12. A full bar is marked.

GO BY SOUND AND FEELING FIRST

Begin any improvisation with a sense of the mood, genre, and the nature of the rhythm. Learn to choose the scales, chords, melodic figures and rhythms you use as means of expression. If you are thinking and feeling those elements as you learn to use them in the context of what they express, you'll build the ability to choose the appropriate elements for a song. Listen and feel. Develop your aural intuition.

Chords and scales express different emotions. Major chords and scales are happy, minor are sad, diminished are depressed. Suspended chords are heavenly. Augmented chords are tormented. Rhythms can be excited or calm, smooth or punchy.

Determine the feeling of the piece you are going to improvise on. Learn to use major and minor pentatonic scales to express happy and sad moods. Learn to play regular rhythm for calm and offbeat rhythm for provocative/on edge feeling.

rhythmic unity

We must feel the rhythm of other players and sense the regular pulse of the music along with the other musicians and with the listeners. Everybody must be on the "same page" with the beat.

harmonic unity

In general, all the musicians play in the same key at any one time. The chord sounds generally match, though some of the instruments may play darker or brighter colors, such as a soloist playing flatted notes to darkened and bluesify the mood.

Musicians in an ensemble may depict the chord progression differently in progression from one main chord to another, but there is periodic agreement.

choose the scale

For melodic improv, first learn a scale fingering and improvise with it by ear. Learn the location of the chord tones for each chord you are improvising on in simple terms first, such as chord fingerings.

Determine the key. It is named after the major or minor chord that the section you are improvising on should end with, to sound complete. Usually the bass part is a good indicator. Find the note on the sixth or fifth string that sounds like the bass note the piece should end on. That note is the tone center.

Then play major and minor pentatonic with that note on the tone center to determine whether the section is basically minor or major. See [Relative Major and Minor Pentatonic Scale](#), where the tone center is a circled note, a "squared" note or a note shown on the fretboard in a black circle. Make sure you understand that the fingerings are movable and are located by the circle, square or black.

be inventive rhythmically

Strum rhythms made with [four-pulse rhythmic words](#), summarized below. Combine any two of the four-pulse words. Then shorten the strumming stroke progressively, as described below.

Start by moving your hand in the air, in evenly-timed sets of down-up-down-up. The hand should move very regularly like a metronome or pendulum. Speak the selections you intend to make of each set of four. Start by speaking “down-up-down-up”, and “1-2-3-4” alternately. Gradually touch the strings and strum a single chord.

Now repeat the procedure for gallop. Speak the selections you intend to make of each set of four. Start by speaking “down-(miss)-down-up”, and “1-um-3-4” alternately. Gradually touch the strings and strum a single chord. You should be missing the strings on the first “up”, which is “2”.

First strum the rhythm on all six muted strings, or holding a chord, as described above. Next, narrow the strumming stroke length to three strings, then one string for single-note themes.

After picking a single note theme on one string with the same down up directions as when strumming, apply play it to each note of a scale. So, you’re playing each note multiple times, playing the entire rhythmic idea (like two four-pulse rhythmic words) on a single note, then the entire rhythmic idea on the next higher or next lower note in the scale.

Next, play part of the rhythm on one note of the scale, the rest of the rhythm on the next higher or lower note in the scale. Using two four-pulse rhythmic words, you could play one four-pulse word on one note of the scale and the second four-pulse word on the next note in the scale.

Next, play the rhythmic idea (two four-pulse rhythmic words) up and down the scale, with one instance of each note in the scale. Randomize the starting point in the scale. Practice starting by going down and starting by going up the scale.

Start with these sample pairs of four-pulse rhythmic words, then make up your own combinations from “all possible four-pulse rhythmic words” that follow below.

SING PHRASES IN YOUR MIND BEFORE PLAYING

Aural Orientation, Not Mechanical

Singers and horn players (mouthpiece instruments and reed instruments) think in terms of sound, not the mechanical process. Guitar players and keyboard players typically think in terms of graphic patterns on their instruments, which does not make a good connection with the listener.

You should develop a collective imagination between you and your listeners, playing to a large extent what they expect to hear. This must be done aurally, not mechanically. Play phrases that have a relationship to what people know. Make new variations within the range of what the listener will accept.

Train Your Hands to Follow Your Mind's Ear

sing an octave of a scale as you play it

Train your voice to sing each note in tune. It's okay to sing the scale an octave lower if that's more comfortable for you. If you have any doubt that you are singing the notes correctly, sing into a tuner that has a microphone to confirm. If you think you are tone deaf, you probably aren't. You just need training.

One student thought he was tone deaf. I asked to sing any note and retain it. Then I asked him to find that note on the fourth string. He was able to do that. Then I asked him to slide up to the note both with his voice and on the guitar, matching the sound. He was able to do that. Then I had him slide up to a note one fret lower in pitch (toward the head of the guitar), which he did. After a bit of that, he was able to play a pentatonic scale and sing each note. It was a little rough, but he did it. After repeating the process a few times during a week, he was able to sing and play a pentatonic scale.

It is common that someone isn't aware of the octave they are singing in. I suggest to them that they could sing what they play in a low, middle or high octave. They can confirm with a tuner that has a microphone and octave indications that their sung note is in the same octave as the one they are playing on the guitar. A good tuner shows the octave with a number after the letter to indicate the octave. Middle C is the middle note on a piano and is called "C4". Ascending from "C4" up to "B", each letter is followed with "4". Above "C4", the next higher octave in pitch is "C5" through "B5". Likewise, the next lower octave in pitch below "C4" is "C3" through "B3".

predict the notes by gradually muting them on the guitar

Continue to sing up and down the scale, as described above, but gradually stop sounding the notes on the guitar, muting them, then only gesturing them by touching the fretted locations and not actually picking the string.

learn to free associate a small group of notes

Beginning with only three or four consecutive notes in a pentatonic scale, sing each note as you play it. Develop the ability to think the notes in any order before you play them. For example, playing in A minor pentatonic in the fifth position, fingering 1 (see *Locating Pentatonic Scales*), sing and play various orders of “1, b3, 4), which are the notes “A, C and D”. *Be inventive rhythmically*. Repeat a note consecutively. Bounce back and fourth between two notes.

That’s free-associating. Now, expand it gradually to four notes, then five. Progressively grow the ability to free associate the entire position.

QUICKLY RECALLABLE RULES

You’re only going to have a second or two to recall many things you will use in improvising. So you have to already know the subject and be able to express it. You may understand the element, but have you practiced it in many instances, so you can “pull it out of the hat” in a performance?

Use your aural intuition first. Learn concepts about scales, chords and rhythms that you can summarize into a simple rule. So simple that you can play intuitively and recall the rule. This can broaden the possibilities of what you play and introduce more sophisticated elements in your music. To do so, you must know the rule or simple set of rules well enough to it without a lot of conscious thought, giving you the freedom to be expressive.

Rules may be regarding choice of scale, chord progression, rhythm or any element of music. They may state what particular thing to focus on or something to avoid, so it may tell you what to include or what to exclude (or both). It needs to be simple and easy to recall. Some examples follow (“listen for chord tones”, “use a rhythmic theme”).

listen for chord tones

When a note seems to harmonize with the current chord, sustain it, repeat it, end the phrase with it. Emphasize it in some manner. Using pentatonic scales, one of the two notes on each string will usually harmonize with the current chord. It may be a note in the chord or a pleasing added harmony. You will increase this ability when you learn graphically where the chord tones are and which of them are in the scale, but you can sense that by ear now. You should always use your ear (your aural sense) first, then elaborate it with your intellect.

change the rhythmic level, leave “breaths”

Especially leave “breaths” at the end of your phrases with a sustained note or silence (rest), to separate the phrase from the next. This can also be done with a device like ending your phrase with something

that sounds like a different instrumental part, with muted notes, notes in a higher or lower octave, or notes at a different rhythmic level (see below).

More often, you should vary the rhythmic level, playing some parts of phrases (or some phrases) with fast notes, some with long notes. For example, base your melody on eighth notes, two notes per beat. End your phrases with sixteenth notes (four per beat) or half notes (one note every two beats) to add diversity.

make patterns with phrase start points

Phrases are typically two bars long. They end with a period of sustain, silence, or some kind of de-emphasis. Phrases can start on the first beat, before the first beat (on the “and” of “4” in 4/4 on “4”, or earlier in the bar before the first beat), or after the first beat (on the “and” of “1”, on “2”, etc.).

Usually you should not start all your phrases in the same part of the bar. It is more interesting when there are patterns to the phrase start points. For example, an eight-bar section, containing four two-bar phrases could be patterned “before, on, before, on” in regard to phrasing.

Before The Chord Begins. Cadences or stepwise superimposed chords can suggest a succession of chords which predict the next chord. The next chord can also be previewed by playing its arpeggio and supporting scale immediately before the chord actually occurs.

At The Beginning Of The Chord. Phrases starting at the beginning of the chord are very obvious and can be boring. Be careful not to overuse them.

After The Beginning Of The Chord. Similar to using all phrases starting at the beginning of the chord, using all phrases starting after the beginning of the chord can be boring. Variety and patterning is preferred, such as a four-phrase section with the first three phrases each starting on the first beat and the last one of the section starting after the first beat to signify the end of the section. Phrases starting after the first beat allow you hear the chord being established by the accompaniment, followed by a melodic response to it.

Overlapping Phrases. Often what seem initially to be a long phrase turns out to be two phrases with connecting material. The sub phrase of a few notes that rhythmically and harmonically resolves the first phrase also serves as the beginning of the next phrase.

vary rhythms in your melody

In creating comping rhythms, you can use five elements to [vary rhythms](#) to create a seemingly infinite library of rhythms: push, pickup, add a note on an empty beat, replace a quarter with a pair of eighths and consecutive syncopations. With the standard downstroke on the beat, consecutive syncopations are consecutive upstrokes. Those same elements can be applied to single-note improvisation.

flat the third in a major key for blues

In a major key blues, like a I IV V (C F G) blues in C, you can take the option of flattening the third (change “E” to “Eb” in the key of C) at any time. It’s almost mandatory that you flat the third if the chord has a flattened third, though there are exceptions.

In his uncanny manner, Charlie Parker, bebop alto saxophonist would often play a major melody with a natural three (“E” in the key of C) when the accompaniment was playing a flat three. Then, the effect is that the *accompaniment* is playing darkened tones, with the flat three. Similarly, Charlie would play harmonic minor with a natural seven when the chord had a flat seven.

flat the third on a IV chord in blues

In blues improv, you should generally flat the third of the key when making melody on a IV7 chord, since it is constructed with 4-6-1-b3 of the key. So, in the key of C, you should flat the third (change “E” to “Eb”) during the IV chord, which is “F”. The IV chord (F in the key of C) may only be major in the accompaniment, but you can suggest it is a IV7 chord (F7 in the key of C).

INTEGRATING PITCH AND TIME

Integral Improv

Integral improv is intended to isolate and master each of the elements of pitch and rhythm, so they can be used intuitively and not interrupt our expression.

Pitch Elements

note sets

Collections of two to twelve different notes are *note sets*. Pairs of different notes are called *intervals*. Groups of three or more different notes played at once are called *chords*. Chords tend to use notes of intervals of a minor third (three semi-tones, half steps or frets) or larger. Most note sets encompass an interval of an octave or less, but larger intervals and larger chords span more than an octave.

Examples of combinations of pentatonic scales, arpeggios and seven-tone (heptatonic) scales are shown in [Level 2 Improv: Pentatonics and Modes](#).

musical structures and design

Note sets are conceived in simple repeating patterns. When note sets have irregular and abstract patterns, they fall into the design category.

The consecutive order of note sets of primarily half and whole steps makeup scales. Consecutive order of note sets primarily in thirds makeup arpeggios. Major thirds are equivalent to the interval from the first to third step of a major scale, which is two whole steps, four frets or two whole tones (all equivalent). Minor thirds are a half step smaller, which is one and a half steps, three frets or one and a half tones (all equivalent).

Cells are the smallest units of melody, of three to seven notes, rarely more. A single cell is a structure, but when you combine cells or repeat a cell on different notes, you are making a design.

map the fretboard

- ✦ Strum the chord changes (the chord progression) with chord fingerings and with appropriate comping rhythms playing through with one comping example, then another.
- ✦ Begin your work on the smaller four strings, since solos are more typically performed on them.
- ✦ Attempt to retain the range as you change chords by starting the next arpeggio or scale on

the nearest chord tone, not necessarily starting on the root of the next chord. In retaining the range, orient the next arpeggio either to the first or last note you played on the previous arpeggio. Orienting to the first note is usually more straightforward. Use common tones to start each chord where possible, otherwise the nearest chord tone.

- ✦ It is preferred that you begin a chord on its root, third or fifth, not the seventh. Chord tones are preferred on all rhythmically important beats, such as the third beat in 4/4 time.
- ✦ Where the last note you would play on one chord would redundantly be the same note as the first note of the next chord, change the last note on the previous chord to an upper or lower neighbor of the first tone in the next chord. The upper or lower neighbor may be a pentatonic scale interval up to a minor third (three frets).

core melodic tones

The primary melodic tones are those in both the current key scale and in the current chord. See [Core Melody](#).

harmonic theme and variation

Establish a theme. [See Minimalist Themes](#)

decoration with slurs

Slide, hammer, pull-off, bend, release bend, tremolo pre-drop and return, tremolo flick (Greg Gillis of Night Ranger). Usually these use non-chordal tones. The non-chordal tones would usually be of shorter duration.

ornamentation with non-chordal tones

Grace notes are short decorative notes that lead into main melody notes or quickly move adjacent to main melody notes. Ornamentation includes grace notes, multiple grace notes, and the use of an arpeggio as multiple grace notes. Classical ornamentation includes the turn and mordent. In the turn, a main melody note is played, followed by a note above it, below it, then returning to the main melody note. With a mordent, the main melody note alternates rapidly with the note above it (upper mordent) or below it (lower mordent).

Bebop ornamentation is similar to baroque ornamentation, but often uses flatted versions of notes in a quick flurry, darkening the mode briefly.

Lower chromatic embellishment precedes each note with one a half step below it, especially as in jazz. These are commonly slurred and more frequently applied to chord tones.

Time Elements

choose the rhythmic elements

Using a repeating rhythm from [Melodic Rhythms](#) (especially four through seven note rhythms) for every two beats of 4/4 or for every three beats of 3/4 to play up and down one octave from each tone of each scale or arpeggio. Play up and down from any chord tone for an octave.

Tend to play chord tones on the beat, or on rhythmically emphasized parts of the beat. Whatever parts of the bar are primary accents played by the accompaniment, such as one and the and of two (the beginning beat one and the last half of beat two), you should tend to play as chord tones.

Apply rhythmic words in this straightforward manner:

- ✦ six-note rhythms for triad arpeggios
- ✦ four-note rhythms for quadrad (usually seventh chord) arpeggios
- ✦ five-note rhythms for pentatonic scales
- ✦ seven-note rhythms for major scales

pattern your phrase start points

Phrases are typically two bars long. They can start before, on or after the first beat. It is best to make patterns of your phrase start points. For example, play four two-bar phrases with the pattern on, before, on, before.

use an interesting rhythmic theme

You could strum rhythms from Four-Pulse Rhythmic Words or Six-Pulse Rhythmic Words for ideas on muted strings, followed by playing same rhythm on a scale or melodic cell. Practice strumming a melodic rhythm on muted strings, then employing it into a melodic line.

pickups and pushes

Pickups and pushes are a simple way to make your phrases more interesting. See [Push and Pickup](#).

create a story with the emotive curve

Imagine a graph of the emotive intensity in a song, showing time from left to right and intensity from bottom to top. A time-based artistic expression like a film, a song, or a play usually has peaks and ebbs

of intensity with a climax of intensity near the end. Consider different contexts of such an emotive curve: rhythmic, dynamic, textural, tonal, etc. Design the curve with its peaks and ebbs.

make your phrases breathe

Combine long and short durations or legato versus staccato. Combine calm long notes and exciting flurries of fast notes.

USING SCALES AND CHORDS IN IMPROV

Key Scales, Parent Scales and Chord Scales

key scales

A *parent scale* is a reference scale from which a scale or mode was derived. Most commonly, a major scale is used as a parent scale. Any of the modes of the major scale would refer to that major scale (which was their source) as their parent scale. Other parent scales are *major #5*, *major b3* and *major b6*, each of which have seven modes like the major scale and are simple modifications of the major scale.

C major scale uses the notes C, D, E, F, G, A, B and C. Modes are constructed on each of the tones of the C major scale. [The Discovering the Modes of the C major Scale](#) section of the [Modes](#) chapter demonstrates modes of the C major scale. Those modes all have the C major scale as their parent scale.

parent scales

Parent scales are the common major scale or simple modification of a major scale, such as melodic minor (major scale flat three) on which a mode is based. Parent scales are used as a reference and do not imply the key on the note that names the parent scale, although it can be.

A Aeolian, for example, uses a C major parent scale. An example of A Aeolian would play the C major scale from scale tone six to six, from A to A. You could be playing on a Dm chord with an A Aeolian scale using a C major scale with the tone center on A.

chord scales

Chord scales are named after the current chord and are usually used to consider the elaboration of the current chord, not to establish a permanent key on that chord.

key scales, parent scales and chord scales in practice, an example

Consider this situation: you are in the key of C (sounding as if the music should end on a C chord) and the melody is made up with C Mixolydian (a C major scale with a flat seven) while you are currently on an “Bb” chord (you’re focusing on a bar with a Bb chord). The key is C. Since C Mixolydian is a C major scale with a flattened seventh and has the same notes as F major scale, The parent scale would be F major. Since the current chord is Bb, naming the notes in use with a Bb tone center is Bb Lydian. All three scales (C Mixolydian, F major and Bb Lydian) have the same notes: C-D-E-F-G-A-Bb-C. It’s just a matter of naming them with the relevant note in the context you are considering.

prefer key scales to chord scales

In expecting what they will hear next, the listener tends to predict the next part of the melody at any point, along with the improviser. The improviser has a clearer idea of what will be played next, but the listener that has a similar background in listening to music will predict much the same thing as the improviser. Listeners are usually more oriented to vocal melody which is more related to key scales than to chord scales. Key scales are more direct for the listener, who is typically not well-trained at thinking different scales for each chord as someone might be on a mechanical instrument such as the guitar or piano where the scale relationships have a more tangible graphic and visual relationship.

emphasize chord tones within key scales

In addition to preferring key scales, emphasize notes of the current chord that are common to a key scale. I call these *core melodic tones*. See Tonal Themes And Schemes.

chord families

Chord qualities can vary within the same family. Within each chord family, the triad part of the chord is consistent and the chords in the family share a common mood. The common families are:

<u>chord family</u>	<i>variants</i>
major	major, ma7, ma9, ma9/6, ma7/6, 6, add 9, 6/9
dominant 7	major, 7, 9, 13 no 11 = 9/6, 7/6, 6, add 9, 6/9
altered dominant	augmented, major b5, 7 (with any or all: b5-#5-b9-#9); 9b5, 9#5
minor	minor, minor 7, minor 9, minor 11, minor 13, m6, m add 9, m6/9
diminished	diminished, dim.7, m7b5, m9b5

elaboration and abbreviation of chord progression

Chord progressions that change within the range of a beat to two bars can be abbreviated. Common abbreviations are playing a II V change as if it were II or as if it were V. Of course, this should be done discretely. For example, in playing IIm over II and V, IIm7 works well for the II and IIm6 for the V, since IIm6 = V9 no root. Or, the IIm7 sound may work over both chords. Each situation is unique and must be auditioned in the mind and preferably by testing the sounds in playing.

pentatonic scales

Use Im pentatonic (five tone) scale during any of the chords, but especially during the Im chord. Whatever chord it is used on, you should generally emphasize the note of the current chord

optionally with the chromatic note between 4 and 5. This note has three uses:

- As a *lower chromatic embellishment*, where it is used before scale tone 5. In this case, it would be called “#4”.
- As a *passing chromatic tone* between 4 and 5, where it would be called #4 in ascending and b5 in descending.
- As a changed scale tone, changing the common minor pentatonic scale (m7/11) to minor 7/11b5.

blue notes

Flatted three, five and seven in a scale can be used expressively against a chord that has the natural version of the same number. This is a mood-darkening expression, common to blues-related styles. They are commonly called *blue notes*.

major scale and Aeolian mode as key scales

Major scale includes the notes of a major chord (1, 3, 5) on its tone center (the note after which it is named). Aeolian mode (1, 2, b3, 4, 5, b6, b7 of a major scale) is a minor scale, since it includes the notes of a minor chord (1, b3, 5 of a major scale) on its tone center.

In music originated in Europe and Africa, the major scale has been the reference scale for all other scales beginning with the common practice period of classical music in Europe in 1600. For as many years, the major scale and a mode on its sixth step have been the primary scales in [the relative major and minor system](#). If a song is in a major key where it is expected to end on a major chord, it has been presumed that it is based on the major scale. If in a minor key, a song has been presumed to be based on the Aeolian mode.

Mixolydian, Dorian and other modes as key scales

Other modes based on a major chord include Mixolydian which has a b7 and has a darker mood and Lydian mode which has a #4 with a more exotic mood. Dorian is a minor scale with a natural 6 with a brighter mood while Phrygian is a minor scale with a middle-eastern sound (1-2-b3-4-5-b6-b7 of major).

Mixolydian mode can be thought of as a major scale from five to five, with the key on five (C major scale from five to five is G-A-B-C-D-E-F-G). Or, it can be a different major scale with a flatted seventh (G major scale with flat seven is G-A-B-C-D-E-F-G).

Dorian mode is used in blues-related styles as darkened version of Mixolydian. Mixolydian has a flat seven (G major scale with flat seven is G Mixolydian, G-A-B-C-D-E-F-G). Dorian has a flatted third as well, which darkens the mood further. In modal jazz, Latin rock or similar styles, Dorian can be used as a mode in its own right. Dorian examples are Afro Blue, Evil Ways, Oye Como Va, Milestones, Put It Where You Want It, Take Five, Chameleon, Soul Sauce, This Masquerade (Benson solo section), In Memory of Elizabeth Reed (Allman Brothers), I Wish.

USING ARPEGGIOS IN IMPROV

An Arpeggio for Each Chord

Arpeggios can be used to represent each chord in a chord progression. For chords that have a long duration, this works well. Duration is time-based, not beat-based. If you are playing at a very fast tempo, it may be difficult to play and hear an arpeggio for chords with a duration of two to four beats. At a slow tempo, it is easier to play and hear an arpeggio for each chord. When the duration of chords are short, consider abbreviating the chord progression and using one arpeggio over a few chords. See “[A Single Arpeggio Used to Represent a Few Chords](#),” below.

The arpeggio for a particular chord can be named after the chord, or may be substitute. You can learn about substitute chords (arpeggios are chords played one note at a time) in the chapter [Substitution](#).

A Single Arpeggio Used to Represent a Few Chords

When chords are changing quickly and it is difficult to play and hear an arpeggio for each chord, abbreviate the chord progression. Determine the temporary key sound for a few chords and play an arpeggio to represent that key. Here are some common examples.

common abbreviated chord progression

duration of all chords (one second is two beats at 120 BPM)	original chord progression		abbreviated progression	
	in letters	in numbers	in letters	in numbers
unlimited	Cma7-Fma7	Ima7-IVma7	Cma7	Ima7
unlimited	Cma7-Am7 (or C-Am)	Ima7-VIm7 (or I-VIm)	Cma7 (or C)	Ima7 (or I)
unlimited	Am7-Fma7 (or Am-F)	Im7		
two seconds or less	Cma7-Am7-Dm7-G7	Ima7-VIm7-IIIm7-V7	Cma7	Ima7
2 to 4 seconds	Cma7-Am7-Dm7-G7	Ima7-VIm7-IIIm7-V7	Cma7-Dm7	Ima7-IIIm7
two seconds or less	Am7-Am7-Bm7b5-E7	Im7-Im7-IIIm7b5-E7	Am7	Im7
2 to 4 seconds	Am7-Am7-Bm7b5-E7	Im7-Im7-IIIm7b5-E7	Am7-E7	Im7-V7
two seconds or less	Am7-G6 (or Am-G)	Im7-bVII6 (or Im-bVII)	Am7 (or Am)	Im7 (or Im)

Memorize Seventh Arpeggios Thoroughly

a challenge with ninth and larger arpeggios

When you ascend or descend to the tone center using a scale in improv, you can usually continue to ascend or descend, without any accomodation. When you ascend or descend a ninth or larger arpeggio to its tones that are the ninth or higher, you would need to come back to the octave to continue ascending or descending.

root b3 5 b7 9 root b3 5 b7 9 9 b7 5 b3 root 9 b7 5 b3 root

5 8 7 5 9 7 5 5 8 7 7 8 5 5 7 9 5 7 8 5

seventh arpeggios can continue past the root, like scales

When you ascend or descend to the chord root using seventh arpeggio in improv, you can continue to ascend or descend, without any accommodation. This makes it easier to play a fast passage. Although the ninth and larger arpeggios are more colorful, you should use seventh arpeggios when speed is the issue, since they are so much easier to recall and play. To take advantage of this, you should thoroughly memorize [Quadrant Arpeggios](#) (in the [Prime Scales, Chords and Arpeggios](#) chapter).

MINIMALIST THEMES

Two notes alone don't make an interesting theme. They need repetition and something to make the repetitions different from one another. It's also challenging to make a theme interesting with three or four notes. But it can be done. In fact, the secret to great improvisation and composition is focusing on very few notes and use theme and variation and interesting connective material between the thematic content.

Choosing the Notes

notes of the tonic chord work best

To build a tonic chord, are built on the tone center (tone 1) of the key, most commonly with every other note, such as 1-3-5-7. The most common tonic chords are triads (three notes, 1-3-5) or quadrads (four notes, 1-3-5 7). A quadrad may also be a sixth chord with 1-3-5-6.. The best tones to emphasize are one and five (tones one and five of a major scale named after the key), 1-3 or 1-b3, 5-b7 (not so much 5-7), 3-5 or b3-5 (less common), 6-1.

Making the Repetitions Different

To vary the repetitions of the theme, use interesting rhythm, slurs, ornamentation with non-chordal tones (see [Tonal Themes and Schemes](#)), harmony (commonly [thirds and sixths](#)), [double stops](#), top-[voice leading](#), timbre. All of these are components of [Theme and Variation](#).

THE POWER OF THE FIFTH

Of all the intervals to use in improvising, the fifth is strongest. Seconds are just stepwise movement. Thirds are what build arpeggios. Both of those are well-worn in our music repertoire. Fourths have been exploited in use of pentatonic scales, since the common pentatonic builds fourths with every other note for four of its five tones. Melody works best with intervals of a fifth or smaller.

The fifth is such a strong, primal interval. Arpeggios and chords are built in standard practice with every other tone of a seven tone scale (like the major scale). Every other arpeggio tone is a fifth.

fifths within ninth arpeggios

System 1: Cmaj9 and C9

Measure 1 (Cmaj9): Treble staff shows eighth-note arpeggio (C4, E4, G4, Bb4, D5, F5). TAB: 8 7 10 8 7. Measure 2 (C9): Treble staff shows eighth-note arpeggio (C4, E4, G4, Bb4, D5, F5). TAB: 8 9 11 8 10 8 11. Measure 3 (C9): Treble staff shows eighth-note arpeggio (C4, E4, G4, Bb4, D5, F5). TAB: 9 8 10. Measure 4 (C9): Treble staff shows eighth-note arpeggio (C4, E4, G4, Bb4, D5, F5). TAB: 10 9 11 8 10 8 11.

System 2: Cm9 and Cm9(b5)

Measure 5 (Cm9): Treble staff shows eighth-note arpeggio (C4, Eb4, G4, Bb4, D5, F5). TAB: 8 11 8 10 8 11. Measure 6 (Cm9): Treble staff shows eighth-note arpeggio (C4, Eb4, G4, Bb4, D5, F5). TAB: 8 8 10. Measure 7 (Cm9(b5)): Treble staff shows eighth-note arpeggio (C4, Eb4, G4, Bb4, D5, F5). TAB: 10 11 8 11 11 11. Measure 8 (Cm9(b5)): Treble staff shows eighth-note arpeggio (C4, Eb4, G4, Bb4, D5, F5). TAB: 8 11 10.

System 3: C7(b9) and C7(b5)

Measure 9 (C7(b9)): Treble staff shows eighth-note arpeggio (C4, Eb4, G4, Bb4, D5, F5). TAB: 8 9 11 8 9 8 11. Measure 10 (C7(b9)): Treble staff shows eighth-note arpeggio (C4, Eb4, G4, Bb4, D5, F5). TAB: 9 8 10. Measure 11 (C7(b5)): Treble staff shows eighth-note arpeggio (C4, Eb4, G4, Bb4, D5, F5). TAB: 10 11 9 11 11 11. Measure 12 (C7(b5)): Treble staff shows eighth-note arpeggio (C4, Eb4, G4, Bb4, D5, F5). TAB: 9 11 10.

THE MELODIC LINE

The most basic components of melody are pitch and rhythm.

Each musical note has its own pitch, or speed of vibration. Pitch needs to relate to the community of other instruments in the performance in regard to chords, which are multiple notes played simultaneously. Rhythm should relate to the other instruments regarding rhythmic themes based on a regular pulse.

The *melodic curve* or *melodic line* conceptually represents rhythmic horizontally and pitch vertically on a timeline.

ORDER OF MELODIC IMPORTANCE

Tones have an order of melodic importance in relation to both the key and the current chord. The tones of the key are more important than those of the current chord, since the listener thinks primarily in terms of the key.

Consider the order of melodic importance for the tonic chord (the chord that names the key) first. Secondly, consider the order for the current chord. Tones that are common to a key scale and the current chord are the core melodic tones and are highly preferred in melody.

The order of melodic importance for the tonic chord are the root, the fifth, then the coloring tones of the chord. Coloring tones are the third, the seventh, and any other tone implied by the chord name. The weight of importance can be established by the genre or style of the song and performer. Next in the order of melodic importance are the non-chordal scale tones, notes in the scale but not the chord.

Last in the order of melodic importance are the chromatic tones, which are all the notes that are left. Last place goes to notes that are particularly out of character, such as a major third (scale tone 3 of a major scale on the chord root) on a minor chord or a major seventh on an chord that has a minor seventh.

SETUP AND TARGET TONES

Target tones are chord tones of the next chord. Setup tones are those that melodically lead to tones of the next chord. Upper and lower neighboring tones are the most common setup tones. When the first tone of the target chord will be its root, its fifth can be used immediately before it as a setup tone.

Target Tone Sequences

The core of a melody is its target tones, the notes common to the scale and arpeggio you are depicting at any moment.

The best way to progressively build your improvising ability is:

- ✦ practice the scales and arpeggios you intend on using
- ✦ determine the target tones that are common to each chord (arpeggio) and scale
- ✦ using your intuitive right brain, thinking vocally, create a sequence of target tones in long durations, roughly equal four to six fast notes
- ✦ create many melodic designs on each target tone sequence, so you become expert at connecting target tones
- ✦ become so good at creating target tone sequences that you can do it while improvising

CLEARLY ESTABLISHING THE CHORDS

The two clearest ways to establish a chord are to melodically imply a succession of chords that leads to the chord or to preview the chord by playing its arpeggio tones or scale that contains its chord tones immediately before the chord occurs.

Logical Structure Of The Melody Versus The Actual Chord Progression

It can become less important to establish a chord when the melodic content is highly structured and logical, so that it stands on its own. The melody may temporarily take on a life of its own, causing a second harmonic structure. In such a case, the melody and accompaniment each suggest their own chord progression, most often agreeing on the same one, but sometimes differing. When they differ, the melody is referred to as *outside*. Its sort of like the public speaking tact of speaking on the subject you want to be addressed, regardless of the topic.

To make outside playing more acceptable, phrases may have little to do with the current chord, but are convincing as part of a serial structure (repeated structures).

Masking The Harmonic Remoteness Of The Chords

When chords in a progression are particularly disrelated harmonically, weigh heavier on the logical structure. Grab the attention with another aspect, such as successions of notes in thirds, a fragment pattern (repeating numeric sequence of scale or arpeggio tones), wailing on the tremolo bar, a blurring fast scale or whatever. In any case, be sure to “nail” a chord tone at the beginning of the chord.

Perfect Fourth and Chromatic Cadences

Melody commonly implies cadences (short well-known chord progressions) with root movement up in perfect fourths (equal to down in perfect fifths). Dominant chords moving down chromatically to a target chord's root are [flat five substitutes](#). See [Flat Five Substitute Chord Progression](#).

Neighbor Tone Chords

Implied chords built on the next higher or lower chord tone from the root of the target chord can be used immediately before the target chord. The tones of the neighbor chord include many of the tones *not* in the target chord, so they create to create a soft tension and resolve to the target chord.

PHRASING AND DRIVE

Phrases Start on, Before or After the First Beat

Music is so much more interesting to experience if there is some creative pattern to sequences of phrases in regard to their starting point in relation to the first beat. Phrases are typically two or four bars in length.

Try improvising a number of phrases, say four phrases, with every one starting in the same part of the bar, on the first beat for example. Now, instead play four phrases with a varied pattern, such as “before, before, before, on”. You will probably find the varied phrases start points more interesting.

That isn't to say that sets of phrases can't have the same start point. If the other elements of melodic and harmonic design are highly creative and interesting, varied start points might not be essential. But, varied start points in phrasing is an element not to miss.

Creating Drive and Movement

Plays were performed in ancient Greece with one of the players tapping their foot with a regular beat with bells on their ankle. It was used as rhythmic reference point for the cast. The bells were not audible to the audience, nor was their beat necessarily duplicated in the lines spoken by the cast members. Unfortunately, the prominence of this kind of beat developed into a strict and limiting sense of bar units in European music. Very predictable.

Fortunately, American music has counter-acted this tendency in the last hundred years or so, particularly with the colorful abstract influence of African Americans. By playing up to the first beat, but not *on* it and by generally playing a lot on the “offbeats”, music creates more tension and a greater feeling of music. It is better when the beat is less predictable.

Play sets of two or four phrases, ending *just before* the first beat on each phrase until *on the beat* in the last phrase.

Pickups are short groups of notes (or even a single note) played immediately before the first beat of a bar. They “lead into” and rhythmically anticipate the bar. It is particularly interesting to play pickups *without* playing on the first beat they predict.

Try playing consecutive pickups, *not* rhythmically resolving to the beat. The melody to Miles Davis' song *Four* does this.

Consecutive offbeats (playing on the “and” but not on the numbered beat) is an effective device to build tension. This is common to funk music such as James Brown or Tower Of Power. Practice phrases with consecutive offbeats. Funky.

PREPARE FOR MODAL IMPROV IN FIVE STEPS

Concise Outline

1. Arpeggios and Scales

Memorize five major and minor pentatonic scale fingerings. See [Compensated Fingering for Standard Guitar Tuning/Pentatonic Scales](#).

Memorize [reference major scale fingerings](#).

Study Strict Vertical Position in the chapter [Playing in Position](#).

Learn the five [octave shapes](#).

Learn how to construct arpeggios and chords in the chapter [Constructing Chords in the Key of the Chord Root](#).

Learn how to use [Chord-Beat Relationship](#) with [Six Tone Scales](#) for triads and [Octatonic Scales](#) for quadrads (4-note chords).

See the chapter [Modes](#)/Modal Key-Scale-Cycle Diagrams. Study [Agreement & Disagreement In Spelling Chords](#).

See the [Youtube playlist on arpeggio studies](#).

Spotify lists of good improv songs (Spotify profile [jgleason6](#)): [major key](#), [minor key](#), [blues styles with Mixolydian & Dorian](#), [harmonic major](#), [melodic minor](#).

2. Phrasing. Use the [work song/field hollar](#) resource to sing blues-based phrases or other vocally-oriented core melody.

3. Ornamentation. Play up and down an arpeggio with mordents or turns on the chord tones. Upper mordents move from a note up a scale tone, then back. Lower mordents move down a scale tone from a note, then back. Upper turns move up-back-down-back. Lower turns move down-back-up-back.

4. Rhythmic and Harmonic Theme and Variation

5. Melodic Devices. See the chapter [Melodic Cells](#)/Melodic Cell Types. Key Scale or Chord Scale (see the chapter [Modes](#)/Modes of I-IV-V Blues).

See Youtube studies in the categories above: [Paint It Black](#), [Angel from Montgomery](#), [Fragile](#), [Blue Bossa](#).

What Is A Mode?

tone center

A tone center is the root of the chord you would expect a piece to end on. You would expect a chord progression to end on a chord which gives a feeling of resolution. That chord would be the tonic chord, or main chord in the progression. If the tonic chord is Cm7, the tone center is “C.” If the tonic chord is “Ebm”, the tone center is “Eb.”

key

A song is said to be in a key named after the tone center. If the tone center is “A”, the song is said to be in the key of “A”. The key may be further qualified by the scale or mode type, such as “A” major, “A” minor or “A” Mixolydian.

The term “minor” is commonly used loosely in key names where the song may be in any mode which has a minor chord built on the tone center (e.g., Dorian Aeolian or harmonic minor). Likewise, the term major is sometimes used in reference to any mode which has a major chord built on the tone center (e.g., Ionian, Mixolydian, Lydian or Phrygian major).

mode

A mode is a seven tone scale with the tone center on a particular note, which establishes a key on that note. Any note of a scale could be designated as the key. Each of the different scale tones of a scale will produce a different mood when it is used as the tone center. So, using each of the different scale tones as a tone center and key produce a different mode.

The four common modes are major (Ionian mode), Dorian mode, Mixolydian mode and Aeolian mode, respectively built on steps one, two, five and six of major scales. Of the remaining modes, Lydian on step four and Phrygian on step three are rare. Locrian the mode on step seven of the major scale is very rarely used as a key.

Custom Choice of Fingering

Some modal situations require special choices of fingering. Play in major modes with major (Ionian) or Mixolydian. Play in [minor mode with Aeolian and harmonic minor](#). Playing blues with of Mixolydian and Dorian. Play [jazz with bVI melodic minor](#), with the I chord in major, Mixolydian, Dorian or Aeolian and melodic minor on flat six of the key to produce super-altered V-type chords or the bII13#11 flat five substitute.

In each case, the set of preferred fingerings are shown along with a table to show the numbered tones you would choose for scale tone chords or arpeggios.

1. Modal Improv with Arpeggios and Scales

Start with simple progressions. Two-chord progressions like I-IV (C-F, G-C or F-Bb), Im-V (Am-E, Dm-A or Em-B), or I7-IV7 are good (C7-F7, G7-C7 or F7-Bb7). Use arpeggios, pentatonic scales and seven tone scales. Use elements of [field hollars](#), [work songs](#) ([more](#)) and African indigenous chants.

agreement & disagreement in spelling of adjacent chords

Be able to site the parent scale thirds in letters and numbers for scale-tone triads, seventh and ninth chords. Learn [Key Signatures](#). Study [Voice Leading](#)/Perfect Four Cadences/[Descend Five and Seven](#). See [Commonality Chords](#).

Look for agreement and disagreement with letters in chord spelling. Considering scales for two or more consecutive chords, look for a single scale that includes all of their notes by spelling the chords to see if there are more than one version of each letter (C and C#), in which case you would multiple scales. You can use mismatched scales with the chords such as A harmonic minor (with G#) over Am7 (with G natural) where the A harmonic would be a familiar middle eastern or flamenco sound (avoiding long durations of G# in the melody with G natural in the chords).

example: Black Orpheus in Am

Consider enharmonic spellings (such as G# and Ab) and choose the version appropriate to compare to another chord (a scale with Db has the same note as C# for an A7 chord with C#). Playing Dm11 G7 (or G7b9 or G7#5) Cma9 (using G7b9 as if C was going to be Cm) could use (1) Dm7b5 (bluesy) G7b9 Cma7 as part of C harmonic major or (2) Dm7 (vanilla) as part of C major, except C harmonic minor during G7b9. G7b9 no root is B°7=D°7=F°7=G#°7 (memorize [dim7 & scale fingerings 1, 2 & 3](#)).

G augmented is the basis of G7#5 (G whole tone in C major is b7-1-2-3-b5-b6 of G, where b7-1-2-3 is part of C major scale). Learn [augmented arpeggio fingerings](#). V whole tone scale is more appropriate for the key of I major than I minor, since I minor typically has a V7b9. You Are the Sunshine of My Life intro has F# aug/F# whole tone scale ascending in major thirds. Playing Bm7b5 E7b9 Am7 E7b9 no root is B°7=D°7=F°7=Ab°7.

see the seven-octave pentatonic forward and back slash system

combine scales and arpeggios

Combine, pentatonic licks, arpeggios (see [Prime Chords, Scales and Arpeggios/Triad Chords & Arpeggios](#)), seven tone scales, [Fragment Patterns](#) (with anti-metric grouping and rhythmic displacement).

chord-beat relationship

See “[Relating Chord Tones to the Beat](#)”/Six-Tone Scales with Triad Tones on the Beat. Tend to put chord tones on the beat, or before beat with a “push” where you play immediately before the beat, then sustain onto the beat or leave a silence on the beat. Appoggiaturas are non-chordal tones played on the beat, then resolved to a chord tone (usually by a small interval of a scale step). The melody to Yesterday uses an appoggiatura on the key major chord, then on the relative minor.

2. Phrasing

play in phrases with pauses

Phrases are usually from one to four bars long, most commonly two bars. Most of your improvisation should be phrased like speaking with breaths. End phrases with a rest (silence) or sustain. This gives the listener opportunity to contemplate your melodic statements and it gives you the chance to create theme and variation and to make sections with your phrases. In eight bars, you may play four two-bar phrases, varying as to their start points (see below), in relation to the first beat of every two bars, before-before-before-on. Your first and third phrases could each be a statement and your second and fourth phrases responses.

create patterns with phrase start points

Phrases can start on, before or after the first beat of the bar. Phrases are most commonly two bars long, but can be one or four (rarely three bars). Be patterned and diverse. For example, play three phrases that start before the first beat followed by a fourth phrase starting on the first beat to signify the end of a section.

The verse to *A Whiter Shade of Pale* has sets of three two-bar phrases to create an imbalance and suggest a nauseous feeling of someone that's had too much to drink.

linear heptatonic pickups and pushes

Segue into phrases that start before the first beat of the chord creating a cadence with a tones of a setup chord (often dissonant) before the first beat of the target chord, creating tension and release. Or anticipate the target chord by using a pickup with an arpeggio or scale that represents the target chord.

Use three-note linear heptatonic pickups with eighth notes in 4/4 starting on the and of three and starting a third above or below the third note to create chord tone push. Not easy? Okay, practice the 1-3 fragment pattern (thirds).

Four-note linear heptatonic pickups with eighth notes in 4/4 starting on three and starting a fourth above or below the fourth note to create chord tone push. Not easy? Okay, practice the 1-4 fragment pattern (fourths). Remember the major scale can be all perfect fourths, except 4 up to 7 or 7 down to

4 is an augmented fourth. Also, remember the skewing of the fretboard pattern between the third and second string because of the change of tuning.

Pickups with the target on the beat with linear heptatonic scales use an interval one number larger than the number of notes in the pickup. A four note pickup including the target on the beat would use an interval of a fifth.

Pickups can use scale non-linearly with a melodic theme.

mix slow and fast elements in phrases

Base a phrase on lyrical vocal-oriented melody. Sing phrases as you play them on guitar. Segue in or out of the phrases with bursts of fast notes.

3. Ornamentation

use ornamentation like mordents and turns

Upper mordents move from a note up a scale tone, then back. Lower mordents move down a scale tone from a note, then back. Upper turns move up-back-down-back. Lower turns move down-back-up-back.

chromatic embellishment, chromaticized arpeggios, chromaticized scales

Chromaticism started showing up in the late nineteenth century composition of eastern European and Russian composers like Chopin, Tchaikovsky and Stravinsky, the reflected by ragtime composers including Scott Joplin and Jelly Roll Morton. It influenced blues and most American pop. By the time bebop started in the early 1940's, it became very sophisticated with chromatic encircling, chromatic enclosure and other designs. See the chapters [Chromaticized Arpeggios](#) and [Chromaticized Scales on Arpeggios](#).

Lower chromatic embellishment is common in jazz, where any chord tone can be preceded by a note a half step (one fret) below. This is least often done with the root, perhaps because it is too obvious. The lower chromatic embellishment is a well-established convention, but its hypothetical counterpart an "upper chromatic embellishment" is generally not used, since it hasn't been established common repertoire. Approaching a chord note from a half step below doesn't require that the lower chromatic note is in the scale being used, while approaching a chord note from a half step above doesn't sound right unless it is in the scale.

mix staccato and legato (tenuto)

Use a mixture of short notes (staccato) and long notes (legato phrases with long *tenuto* notes). The theme to Europa is a good example of a combination of staccato and tenuto.

4. Theme and Variation

use harmonic and rhythmic theme and variation (either or both)

Restate themes with the pitches changed to represent a different chord or scale. Or restate themes by using the same notes but changing the rhythm by displacing the theme earlier or later in time or by repeating it in such a manner that each instance starts on a different part of the bar. For example, a three note theme in half beats, first starting on the beat, then starting on the offbeat.

change rhythmic level

In 4/4 or 3/4, combine half notes (2 beats), quarter notes (1 beat), eighth notes (1/2 beat), eighth triplets (1/3 beat, three on a beat), sixteenths (1/4 beat, 4 on a beat), sixteenth sextuplets (1/6 beat, 6 on a beat).

learn all the four-pulse and three-pulse rhythmic words to create melodic rhythm

See the chapter “Rhythmic Words and Comping”.

offbeat rhythm

For a jazzy, funky or salsa rhythm, play many offbeats in your phrases, sometimes consecutive offbeats. See [Offbeat Family of Rhythms](#). Salsa piano uses consecutive offbeats

use straight versus swing eighths or swing sixteenths

Regular swing divides the beat into three parts where you play on the first and third part. In that situation, the first note is 2/3 of a beat and the second note 1/3 of a beat. There is also *degrees of swing*, where the first note may be anywhere from 50% to 75% of the beat and second note the remainder of 100%.

free online metronome

There is a great free metronome that has degrees of swing at this link <https://www.onlinemetronome.app>. Here are instructions for online metronome:

tempo

Set the tempo with the long slider near the top. Slow blues is 50-75 BPM. Ballads or slow rock are 50-80 BPM, funk is 85-120 BPM, rock is 115-180 BPM, up-tempo jazz is 180-300 BPM.

beat divisions and swing: click on advanced. In the circle to the right of the word “advanced” click on the musical note (initially a quarter note) and change it to the pair of eighth notes (two notes with a thick horizontal beam) for two parts per beat or to and four sixteenths (four notes with two thick

horizontal lines) for four notes per beat. Slow blues is Click on “swing” immediately below the musical note circle. Use the button to turn swing on or off. Set the swing percentage with the slider.

accent: vertically in the middle of the screen, make sure “accent” is on. To the right of accent, use the plus or minus buttons to set the beats per bar to “4” or “3”. For most of your songs, you would want “4”.

5. Design with Melodic Cells

See [Melodic Cells/Melodic Cell Types](#). Study these categories:

- ✦ Linear Scales and Arpeggios as Cells
- ✦ Melodic Rhythm Cells
- ✦ Chromaticized Arpeggio Cells
- ✦ Harmonic Type Melodic Cells
- ✦ Decoration Cells
- ✦ Theme and Variation Cells

Fragile verse in Em

verse progression: Em-Em-Am-Am-B7-B7-Em-Em (simplified)

For pentatonic scales, black tones are triad tones combined with gray to make a pentatonic scale. For ninth arpeggios, black tones are a complete ninth, gray are parts of a ninth in another octave. All the tones combined make a seven tone (heptatonic) scale. Start with A form for the key, the fourth column.

I Put a Spell On You (Creedence version) in Em

Em	Em	Am	Em	Am	Am	B7	B7
Am	Em	Am	C7	Em	B7	Em-Am	B7

The black tones are triad tones. The black and gray tones combined make a pentatonic scale. All of the tones combined (including those with no colored background make a seven tone (heptatonic) scale. The position is the top fret on the diagram.

Start with A form (the fourth column) in position VII). Em7b5 has the same notes as C9 no root, so it works well on C7, making C7 sound like C9.

IMPROV WITH MELODIC MINOR MODES

These use bVI melodic minor of the target key.

target I chord in major, Mixolydian, Dorian or Aeolian/harmonic minor

Fingerings for those targets are shown on the previous two pages. In a melodic minor scale on bVI of the target chord, Lydian dominant is on IV of the bVI melodic minor and super Locrian is on VII of the bVI melodic minor.

Lydian dominant mode for bII of the target

IMPROV WITH HARMONIC MAJOR MODES

Harmonic major scale is a major scale with a flat six (1-2-3-4-5-b6-7) or harmonic minor (1-2-b3-4-5-b6-7) with a major third (1-2-3-4-5-b6-7)

THE OBJECTIVE

This system has a simple basis and a broad scope. In abstract harmonic music like jazz we need to be able to rapidly incorporate arpeggios and scales derived from many keys and mold them into melodies that the listener can understand and retain.

Primary Chords

Memorize these primary chords and the related rules of substitution so you can play a basic version of most chord progressions you read or are otherwise called upon to play.

Heptatonic Scales and Subset Arpeggios

We're going to use six major scale fingerings as a basis for four heptatonic scale types, fifteen modes, seven pentatonic scales and over twenty arpeggio types, all multiplied by five octave shapes. After learning each element in five octave shapes we'll use it on song progressions in a small area of the fretboard, learning to quickly identify the octave shape for each arpeggio or scale.

How can all of this be retained and applied to spontaneous composition? With a simple basis, smart organization of modes and harmonic families and with performance-oriented practice. The great jazz improvisers are proof that this can be done.

I number major scale fingerings according to the major scale number of their lowest tone. We're going to use major scale fingerings that avoid wide double-whole step reaches in fingering. We're going to learn each mode, arpeggio cadence, pentatonic subset and melodic cell one at a time but in five octave shapes. We're going to use the three steps of performance-oriented practice to retain them:

1. work out a small family of instances, like a melodic cell applied to the root, third and fifth of a chord
2. start improvising and work them into your existing style, spending twice or more as much time as in step 1.
3. be sure to use the new elements in some kind of performance in the next few days

Pentatonic Scales

We'll use five pentatonic scale fingerings as a basis. We'll start by using each one with two possible tone centers, major and minor. Each one can be modified to produce six other types. Major pentatonic can be played with a flatted third, or with a flatted third and flatted fifth. Minor pentatonic can be played with a major third, a flatted fifth, or with sixth instead of a flatted seventh.

Scale-tone Seventh Chords

In each octave shape, we'll learn chords built on each of the seven steps of the major scale. We'll also learn the altered versions II7, III7, IV7, V7 and VI7 for secondary dominants. See [Modal II-V-I Cadences and Turnarounds/Secondary Dominant](#) and [Melodically Superimposed Cadences/Secondary Dominants](#).

INTRODUCTION

Heptatonic Major Scale Fingerings 7, 2, 3, 4 and 6

(see [Major Scale Video Links](#))

Definitions

MA is major scale, HM is harmonic minor, MM melodic minor and MAb6 is major flat six.

On 4 means on the fourth string. On 321 means on strings 321.

Hyphenated pairs of numbers (5-2) indicate a strict-vertical-position fingering, where the first number is the string on which the lowest tone center occurs in the bass and the second number is the fretting hand finger number.

A sidestep is a temporary change of position.

A head reach is the index finger reaching one fret out of position toward the head of the guitar.

Body reach is the little finger reaching one fret out of position toward the body of the guitar.

Heptatonic Scale Reaches and Sidesteps

See [Scale Tone Arpeggios and Pentatonics/Major Scale-Tone Full-Tertian Arpeggios](#) (five separate videos, each heptatonic with full-tertians for major).

MA fingering 7 (6-2): full tertian low 1 is 6-1 on 321. HM is 6-3 on 65. MM has a head reach on 5. MAb6 has a head reach on 4.

MA fingering 2 (4-1): both full-tertians in-position, two reaches. HM sidesteps to 6-1 on 432. MM omits a reach with “b3”.

MA fingering 3 (5-4): both full-tertians in-position, no reaches. HM uses 4-2 on 65. MM head reach on 1 and 6. MAb6 head reach on 5.

MA fingering 4 has both full-tertians move to fingering 5-1 on 321. MM uses 5-2 on sixth, 5-1 on strings 5-1. MAb6 uses 5-1 on 4321.

MA fingering 6 has both full-tertians in position & one reach. HM head sidestep on 321. MAb6 head reach on 1 and 6.

Only two of ten major full-tertians change position, both with a third-finger body reach on the third string.

In harmonic minor, fingering 2 has a head sidestep on 432, fingering six on 321, both from parent “2” to “2”.

Learn These Each Octave Shape:

- The seven qualities of seventh chords with root or fifth in the bass.
- I major scale, VI harmonic minor scale.
- 7th or ninth chords for 7362514 of major.
- arpeggios: VIIIm11b5b9, IIIIm7, VIm9, IIm9, V9, Ima9, IVma9
- harmonic minor VIIIm711b5b9 and III11b9b13 (b13 resolves to “5”). b9-11-b13 is a triad a half step above Phrygian major.
- melodic minor is built on flat six of the key of your target. Thinking in melodic minor, its hypothetical “3” is the target tone (up a major third). Melodic minor Im9(ma7) to IV13#11 arpeggio cadence. Im69 (= VIm711b5 and Aeolian b5). Im9ma7 is on fifth of IV13#11.
- major flat six cadence IIm13b9 V11b13 Ima9 and super Phrygian to Aeolian “6” target, which is not in the scale.
- preview Mixolydian, Phrygian and Lydian cadence families.
- 7362514 triads and pentatonics (add I711, IIm69, III711, IV7, V711).
- fifths on root, third and fifth of VIIIm11b5b9, III7b9, VIm9, IIm9, V9, Ima9, IVma9.
- 1235 on root, third and fifth of VIIIm11b5b9, III7b9, VIm9, IIm9, V9, Ima9, IVma9.
- 1345 on root, third and fifth of VIIIm11b5b9, III7b9, VIm9, IIm9, V9, Ima9, IVma9.
- an ever-expanding collection of melodic cells as shown in Expression With Melodic Cells/ Melodic Cell Types.

CHORDS

See also [Fingering Common Chords](#).

Substitution with Simpler Chords

Without a very thorough knowledge of chord fingerings, much sheet music may show chord names that you cannot yet represent with chord fingerings. Initially, that problem can be solved by substituting simpler chords.

Usually “9” or “13” in a chord name can be substituted with “7”. So “Cm9” or “Cm13” can be “Cm7”. “6” can usually be ma7. “b9” or “#9” in a chord name can be omitted. So G7b9 or G7#9 can be G7. b5 and #5 usually need to be represented. Additionally, chord names with slash bass notes (F7/Gb) can omit the bass notes. So, F7/Gb can be F7. For suspended fourth and suspended second chords with “sus4” and “sus2” in their name, “sus4” will usually work for both. “C13sus4” or “C7sus2” become “C7sus.4”. “7#5” will usually work for augmented (“aug”).

Sets of the common chords are shown below that will get you by in most of these situations. Name each chord according to its root, using the circled note on a larger string (on the left side of a diagram).

	major 7	7 (dominant)	minor 7	minor 7b5	diminished 7	7#5	7b5

CHROMATIC SCALE FINGERING

Chromatic scale is an enhancement for scales and arpeggios. See [Pentatonic Fingering/Movable Pentatonic with One Chromatic](#), [Pentatonic Fingering/Movable Pentatonic with Two Chromatics](#) and [Chromaticized Arpeggios](#).

More often, you should use the primary chromatic scale fingering shown here. It uses head reaches with the index finger in ascending and body reaches with the little finger when descending. A head reach is a reach out of position toward the head of the guitar with the index finger. A body reach is a reach out of position toward the body of the guitar with the little finger. When performing the head reach using the index finger twice consecutively while ascending, the little finger used just previous hovers to keep your place in position. Likewise, when performing the body reach using the little finger twice consecutively while descending, the index finger used just previous hovers to keep your place in position. See [Playing In Position/Strict Vertical Position](#).

In more complex melodic design, like the diminished scale, you may use index finger head reaches in descending and ascending both. See Half-Whole-Half Cells and Diminished Scale/[Fingering Diminished Seventh Arpeggios and the Diminished Scale](#).

Wide Range Chromatic Scale Fingering (Four-Notes-Per-String)

This wide range fingering can be played faster than the in-position fingering, but may not give you access to other notes you want to play in the same position. It uses the same fingering ascending and descending.

PENTATONIC SCALES

Common Pentatonic Scales By Finger Number

Place the circled note that names the key on the letter on the fretboard that names the desired scale. Use the circled note as a locator on the largest string available in the fingering. C minor pentatonic fingering 1 would be placed where the circled note on the sixth string is on the sixth string, eighth fret.

Notice that the fingerings for minor pentatonic and major pentatonic are the same, but with different tone centers. m7/11b5 and for m6/9 also finger the same with different tone centers. q

MAJOR SCALE FINGERING

Also see the chapters [Major Scale Fingering](#), [Master Pentatonic and Major Scale Patterns](#) and [Major Scale Summary](#)/Fingerings.

Inspect the tall, full-fretboard, movable major scale diagram below to see that all of the fingerings at its right are subsets of it. The full-fretboard diagram is located by the circled “1” notes, which are all the same note. The “1” can be placed on any note. **To locate a major scale fingering suited for scales** in a particular key, play the circled note on one of the bass strings (on the left of the diagram) on the desired note. For example to locate major scale fingering 2 in G major, play it it fourth position, so the circled note on the fourth string is on the note “G”. **To locate a major scale fingering suited to build arpeggios** in a particular key, place the note numbered “1” on one of the bass strings on the desired note. For example to locate major scale fingering 3 in G major, play it it seventh position, so the circled note on the fifth string is on the note “G”.

fingering 4/5

fingering 6

Major scale fingerings are numbered in this course according to the number of lowest note fingered with the index finger on the sixth string. The fingering you have just made, is called major scale in-position fingering 6. Other fingerings called three-note-per-string major scale fingerings use slightly different rules regarding playing in position. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

In-Position Fingerings, numbered by fingers

fingering 1	fingering 2	fingering 3	fingering 4	fingering 5	fingering 6	fingering 7

The in-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall. Here are the three-note-per-string major scale fingerings:

Three-Note-Per-String Fingerings, numbered by fingers

fingering 7/1	fingering 1/2	fingering 2/3	fingering 3/4	fingering 4/5	fingering 5/6	fingering 6/7

Three-note-per-string major scale fingerings shown above combine in-position fingerings, and are numbered accordingly. Fingering 1/2 combines in-position fingerings 1 and 2; fingering 2/3 combines in-position fingerings 2 and 3; and so on.

In-Position Fingerings, numbered by scale tones

MODAL SCALE FINGERING

Each scale is shown with its tonic triad in black. The tonic triad is the combination of the first, third and fifth step of the scale. The triads may be major, minor, diminished or augmented. These fingerings are essential to fluently build melody and arpeggios. They are particularly useful when adding one note to the tonic triad for triads with neighbors. See Fragment Patterns/Free-Form Triads with Neighbors Using Quadrads.

diminished arpeggios and the half/whole diminished scale

The numbers on the diagrams below are finger numbers. For half/whole diminished scale below, the black diminished seventh works on V7b9 no root (G7b9 no root in the key of C). V7b9 no root (G7b9 no root) has four names: VII^{dim}7, I^{dim}7, IV^{dim}7 or bVI^{dim}7 (B^{dim}7, D^{dim}7, F^{dim}7 or A^{dim}7).

For half/whole diminished scale below, the gray diminished seventh works on I13b9#9#11 (C7I13b9#9#11 in the key of C) by featuring the root, flatted third (#9), flatted fifth and sixth in a dark swing context.

SEVEN-TONE SCALES IN SEVEN AREAS WITH TERTIAN FINGERINGS IN BLACK AND GRAY

Categories of Fingerings

in-position fingerings

In-position fingerings use a strict vertical position fingering, where four consecutive frets are each assigned a finger. The index has an option of reaching an additional note one fret toward the head of the guitar. The little finger has an option of reaching an additional note toward the body of the guitar. See [Playing In Position/Strict Vertical Position](#).

three-note-per string fingerings

Each three-note-per string fingering combines fingering on the four bass strings (six through three, the four largest strings) of one in-position fingering with the fingering on the two treble strings (one and two, the smallest) of the next in-position fingering toward the body of the guitar.

Full-Tertian Fingerings

In [Prime Scales, Chords and Arpeggios/Seven-Tone Scales in Seven Areas with Tertian Fingerings in Black and Gray](#), the rows of fingerings with black and gray circled backgrounds show full tertian fingerings. The numbered tones in black are every other scale tone. The numbered tones in gray are the second set of every other scale tone. The ascending series of numbered tones for each color are 1-3-5-7-2-4-6 (repeat). The full tertian fingerings for major scale are below in both in-position and three-note-per-string versions. There are other sets for major scale sharp five (harmonic minor), melodic minor and harmonic major in [Prime Scales, Chords and Arpeggios/Seven-Tone Scales in Seven Areas with Tertian Fingerings in Black and Gray](#).

QUADRAD ARPEGGIOS (includes sevenths)

These fingerings show the lowest complete octave of each arpeggio in black. The remaining notes shown in grey may be above, below or both above and below. Practicing the fingerings in rows or columns allows you to more quickly memorize the fingerings. As you move to the right in each row on this page, a sequence of flatted tones will occur: flat the seventh, flat the third, flat the fifth, double flat the seventh ("bb7" is the same tone as "6"). Any note of diminished seventh can be the root. This same sequence is shown with chord fingerings in Chord Archetypes/[Fingering Families of Seven Seventh Chord Types](#).

Diminished Seventh Arpeggio and Diminished Scale

the numbers on the diagrams below are finger numbers

diminished seventh arpeggio

diminished scale

half/whole versus whole/half diminished scale

A half step is the interval from one fret to the next higher or lower fret. A whole step is a two-fret interval, such as the first to third frets. The "half/whole" diminished scale ascends alternating half and whole steps, starting with the half step. The "whole/half" diminished scale ascends alternating whole and half step intervals, starting with the whole step. Think most of the time in terms of the half/whole version of the scale and determine whether the emphasis is on the lower note or on the upper note of each chromatic pair.

C half-whole diminished scale

play 4 times

ways to use the diminished scale

Think the diminished scale as a chord. C half/whole diminished scale is the notes C-Db-D#-E-F#-G-A-Bb-C. All eight notes of a C half/whole diminished scale constitute the chord C13#11b9#9, a very dissonant, eight-note chord.

Seventh flat nine chords with no root are diminished sevenths. C7b9 with no root is E dim7. The Edim7 part of the C diminished scale can represent the V7b9 chord for the key of F, where “C” is the V. Like any diminished seventh chord, any of its four chord tones (E-G-Bb-A#) can be the root. Edim7 can also be named C#dim7. As C#dim7, it can be thought of as the V7b9 chord with no root for F major’s relative minor key, D minor.

A lower chromatic embellishment to a chord tone is a note a half step (one fret) below a chord tone played immediately before the chord tone. An upper chromatic embellishment to a chord tone is a note a half step (one fret) above a chord tone played immediately before the chord tone. C half/whole diminished scale provides lower chromatic embellishments for Db diminished seventh tones and upper chromatic embellishments for C diminished seventh tones.

The most straight-forward applications of the diminished scale are to use half/whole diminished scale in either of these two ways:

- Emphasize the lower note of each chromatic pair or the upper note in each perfect fourth pair to sound Im6b5. In each case, this emphasizes the notes of I diminished seventh. By calling it Im6b5, I’m implying that you melodically use the “6” as a lower neighbor to “1” and the “b3” as an upper neighbor of “1”. Use “b5” as an occasional blue note.
- Emphasize the upper note of each chromatic pair to sound I7b9 no root, usually used as a V type chord. This uses the notes of bII diminished seventh (I7b9 no root = bII dim7).

diminished seventh modes of harmonic minor

The important harmonic minor modes with diminished seventh are IV Dorian #4 and VII Mixolydian #1. Other diminished seventh modes of harmonic minor are II Locrian natural 6 and bVI Lydian #2.

All diminished seventh modes of major sharp five are VII Locrian natural 6, II Dorian #4, IV Lydian #2, #V Mixolydian #1.

diminished seventh modes of major flat six (harmonic major)

Diminished seventh modes of major b6 are II Dorian b5, IV Lydian b3 (Lydian diminished), bVI Aeolian b1, VII Locrian bb7. In Lydian diminished, use the “5” as an upper neighbor to #4.

Diminished Scale In Perfect Fourths

Emphasize notes most commonly by putting them on the beat, by accenting, pivot tone, etc. With pairs of perfect fourths moving in minor thirds emphasize the the upper note of each perfect fourth pair for Im6b5 and emphasize the lower note of each perfect fourth pair for V7b9. With pairs of chromatic notes moving in minor thirds, emphasize the lower note of each pair for Im6b5 and the upper note of each pair for V7b9 (ascending or descending).

Using V Diminished Half/Whole Scale As V7b9

To sound the V7b9 no root (II dim7) linearly with the V half/whole diminished scale, emphasize the upper note of each chromatic pair. In a minor key, de-emphasize the 13 of the V chord, since it is the “3” in the mi or key.

To sound the V7b9 no root (II dim7) in perfect fourth pairs moving in minor thirds, locate the scale by establishing an upper note of a perfect fourth pair as a II dim7 tone. Then play pairs of perfect fourths, ascending or descending in minor thirds and emphasize the lower note of each perfect fourth pair.

Using I Diminished Half-Whole Scale As Goodman-Christian Im6b5

This is a more vocal-oriented melodic approach. Think of the diminished half/whole scale as a I13b9#9#11 chord, particularly focusing on the Im6b5 part of it. Yes, Im6b5 is the same as I dim7, but by thinking Im6b5, you are more likely to think of the individual character of each note.

The m6b5 chord has a flat third for bluesy sounds, which can be played with a microtonal bend. The flat third uses the #9 in the I13b9#9#11 chord. It functions as an upper neighbor to the root, in terms of a pentatonic upper neighbor. If you’ve heard the blues song “Spoonful” (written by Willie Dixon and recorded by Howlin’ Wolf and Cream), that’s the main theme, repeating flat three to one.

The m6b5 chord also has a flat five. The flat five should usually be used sparingly for a very dark, bluesy effect. We’re using the #11 of the I13b9#9#11 chord as a flat five.

Arguably, the most significant swing era tone is six. The m6b5 chord has a six to get that swing color. It is the thirteenth in the I13b9#9#11 chord. Especially use the six as a lower neighbor to the root, which I call a “low six”.

To sound Im6b5 no root (I dim7) linearly with the I half/whole diminished scale, emphasize the lower note of each chromatic pair. The group of lower notes of the lower notes of each chromatic pair makes I dim7.

To sound Im6b5 no root (I dim7) in perfect fourth pairs moving in minor thirds, first build your melody as described above. Next, locate the scale in perfect four pairs by establishing an upper note of a perfect fourth pair as a I dim7 tone. Then play pairs of perfect fourths, ascending or descending in

minor thirds and emphasize the upper note of each perfect fourth pair. See: “Dovetailing Diminished Seventh Arpeggios In Perfect Fourths” below.

Combine Diminished Seventh Arpeggios to Make Diminished Scale

Linearly, the scale is 1-b2; b3-3; #4-5; 6-b7, which is the combination of I diminished seventh and bII diminished seventh. Pairing the notes chromatically produces these pairs separated by semi-colons (;): 1-b2; b3-3; #4-5; 6-b7.

When conceiving diminished scale in pairs of notes in the interval of a perfect fourth ascending or descending in minor thirds, the group of lower-pitched tones in the perfect fourth pairs makes bII diminished seventh. The group of upper-pitched tones in the perfect fourth pairs makes I diminished seventh.

Perfect fourth pairs ascend with the cycle <b2-b5; 3-6; 5-1; b7-b3>, and descend with the cycle <1-5; 6-3; b5-b2; b3-b7>.

The group of the lower-pitched first notes of each perfect fourth pair in the ascending minor thirds sequence of perfect fourth pairs (b2-b5; 3-6; 5-1; b7-b3) makes b2-3-5-b5, which is bII diminished seventh and is also I7b9 no root. The group of the higher-pitched second notes of each perfect fourth pair in the ascending minor thirds sequence of perfect fourth pairs (b2-b5; 3-6; 5-1; b7-b3) makes 1-b3-b-6, which is I diminished seventh.

The group of the higher-pitched first notes of each perfect fourth pair in the ascending minor thirds sequence of perfect fourth pairs (1-5; 6-3; b5-b2; b3-b7) makes 1-6-b5-b3, which is I diminished seventh. The group of the lower-pitched second notes of each perfect fourth pair in the descending minor thirds sequence of perfect fourth pairs (1-5; 6-3; b5-b2; b3-b7) makes b2-3-5-b7, which is bII diminished seventh and is also I7b9 no root.

AUGMENTED SCALE

Augmented Arpeggio and Scale Fingerings

Augmented arpeggios are a repeating interval pattern of major thirds. Any note in an augmented arpeggio can be the root. For any given position, the three fingerings below can represent augmented arpeggios in all keys. The numbers on the diagrams are finger numbers.

Augmented is commonly used as an altered V chord, as the second chord in chromatically descending minor (Am-G#Aug -Am7-Am6) or in the “Brazil” vamp: C-Caug-C6-Caug, D-Dm#5-Dm6-Dm#5.

Common Use of Augmented Arpeggios

chromatic descending minor

See more fingerings in “[Voice Leading](#)”/[Chromatic Descending Minor Library](#).

The “Brazil” vamp - [click to play video](#)

In the Antonio Carlos Jobim version of Ary Barroso’s “Brazil”, this vamp is used at 1:12.

Swing Eighthths
♩ = 180

The musical notation for the “Brazil” vamp is presented in 4/4 time with a tempo of 180 beats per minute (Swing Eighthths). The key signature is one sharp (F#), indicating D major. The notation is divided into three systems, each containing four measures. The first system features the chords D, D+, D6, and D. The second system features D+, D6, Em(add9), and Em(add9)#5. The third system features Em6, Em6, Em6, and Em6. Above each staff, guitar fretboard diagrams are provided for each chord, showing fingerings. Below each staff, a bass line is shown with fingerings for the bass player. The vamp concludes with a double bar line.

Augmented Triads and Diminished Seventh as Tension Chords

augmented tension chords

Augmented can also be used as a tension chord to resolve the #5 of the augmented to a II, IV or VI chord in the key of the augmented root. The II or VI may each be major or minor. The same rules can apply to a dominant (7th type) chord with a sharp five, but the augmented triad version is usually easier to hear.

Augmented scale is an augmented triad (any augmented triad tone can be the root) with a half step below each tone, essential two augmented triads a half step apart. With discrete rules of harmonic beat tension, the scale can be used in two ways: half/whole augmented with the tone centers on the lower tone of each chromatic pair and whole/half augmented with the tone centers on the upper tone of each chromatic pair. Also, one augmented scale of six notes includes all three major seventh arpeggios. Great possibilities, strong need for discrete rules so the listener can relate to known music.

diminished seventh tension chords

Diminished seventh chords also create tension. They can resolve to any chord with a root a half step above or a whole step below either of the four diminished seventh tones. It is well-worn. Augmented presents more opportunity for new music.

Whole Tone Scale

augmented subsets of whole tone scale

“b6” is an enharmonic numbering (a synonym) for “#5”. “1-3-#5” is an augmented triad and any of its notes can be a root. The remaining notes, “2-b5-b7” are also an augmented triad and either of the notes can be a root.

place the tones numbered "1" on the desired tone center

V7b9 arpeggio

On these diagrams, "5" is the root of V7b9 and is five of harmonic minor.

place the tones numbered "5" on the V7b9 root

7b9 no root is diminished seventh. The roots are on black. The remaining diminished seventh tones are on gray. In A minor, E7b9 no root can be named as either of these four diminished seventh chords: G#dim7, Bdim7, Ddim7, Fdim7. In the key of A minor, E7b9 is the V7b9 chord. VIIIdim7 in the key of A minor is the V7b9 chord with no root.

In using diminished seventh setup chords, think of the diminished seventh down a half step from the root of the target chord. This produces VIIIdim7, which is V7b9 no root, as explained above.

V7b9 arpeggio place the tones numbered "1" on the root of the V7b9 chord (5 of the key)

In-Position And Three-Note-Per-String Fingerings

Harmonic minor scale fingerings are numbered in reference to major sharp five scale fingerings in this course. Harmonic minor is as mode on the sixth step of major sharp five scale.

major sharp five and harmonic minor modes

see [All Scale-Tone Chords/Harmonic Minor Scale-Tone Chords](#)

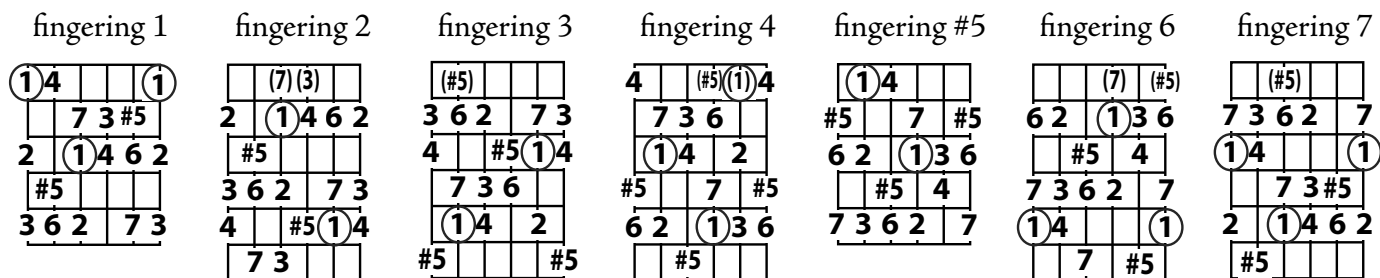

Harmonic minor is a mode on step six of major sharp five scale. If you know the modes of the major scale, thinking in major sharp five is a matter of altering one note in each mode. Note the descending number series of altered tones: major #5, Dorian #4, Phrygian natural 3 (raised from b3), Lydian #2, Mixolydian #1, Aeolian natural 7 (raised from b7 to produce harmonic minor) and Locrian natural 6.

mode names →	major #5	Dorian #4	Phrygian dominant (nat. 3)	Lydian #2	Mixolydian #1	Aeolian nat.7	Locrian nat.6
major #5 scale tones →	I	II	III	IV	#V	VI	VII
I major #5 chords	Ima9#5	IIIm13#11 or IIDim7	III7b9(/11)b13	IVma7/6(#11) or bVIDim7	#Vdim7	VIIm9(ma7)	VIIIm7b5(/11) or VIIIdim7
C ma#5 chords	Cma9/6#5	Dm13#11 or Ddim7	E7b9(/11)b13	Fma7/6(#11) or Fdim7	G#dim7	Am9(ma7)	Bm7b5(/11) or VIIIdim7
harmonic minor tones →	bIII	IV	V	bVI	VII	I	II
VI har. min. chords	bIIIma9#5	IVm13#11 or IVdim7	V7b9(/11)b13	bVIIma7/6(#11) or bVIDim7	VIIIdim7	Im9(ma7)	IIIm7b5(/11) or IIDim7
A harmonic minor chords	Cma9/6#5	Dm13#11 or Ddim7	E7b9(/11)b13	Fma7/6(#11) or Fdim7	G#dim7	Am9(ma7)	Bm7b5(/11) or VIIIdim7

The fingerings are numbered according to the scale number of lowest major sharp five scale tone fingered with the index finger on the sixth string. The harmonic minor tone center is scale tone six of major sharp five scale, so when the lowest pitch on the sixth string is the harmonic minor tone center ("A" for A harmonic minor), it is fingering 6, since that note is the sixth step of C major sharp five.

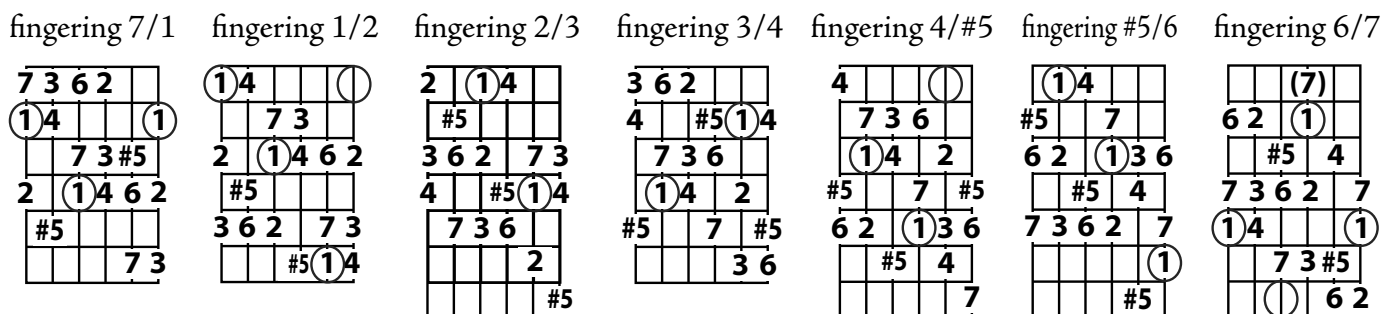

Other fingerings called “three-note-per-string” fingerings use slightly different rules regarding playing in position. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

in-position major sharp five scale fingerings, numbered by scale tones

The in-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall. Here are the three-note-per-string major scale fingerings:

three-note-per-string major sharp five scale fingerings, numbered by scale tones

Three-note-per-string major scale fingerings shown above combine in-position fingerings, and are numbered accordingly. Fingering 1/2 combines in-position fingerings 1 and 2; fingering 2/3 combines in-position fingerings 2 and 3; and so on. in-position fingerings, numbered by fingers

MELODIC MINOR SCALE FINGERINGS

Also see [Melodic Minor Scale Summary/Fingerings](#).

In-Position And Three-Note-Per-String Fingerings

Melodic minor is used in jazz as a major scale with a flatted third. In classical music, it ascends as a major scale with a flatted third, but descends as Aeolian, like a major scale with flat three, flat six and flat seven. Melodic minor scale fingerings are numbered in this course according to the number of the lowest note of the parent major scale fingered with the index finger on the sixth string. The parent major scale for C melodic minor is C major. Other fingerings called “three-note-per-string” major scale fingerings use slightly different rules regarding playing in position. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

in-position fingerings

The in-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall.

three-note-per-string fingerings

Three-note-per-string major scale fingerings shown below combine in-position fingerings, and are numbered accordingly. Fingering 1/2 combines in-position fingerings 1 and 2; fingering 2/b3 combines in-position fingerings 2 and b3; and so on.

full-fretboard melodic minor scale

PLAYING OVER PROGRESSIONS WITH MELODIC MINOR

Melodic minor mode are commonly used in jazz.

1-melodic minor

Melodic minor is often substituted for Aeolian to make a key I minor sixth chord, as in Miles Davis' *Summertime*, the A section of *I Love Paris*, *Birk's Works*, *Get Out of Town*, *Besame Mucho*, *My Heart Belongs to Daddy*.

2-Dorian Flat Two

This mode works well for a IIm7 chord (Dm7) progressing to V7#5 (G7#5), since the sharp five of the V chord (the "D#" note) is the flat two (D# = Eb) in the key of the II chord.

3-Phrygian Flat One

Phrygian flat one can be a secondary root chord scale to sound the maj7#5 chord or arpeggio on the flatted third of Im9(ma7).

4-Lydian Dominant (Lydian Flat Seven)

This mode is the classic flat five substitute, used to resolve its dominant 7, 9 or 13 with #11 to a target down a half step.

5-Mixolydian Flat Six

A perfect scale when you want a natural fifth in the bass and a sharp five in the treble, using the flat six of this mode as a sharp five, yet still having a natural five available for the bass.

6-Aeolian Flat Five

Aeolian flat five can be a chord scale on the third of a IV7 chord or a darkened version of an Aeolian minor seventh chord.

7-Super Locrian (Locrian flat four)

Super Locrian is the super altered mode for the "Swiss Army" chord V7b5#5b9#9. It can also be a chord scale for a secondary root on the third of a Mixolydian flat six chord like V7#5 or V9b13.

Modal Application of Melodic Minor Scale in Improvising

parent melodic minor scale

Arpeggios can be built with the melodic minor scale fingerings below by playing every other note in ascending or descending numerical order, making tertian thirds. One set of tertian thirds is in black, another in grey. Fingering numbers below (i.e. "fingering 3") are determined in relation to the numbering of scale fingerings, since melodic minor is major scale with flat three. See [Major Scale Fingering/Major Scale Fingering Numbers](#).

Lydian dominant: typically used with "1" on bII of the target chord

Lydian dominant is built on the fourth step of melodic minor. The harmonized Lydian dominant scale is the 13#11 chord. It is tones 4-6-1-b3-5-7-2 of melodic minor or 1-3-5-b7-2-#4-6 of Lydian dominant.

super Locrian: typically used with its tone center ("1") on V of the target chord

Augmented tones are shown with a black circled background

using Lydian dominant as a flat five substitute

The mode on the fourth step of melodic minor, Lydian dominant, is used as a flat five substitute. See [Modes/Modes of Four Heptatonic Scales/Melodic Minor Modes](#). Also see [Substitution/Flat Five Substitute](#). For a C chord target, the flat five substitute for G7, the V7 or C is Db7. The parent melodic minor scale used to create a Lydian dominant scale (13#11) is on the flatted sixth of the target. For a C major target, the parent melodic minor scale would be Ab melodic minor. The mode on the fourth step of the Ab melodic minor scale, Db Lydian dominant (and its harmonized chord Db13#11) would be used in place of G7. It is simpler way to think of the flat as a bII of the target (“Db” is bII of “C”). See this [Lydian dominant resolution video](#).

the super Locrian super-altered V chord

The mode on the seventh step of melodic minor, super Locrian can create a seventh chord with sharp five, flat five, sharp nine or flat nine, using any or all of these alterations. The harmonized scale could be called a “Swiss-army” seventh chord, because of its ability to use all of the altered tones commonly applied to seventh chords in dissonant jazz.

Lydian dominant and super Locrian are modes of the same melodic minor scale, so they are scalar synonyms. Also, the harmonized versions of each of them are synonyms. For the Ab melodic minor scale, Db Lydian dominant makes the chord Db13#11 as a harmonized scale built on the fourth step. G super Locrian built on the seventh step of Ab melodic minor makes the chord G7#5b5#9b9 as a harmonized scale. Since those two chords each use all seven notes of the Ab melodic minor scale, they are chord synonyms. Db13#11 is a chord synonym of G7#5b5#9b9.

The seventh chord basis of Db13#11 is the Db7 chord. It could also be based on Db7b5, since the #11 in the Db13#11 chord is equivalent to a flat five. Db7 is a synonym of Gb7b5. To bring out a different chord, the 7#5 chord part of super Locrian is featured below.

Melodic Minor Cadences

Melodic minor cadences work better to major targets. Of the minor modes, melodic minor resolves best to Phrygian, like in Night In Tunisia.

The best melodic resolutions use a bII triad tone (root, third or fifth of the bII of target chord), resolving to a triad tone of the target chord. When the duration is long enough to communicate this three-chord cadence, use these melodic minor “Im9(ma7)” arpeggios to “cadence to the melodic minor IV triad as a setup chord, then to the target triad (shown as major, but could be minor). If the duration is shorter, you may want to only use the bII of target (Db7 to C).

the bVIIm(ma9) bII9 I cadence

Build Abm9(ma9) arpeggios with Ab melodic minor by ascending up and down 1-b3-5-7-9 in order.
Build Db13#11 arpeggios with Db Lydian dominant by ascending up and down 1-3-5-b7-2-#4-6 in order.

HARMONIC MAJOR SCALE FINGERINGS

In-Position And Three-Note-Per-String Fingerings

Major flat six is the most rare of the four usable heptatonic scales. Major flat six scale fingerings are numbered in this course according to the number of lowest note of the parent major scale fingered with the index finger on the sixth string. The parent major scale for C harmonic major is C major.

Other fingerings called “three-note-per-string” major scale fingerings use slightly different rules regarding playing in position. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the second string.

in-position fingerings

The in-position fingerings lend themselves to playing chord and arpeggio structures within the scale. Melody is largely an ornamentation of chord tones, so these fingerings work well to improvise. Three-note-per-string fingerings are better suited to playing scale runs, since picking can be the same for every string and the finger patterns are more repetitious and easier to recall.

three-note-per-string fingerings

Three-note-per-string major scale fingerings shown below combine in-position fingerings, and are numbered accordingly. Fingering 1/2 combines in-position fingerings 1 and 2; fingering 2/3 combines in-position fingerings 2 and 3; and so on.

PLAYING OVER PROGRESSIONS WITH HARMONIC MAJOR

Interesting Exotic Modes

Harmonic major presents these notable modes: harmonic major, Dorian flat five, Phrygian flat four (“Super Phrygian”) Lydian diminished, Mixolydian flat two, Aeolian flat one and Locrian diminished (Locrian double-flat seven).

1-Harmonic Major

When chord progressions in a major key include a IV minor chord, a I diminished chord or a #IV diminished seventh chord, the harmonic major key scale is useful.

2-Dorian Flat Five

Bar six of a jazz blues often uses a #IVdim7 chord. Key Dorian flat five scale provides all the notes of the #IVdim7 and makes a variation of the common key Dorian scale. Dorian flat five scale also works well in the Benny Goodman/Charlie Christian tradition of playing in a major key with key diminished sounds.

3-Super Phrygian (Phrygian Flat Four)

Super Phrygian is a useful variation of super Locrian, the scale for super-altered chords with sharp five, flat five, sharp nine, flat nine. Super Phrygian has a natural five, but still has the flat nine and sharp nine like super Locrian. Like super Locrian, super Phrygian has a sharp five, but also a natural five, so the sharp five is called “flat thirteen”.

4-Lydian Diminished (Lydian Flat Three)

George Russell’s 1953 book “The Lydian Chromatic Concept” explored use of the Lydian diminished scale, which is Lydian with a flatted third. This mode is based on the m9(ma7) chord and has a sharp four, which can act as a lower chromatic embellishment for the fifth.

5-Mixolydian Flat Two

A perfect scale for 13b9 chords with flat nine in the bass.

b6-Aeolian Flat One

Aeolian flat one can act as a secondary root chord scale for a super Phrygian chord. Using C harmonic major as an example, consider playing the key of A minor, using an E7b9#9 chord as a V chord with the E super Phrygian chord scale. Then consider using A Aeolian flat one as a secondary root chord scale on the E7b9#9, where the flat four of E super Phrygian functions as a major third (the “G#” note). A Aeolian flat one is based on an “Ab” note, enharmonically the same as the “G” which functions as the major third of the E7b9#9. Then you can improvise on the rest of the progression with A Aeolian and use A Aeolian flat one on the E7b9#9 chord.

7-Locrian Diminished (Locrian double-flat seven)

Where harmonic minor combine the notes of I minor and VII diminished, Locrian diminished (Locrian double-flat seven) can combine the notes of I major and VII diminished. This should come as no surprise, since the parent scale of Locrian diminished, harmonic major (1-2-3-4-5-b6-7) has the same formula as harmonic minor (1-2-b3-4-5-b6-7) except harmonic major has a natural three.

Tones 7-2-4-b6 of either scale (harmonic minor or harmonic major) make a diminished seventh chord. Tones 1-3-5 of harmonic major make a major triad arpeggio or chord, which can be used as a tension release preceding movement to the tension in VII dim7. Compare the melodic use of Am-Bdim7 with that of C-Bdim7.

ALTERED V CHORD TONES IN COMMON

All of these scales have $b6 - 5 - 4 - b3$ in the target key (I). Each of the three scales shown add three notes in the target key to make a seven tone scale based on "5" of the target and each implying types of V chords that lead to a I chord target. Harmonic minor adds $7 - 1 - 2$. Phrygian flat one adds $b1 (7) - b7 - 2$. Aeolian flat one adds $b7 - b1 (7) - 2$. See the [Scale Ambiguity](#) chapter to apply each of these as V type setup chords for a I target chord. All the diagrams below are numbered in terms of the target key, except for the target key row, which shows finger numbers. The examples use a "C" target chord, so the circled note is always "C".

EVOLUTION OF THE GUITAR

Predessors of the Guitar

chang

harp

lyre

lute

chitarra battente

ancient predecessors of the guitar

The guitar evolved from harps and lyres, then later from short-necked lutes and the chitarra battente. The chang was invented in Persia around 4000 BCE. Lyres and harps are similar. The harp has a triangular shape, while the lyre is “U-shaped”. The earliest harps and lyres were found in Sumer, 3500 BCE. The earliest lutes shown on Mesopotamian pottery around 3100 BC are long-necked instruments. Long-necked lutes include the banjo and sitar. Some ancient images discovered in the Middle East from before 1000 BC appear to show frets.

the most recent predecessors of the guitar

The Moors, who conquered Andalusia and other parts of Spain in the eighth century introduced the lute or oud (ahh-oooud). The standard tuning for the guitar, EADGBE, evolved from the Italian folk guitar, or chitarra battente, which was tuned A-D-G-B-E from its largest fifth to smallest first string. When six-string guitars were introduced, a low E string was added. By the early 19th century, most guitars were tuned to a variation of standard contemporary tuning, with the strings tuned to E, A, D, F# (or G), B, and E.

Contemporary Guitar Tuning

With standard contemporary guitar tuning, the intervals from each string to the next smaller string are a perfect fourth, except the third (G) to the second (B) are a major third. With this tuning, you can tune by comparing the pitch of each string at the fifth fret to the next smaller string open. The reason for the change in interval between the third and second string was to make the notes of a chord easier to fret, with a lesser span. Without the major third exception in tuning these major barre chords would be nearly impossible to fret: these E, A and C-form major chords (demonstrate) would be have to be fretted like this (re-tune and demonstrate).

TWO CATEGORIES OF FINGERING INSTEAD OF FIVE

Two Categories

See [Playing in Position/Two Categories of Octave Shapes](#).

Without the major third exception to tuning between the third and second strings, there would be about forty percent as many fretting patterns if you conceive fingerings in two categories instead of five (2/5 is forty percent).. Patterns in approximately an octave occur in two families, one with a low-numbered fretting finger on the root or tone center in the bass and another with a high-numbered on the root or tone center in the bass. Those with a low-numbered fretting finger on the root or tone center in the bass span the octave with a “forward slash” angle as viewed on a standard chord-style diagram. Those with a high-numbered fretting finger on the root or tone center in the bass span the octave with a “backward slash” angle as viewed on a standard chord-style diagram.

Five Categories

The traditional category of octave shapes (commonly called the “CAGED” system, better-named as the EDCAGE system) uses five categories of fingering. It should also be studied. Scales, melodies and arpeggios that span approximately an octave should also be conceived in the forward and backslash manner described above and elaborated in this study.

getting to the forty percent

This system of compensation for standard guitar tuning will get you closer to that forty percent. The compensation involves memorizing a pattern on the larger four strings and applying it to a string set that includes the second and or first string or vice-versa. Ascending a scale or arpeggio, notes on the smaller two strings have to be moved one fret toward the guitar body, since they are tuned relatively a half step flat to the four bass strings. Descending a scale or arpeggio, notes on the larger four strings have to be moved one fret toward the head of the guitar, since the four bass strings are tuned relatively a half step sharp to the two treble strings. The system will cover pentatonic scales, arpeggios, chords, and six, seven and eight-tone scales.

PENTATONIC SCALES

See “[Pentatonic Fingering](#)”/Locating Pentatonic Scales, Favored Pentatonic Fingering, Triads and Pentatonic Scales, Pentatonic Exercises. See “[Master Pentatonic and Major Scale Patterns](#)”/Pentatonic Lines.

Pentatonic Themes in Seven Octaves

minor pentatonic [pdf](#)/[videotab](#) [Youtube](#) [Spotify](#)

major pentatonic [pdf](#)/[videotab](#) [Youtube](#) [Spotify](#)

Outline of 22 Progressive, Accumulative Pentatonic Elements

Use the outline below and the corresponding [Youtube video](#) as a progressive checklist to confirm you know each of the 22 items. Learn them in order, so they will build an accumulative knowledge and ability.

1. **the A major scale on the sixth string by numbers, letters, frets and intervals**
2. **the A minor pentatonic scale (1-b3-4-5-b7) on the sixth string by numbers, letters, frets and intervals**

Play 1-2-3-4-5-6-7. “b3” is one fret toward the guitar head from 3. “b7” is one fret toward the guitar head from 7.

3. **pentatonic lines one through five and cycling up and down the fretboard**

Line 1 is a six-string barre. Line 4 is a six-string barré but has chromatically (by 1 fret) high 2. Lines 2, 3 and 5 each have one or more notes on the head side of a barre by one fret, which can be called “low”. Line 2 has strings “5-4-3 low”. Line 3 has “3 low”. Line 5 has “4 & 3 low”. Lines 2, 3 and 5 are shaped like a four-finger open-position “G” chord but have these deviations: line 2 has chromatically low strings 5-4-3 with a first-finger barré; line 3 has a three-string barre with the second finger, but chromatically low string 3 with the second finger; line 5 has a two-string bar with the second finger and chromatically low strings 4 and 3 barréd with the index finger.

4. **combine consecutive pairs of pentatonic lines to build minor pentatonic fingerings one through five**

Associate line 1 with fingering 1 and build fingering 1 with lines 1 and 2. Associate line 2 with fingering 2 and build fingering 2 with lines 2 and 3. Associate line 3 with fingering 3 and build fingering 3 with lines 3 and 4. Associate line 4 with fingering 4 and build fingering 4 with lines 4 and 5. Associate line 5 with fingering 5 and build fingering 5 with lines 5 and 1.

5. **pentatonic fingerings by finger number**

State each fingering in finger numbers, using the default fingering. Fingering 1 is 14-13-13-13-14-14. Fingering 2 is 24-14-14-13-24-24. Fingering 3 is 13 -13 -13 -low1,3 -14 -13. Fingering 4 is 14-14-13-13-24-14. Fingering 5 is 13 -13 -low1,3 -low1,3- 13 -13.

6. **memorize the pentatonic master pattern**

See [Master Pentatonic and Major Scale Patterns/The Master Pentatonic Scale Pattern](#) and [Pentatonic Lines](#).

7. **associate minor pentatonic's 1-b3-4-5-b7 respectively with pentatonic fingerings 1-2-3-4-5**

Ascend A minor pentatonic scale tones 1-b3-4-5-b7 on the sixth string and memorize their locations. Play them again and name them as fingerings 1-2-3-4-5.

To illustrate the association, (1) say "one" and hold up your first finger, (2) say "flat three" and hold up your first two fingers. (3) say "four" and hold up your first three fingers, (4) say "five" and hold up your first four fingers and (5) say "flat seven" and hold up all five fingers.

8. **play the C major scale on the sixth string by numbers, letters, frets and intervals**

Play the C major scale from "C" to "C" on the sixth string on an electric guitar.

9. **play the C major pentatonic scale on the sixth string by numbers, letters, frets and intervals**

Descend "1-7-6" in the C major scale on the sixth to find scale tone "6". Illustrate C major pentatonic tones "6-1-2-3-5-6" and "A-C-D-E-G-A" on the sixth string.

10. **associate C major pentatonic's 6-1-2-3-5 respectively with pentatonic fingerings 1-2-3-4-5**

Ascend C major pentatonic scale tones 6-1-2-3-5 on the sixth string. Play them again and name them as the lowest notes of fingerings 1-2-3-4-5.

11. **relative A minor pentatonic and C major pentatonic with tone center fingers**

See [Triads and Pentatonic Scales](#) below.

In fingering 1, the low-octave minor tone center is on the sixth string fretted with the index finger and the low-octave major tone center is fretted on the sixth string with the little finger. In fingering 4, the low-octave minor tone center is on the fifth string fretted with the index finger and the low-octave major tone center is fretted on the fifth string with the little finger. In fingering 2, the low-octave minor tone center is on the fourth string fretted with the index finger and the middle-octave major tone center is fretted on the fourth string with the little finger.

In fingering 5, the low-octave minor tone center is on the sixth string fretted with the little

finger and the low-octave major tone center is fretted on the fifth string with the index finger. In fingering 3, the low-octave minor tone center is on the fifth string fretted with the little finger and the low-octave major tone center is fretted on the fourth string with the index finger.

- 12. show the origin of the five octave shapes with open E, A, D, G and B moved up to the more common "C"**
- 13. octave "A" notes in E-D-C-A-G octave shapes correspond to A minor pentatonic scale fingerings one thru five**
- 14. octave "C" notes in G-E-D-C-A octave shapes correspond to C major pentatonic scale fingerings one thru five**
- 15. show the A minor chord(s), arpeggio and pentatonic scale in the E-D-C-A-G octave shapes**
- 16. show the C major chord(s), arpeggio and pentatonic scale in the G-E-D-C-A octave shapes**
- 17. show each of the five pentatonic fingerings with relative minor and major tone centers and chords**
- 18. show each octave shape with parallel A minor and parallel A major pentatonic fingerings and chords**

Notice that in each octave shape the major pentatonic fingering number is one higher than the minor. Major and minor pentatonic share tones 1 and 5. Minor adds b3-4-b7. Major adds 2-3-6.

- 19. show the seven octaves on the guitar**

Low-numbered finger in the bass on strings 6-5-4-3, then high-numbered finger in the bass on strings 6-5-4.

- 20. play minor pentatonic scale in each of the seven octaves with compensated fingering, then with themes**
- 21. play major pentatonic scale in each of the seven octaves with compensated fingering, then with themes**
- 22. "transpose" pentatonic fingerings**

Chromatically raise (move one fret toward the guitar body) the fifth of minor pentatonic or chromatically raise the third of major pentatonic to change the key up a perfect fourth or down a perfect fifth. Chromatically lower (move one fret toward the guitar head) the flatted third of minor pentatonic or chromatically lower the tone center of major pentatonic to change the key up a perfect fifth or down a perfect fourth.

Triads and Pentatonic Scales

relative major and minor arpeggios and pentatonic scales

Each pentatonic scale can be used with a major tone center or a minor tone center. The minor tone center is in a key three frets (a minor third) below the major tone center. See [Pentatonic Fingering](#). Here is that relationship for all keys:

major key	A	Bb	B	C	C#	Db	D	Eb	E	F	F#	Gb	G
minor key	F#m	Gm	G#m	Am	A#m	Bbm	Bm	Cm	C#m	Dm	D#m	Ebm	Em

Outline of 14 Progressive, Accumulative Arpeggio Elements

1. the G major scale on the sixth string by numbers, letters, frets and intervals
2. Illustrate four triad arpeggio types linearly in G on the sixth string
3. show the origin of the five octave shapes
4. learn G major chords in five octave shapes, originated with open-position chords
5. expand each of the five movable G major chord shapes into arpeggios
6. show the three arcs of major chord tones
See [Note Sets, Structure and Design/Triad Arcs](#)
7. learn G minor chords in five octave shapes, originated with open-position chords
8. expand the five movable minor chord shapes into arpeggios
9. show the three arcs of G minor chord tones
See [Note Sets, Structure and Design/Triad Arcs](#)
10. Illustrate six ninth arpeggio types linearly in G on the sixth string
11. show the seven octaves on the guitar
12. play major, minor, diminished and augmented arpeggios in each of the seven octaves with compensation
See [Arpeggios in the Seven-Octave Forward and Back Slash System/Triad Arpeggios](#)
13. play six types of ninth arpeggios in each of the seven octaves with compensation
See [Arpeggios in the Seven-Octave Forward and Back Slash System/Ninth Arpeggios](#)
14. build any ninth arpeggio by recalling the formula

Play the in-position reference major scale with any necessary altered tones from “1” to “9” (high 1 is 8, high 2 is 9). Come down to 8 and count it as “1” as you ascend the higher octave. In some of the fingerings, you may to add one to three notes in the bass on the sixth string to include “1”. Play in swing eighths with the odd numbered tones louder, then go back and play only the on-beat emphasized 1-3-5-7-9 tones (with any necessary alterations).
ma9=1-3-5-7-9, 9=1-3-5-b7-9, m9=1-b3-5-b7-9, m9b5=1-b3-b5-b7-9, 7b9=1-3-5-b7-b9, m9(ma7)=1-b3-5-7-9. See [Reference Major Scale Fingerings](#) below.

Reference Major Scale Fingerings

Reach options are minimized in these versions to make the fingerings simpler for building arpeggios. More reach options are shown in the [Pentatonic Scales](#) section, where head-reaches are more practical.

seven in-position reference major scale fingerings, numbered by scale tones

Major scale fingerings are numbered in this course according to the number of lowest note fingered with the index finger on the sixth string. The seven in-position fingerings are shown below. Scale tones are numbered. The scale-tone numbers shown in parenthesis are options, where the same note can be fingered on the an alternate string.

fingering 1 3 index reaches	fingering 2 2 pinky reaches	fingering 3 no reaches	fingering 4 2 index reaches	fingering 5 4 index reaches	fingering 6 1 pinky reach	fingering 7 no reaches

in-position reference major scale fingerings by finger number

“1” is the index finger, “2” is the middle finger, “3” is the ring finger and “4” is the little finger.

fingering 1 3 index reaches	fingering 2 2 pinky reaches	fingering 3 no reaches	fingering 4 2 index reaches	fingering 5 4 index reaches	fingering 6 1 pinky reach	fingering 7 no reaches

Major scale fingerings can also be conceived in all twelve positions for any particular key. See [“Playing in Position”/In-Position Major Scale Fingerings](#).

Major Scale Mode (Mood) Cycles

expressive modes in order of darkening

In the tables of diagrams below, the modes are shown in a darkening sequence from left to right. See the earlier section [The Expressive Use of Modes](#). As you progress through each row from left to right, first the sharp four in Lydian mode is made natural, lowering it chromatically (by a half step). This darkens the mood from the exceedingly bright mood of Lydian to the commonplace bright mood of major (Ionian) mode. Continuing to the right in each row flatted tones are accumulated in the order b7-b3-b6-b2-b5 (a numeric order of fourths), progressively darkening the mood. This succession of darkening modes is a common basis of composition, arranging and improvisation.

Hypothetical Ninths for Melody Only

The Phrygian m7b9 (IIIIm7b9) and Locrian m7b5b9 (VIIIm7b5b9) are not currently accepted as chords. You won't find them in any of the forty or so fake books in circulation. They can be used melodically, however, as long as the flat nine is not sustained, but used as a neighboring tone or passing tone.

Major Ninth Arpeggios in Seven Octaves-forward & back slash

(Dominant) Ninth Arpeggios in Seven Octaves-forward & back slash

Minor Ninth Arpeggios in Seven Octaves-forward & back slash

Minor Ninth Arpeggios in Seven Octaves-forward & back slash

Tempo: $\text{♩} = 160$

Diagram 1 (VII): E form, low. Fingering: 1 (1), 2 (3), 3 (4).

Diagram 2 (II): A form, middle. Fingering: 1 (1), 2 (1), 3 (3), 4 (4).

Diagram 3 (X): D form, middle. Fingering: 1 (1), 2 (2), 3 (3), 4 (4).

Diagram 4 (V): G form, high. Fingering: 1 (1), 2 (1), 3 (3), 4 (4).

Diagram 5 (XII): C form, middle. Fingering: 1 (1), 2 (2), 3 (4), 4 (4).

Diagram 6 (VIII): E form, high. Fingering: 1 (1), 2 (1), 3 (3), 4 (4).

The piece consists of three systems of music, each with a treble and bass staff. The first system (measures 1-8) features a Cm⁹ arpeggio in the treble and a bass line with notes 8, 11, 10, 11, 8, 10, 11, 8. The second system (measures 9-16) continues the Cm⁹ arpeggio in the treble and the bass line with notes 10, 13, 12, 11, 10, 13, 12, 11. The third system (measures 17-24) continues the Cm⁹ arpeggio in the treble and the bass line with notes 15, 13, 12, 15, 13, 12, 15, 13.

TRIAD CHORD AND ARPEGGIO FINGERING

In a Way, Triads Are the Tonal Basis of All Chords

Larger chords can be conceived more easily if you can see their triad subsets. It is important to know triad structures. See [“Note Sets, Structure and Design”/Triad Arcs](#), [“Comping Design”/EDCAGE Movable Triads and Arcs](#), [“Scale-Tone Arpeggios and Pentatonics”/Building Triad Arcs](#), [“Full-Fretboard Chord Tones”/The Major and Minor Chord Tone Arcs](#), [“Full-Fretboard Major Scale Visualization”/Major Scale-Tone Triad Arcs](#), [“Phrases Built with Core Melody and Filler”/Harmonic Clusters](#), [“Double Stops”/Triad Arcs](#), [“All Scale-Tone Chords”/Arc-Based Triads with Roots in Fourths](#), [“Pedal Point Chord Progression”/Modal Triad Improv and Cluster Playing](#), [“Scale Ambiguity”/Ambiguous Scales For Dominant Chords](#)/augmented arpeggio fingerings.

DAY IN THE LIFE

Day in the Life “Ahh” Bridge Arpeggio Exercise - 1-2-3

rules of construction

In sixteenth notes, begin on the lowest chord tone and ascend three chord tones (including the first note), making the “1-2-3” fragment pattern. Play this pattern a total of five times, except change the last note to an eighth note. See Fragment Patterns/[1-2-3 With Anti-Metric Grouping](#).

The exercise is divided into three systems, each for a different chord: C, G, and D. Each system includes a treble clef staff with a key signature of one sharp (F#), a bass clef staff, and a set of fingerings (1-5) for both hands. The exercise is played in 4/4 time and consists of five measures per system. The first measure of each system is a half note, and the remaining four measures are eighth notes. The exercise ends with a double bar line and a repeat sign.

System 1: C

Measure 1: C (half note)
 Measure 2: C (eighth), E (eighth), G (eighth), A (eighth)
 Measure 3: C (eighth), E (eighth), G (eighth), A (eighth)
 Measure 4: C (eighth), E (eighth), G (eighth), A (eighth)
 Measure 5: C (eighth), E (eighth), G (eighth), A (eighth)

System 2: G

Measure 1: G (half note)
 Measure 2: G (eighth), B (eighth), D (eighth), E (eighth)
 Measure 3: G (eighth), B (eighth), D (eighth), E (eighth)
 Measure 4: G (eighth), B (eighth), D (eighth), E (eighth)
 Measure 5: G (eighth), B (eighth), D (eighth), E (eighth)

System 3: D

Measure 1: D (half note)
 Measure 2: D (eighth), F# (eighth), A (eighth), B (eighth)
 Measure 3: D (eighth), F# (eighth), A (eighth), B (eighth)
 Measure 4: D (eighth), F# (eighth), A (eighth), B (eighth)
 Measure 5: D (eighth), F# (eighth), A (eighth), B (eighth)

Day in the Life “Ahh” Bridge Arpeggio Exercise - 3-2-1

rules of construction

In sixteenth notes, begin on the highest chord tone and descend three chord tones (including the first note), making the “3-2-1” fragment pattern. Play this pattern a total of five times, except change the last note to an eighth note. See [Fragment Patterns/1-2-3 With Anti-Metric Grouping](#) (3-2-1 with anti-metric grouping is shown there as well).

The exercise is presented in three systems, each for a different chord: C, G, and D. Each system shows a treble clef staff with a melodic line of sixteenth notes, a bass clef staff with a bass line, and a set of fingerings (1-5) for both hands. The exercise is in 4/4 time and uses a key signature of one sharp (F#).

System 1: Chord C

Melodic line (treble clef): C5 (quarter), B4 (quarter), A4 (quarter), G4 (quarter), F#4 (quarter), E4 (quarter).
 Bass line (bass clef): C4 (quarter), B3 (quarter), A3 (quarter), G3 (quarter), F#3 (quarter), E3 (quarter).
 Fingerings: Treble (4 1 3 1 3 3), Bass (8 3 5 3 5 5).

System 2: Chord G

Melodic line (treble clef): G4 (quarter), F#4 (quarter), E4 (quarter), D4 (quarter), C4 (quarter), B3 (quarter).
 Bass line (bass clef): G3 (quarter), F#3 (quarter), E3 (quarter), D3 (quarter), C3 (quarter), B2 (quarter).
 Fingerings: Treble (1 1 2 1 2 3), Bass (3 3 4 3 4 5).

System 3: Chord D

Melodic line (treble clef): D5 (quarter), C#5 (quarter), B4 (quarter), A4 (quarter), G4 (quarter), F#4 (quarter).
 Bass line (bass clef): D4 (quarter), C#4 (quarter), B3 (quarter), A3 (quarter), G3 (quarter), F#3 (quarter).
 Fingerings: Treble (4 1 2 1 2 1), Bass (5 2 3 2 3 2).

Day in the Life "Ahh" Bridge Arpeggio Exercise - 1-2-3-4

rules of construction

In sixteenth notes, begin on the lowest chord tone and ascend four chord tones (including the first note), making the "1-2-3-4" fragment pattern. Play this pattern a total of four times for each chord, beginning on the lowest reachable (in position) chord tone for each chord. See [Fragment Patterns/1-2-3-4 With Anti-Metric Grouping](#),

The exercise is divided into three systems, each for a different chord: C, G, and D. Each system shows a treble clef staff with a key signature of one sharp (F#) and a 4/4 time signature. Below the staff are three lines of tablature labeled T, A, and B. The notation includes sixteenth notes and rests, with fingerings indicated by numbers 1-4. The exercise is divided into four measures per chord, with a repeat sign at the end of the third system.

System 1: Chord C

Measure 1: 2 1 3 3 1 3 3 3 3 3 3 1 3 3 1 4
 Measure 2: 2 1 4 4 1 3 3 2 3 3 2 1 3 2 1 1
 Measure 3: 3 2 5 5 2 5 5 5 5 5 5 3 5 3 8
 Measure 4: 3 2 5 5 2 5 5 5 5 5 4 5 4 3 3

System 2: Chord G

Measure 1: 1 4 4 3 4 4 3 1 4 3 1 2 3 1 2 1
 Measure 2: 4 3 1 1 3 1 1 1 1 1 1 4 1 1 4 4
 Measure 3: 2 5 5 4 5 5 4 2 5 4 2 3 4 2 3
 Measure 4: 5 4 2 2 4 2 2 2 2 2 2 5 2 2 5

System 3: Chord D

Measure 1: 3 1 1 4 1 1 4 3 1 4 2 3 4 2 3 2
 Measure 2: 4 2 2 6 2 2 6 4 2 6 4 5 6 4 5
 Measure 3: 4 2 2 6 2 2 6 4 2 6 4 5 6 4 5
 Measure 4: 4 2 2 6 2 2 6 4 2 6 4 5 6 4 5

Day in the Life "Ahh" Bridge Arpeggio Exercise - 4-3-2-1

rules of construction

In sixteenth notes, begin on one of the highest chord tones and descend four chord tones (including the first note), making the "4-3-2-1" fragment pattern. Play this pattern a total of four times for each chord. See [Fragment Patterns/1-2-3-4 With Anti-Metric Grouping](#) (4-3-2-1 with anti-metric grouping is shown there as well).

The exercise is divided into three systems, each for a different chord: C, G, and D. Each system includes a treble clef staff with a 4/4 time signature, a guitar tablature staff (T, A, B), and a sequence of numbers indicating the frets for each note.

System 1: C

Measure 1: 1 3 3 3 3 3 3 1 3 3 1 2 4 1 2 2

Measure 2: 1 1 2 3 1 2 3 3 2 3 3 1 4 4 1 2

System 2: G

Measure 3: 4 1 2 1 1 2 1 3 2 1 3 4 1 2 3 4

Measure 4: 4 4 1 1 4 1 1 1 1 1 1 3 1 1 3 4

System 3: D

Measure 5: 2 3 2 4 3 2 4 1 2 4 1 1 4 1 1 3

Measure 6: 0

Day in the Life “Ahh” Bridge Arpeggio Exercise - 1-2-3-4, 4-3-2-1

rules of construction

Play all sixteenth notes (except the ending note in bar six). Ascend four instances of the 1-2-3-4 fragment pattern in each of the bars 1, 3 and 5. In bars 2 and 4, descend four instances of the 4-3-2-1 fragment pattern. See Fragment Patterns/[1-2-3-4 With Anti-Metric Grouping](#) (4-3-2-1 with anti-metric grouping is shown there as well).

The musical score is divided into three systems, each representing a bar of music. The first system (bars 1 and 2) is in the key of C major. The second system (bars 3 and 4) is in the key of D major. The third system (bar 5) is in the key of E major. Each system includes a treble clef staff with a melodic line and a bass line with a bass clef. Fingerings are indicated by numbers 1-4 for the right hand and 2-5 for the left hand. The exercise is based on triads C, G, D, A, and E.

System 1 (Bars 1-2):

- Bar 1: Treble clef, C major. Melodic line: C4, D4, E4, F#4, G4, A4, B4, C5. Bass line: C3, D3, E3, F#3, G3, A3, B3, C4.
- Bar 2: Treble clef, C major. Melodic line: C5, B4, A4, G4, F#4, E4, D4, C4. Bass line: C4, B3, A3, G3, F#3, E3, D3, C3.

System 2 (Bars 3-4):

- Bar 3: Treble clef, D major. Melodic line: D4, E4, F#4, G4, A4, B4, C5, D5. Bass line: D3, E3, F#3, G3, A3, B3, C4, D4.
- Bar 4: Treble clef, D major. Melodic line: D5, C5, B4, A4, G4, F#4, E4, D4. Bass line: D4, C4, B3, A3, G3, F#3, E3, D3.

System 3 (Bar 5):

- Bar 5: Treble clef, E major. Melodic line: E4, F#4, G4, A4, B4, C5, D5, E5. Bass line: E3, F#3, G3, A3, B3, C4, D4, E4.

Day in the Life “Ahh” Bridge Linear Arpeggio Exercise

rules of construction

Read and play the example first, then read the rules.

1. Use fretted notes only. Begin on the lowest octave root, unless there are two tones below it, in which case you should begin on the lowest tone.
2. Progress up the arpeggio to the highest tone in the position and back down to the lowest note in the position.
3. After reaching the lowest tone in the position, ascend the arpeggio until you complete sixteen note. If the last note would end up on the third string, as it would have with the arpeggios for the “A” and “E” chords, change direction to stay in close range of the bass note for the next arpeggio.
4. In the “D” chord, the last note would have been “A”, the same note that should start the “A” chord that follows. To avoid redundancy, change the last note to the next arpeggio tone above. The last note of the “D” chord was changed to the “D” note, rather than using the redundant “A” note.

The musical notation shows the following structure:

- System 1:** C and G chords. Treble clef staff with notes and guitar tablature with fret numbers. Fingerings are indicated by numbers 1-4.
- System 2:** D and A chords. Treble clef staff with notes and guitar tablature with fret numbers. Fingerings are indicated by numbers 1-4.
- System 3:** E chord. Treble clef staff with notes and guitar tablature with fret numbers. Fingerings are indicated by numbers 1-4.

Day in the Life "Ahh" Bridge - Arpeggios and Heptatonic Scales

Start each bar with the next lower chord tone in relation to the last note of the previous bar. On beat 1, ascend 1234 from a chord tone. On beat 2, ascend 1234 from the next higher chord tone, compared to beat 1. On beat 3, continue to the next higher chord tone in relation to the last note on beat 2 and descend the seven tone scale. Begin the fourth beat with a chord tone, skipping if necessary. Use the G major scale on the C chord, the D major on the G, D and A chords and the A major scale on E.

Measure 1 (C): Treble: 2 1 3 3 1 3 3 3 1 4 3 1 3 2 1 3; Bass: 3 2 5 5 2 5 5 5 3 7 5 3 5 4 2 5

Measure 2 (G): Treble: 3 3 2 1 3 2 1 1 1 3 2 1 3 2 1 3; Bass: 5 5 4 5 4 3 3 2 4 2 5 4 2 5

Measure 3 (D): Treble: 3 3 2 1 4 3 1 2 1 4 2 1 1 4 3 1; Bass: 5 5 4 2 5 4 2 3 5 3 2 2 5 4 2

Measure 4 (A): Treble: 3 1 1 1 1 1 1 4 4 2 1 4 1 3 1 4; Bass: 4 2 2 2 2 5 5 3 2 5 2 4 2 5

Measure 5 (E): Treble: 1 1 4 2 1 4 2 3 2 1 3 1 2 1 4 2; Bass: 2 2 6 4 2 6 4 5 4 2 5 3 4 2 6 4

Keep the range of the starting notes in each bar close, avoiding skips. On beat 1, ascend the 123 arpeggio fragment pattern, which will take 9 notes by the first note of beat 3. Starting on that ninth note, begin a 31 (three one) fragment pattern, descending from each chord tone. Use the G major scale on the C chord, the D major on the G, D and A chords and the A major scale on E.

Measure 6 (C): Treble: 1 3 3 3 3 3 3 3 1 3 4 1 3 3 1 2; Bass: 2 5 5 5 5 5 3 5 3 4

Measure 7 (G): Treble: 3 2 1 3 2 1 1 1 4 1 3 1 2 4 1 2; Bass: 5 4 4 3 3 3 7 3 5 2 3 5 3

Measure 8 (D): Treble: 3 1 2 1 2 1 2 1 4 1 2 4 1 2 4 1; Bass: 4 2 3 3 3 2 5 2 3 5 2 3 5 2

Measure 9 (A): Treble: 1 1 1 1 1 1 4 1 4 4 1 2 4 1 2 4 1; Bass: 2 2 2 2 5 2 5 5 2 3 5 2 3 5 2

Measure 10 (E): Treble: 1 4 2 4 2 3 2 3 2 3 1 2 4 1 2 3; Bass: 2 6 4 4 4 4 5 4 5 2 3 5 2 3 4

Keep the range of the starting notes in each bar close and in the upper octave, to fit the wide range of this design. Beginning on beat 1, descend the 321 fragment pattern three times, making 9 notes. Beginning with the ninth note, ascend the major scale with a pivot tone pattern that changes notes with the first and third notes on each beat. Use the G major scale on the C chord, the D major on the G, D and A chords and the A major scale on E.

Measure 11 (C): Treble: 4 1 3 1 3 3 3 3 3 3 1 3 2 3 3 3; Bass: 8 3 3 5 5 5 5 2 5 4 5 5

Measure 12 (G): Treble: 1 1 2 1 2 3 2 3 3 3 1 3 2 3 3 3; Bass: 3 3 3 4 4 5 4 5 5 2 5 5 5 5

Measure 13 (D): Treble: 1 2 1 2 1 3 1 2 3 3 1 3 2 3 3 3; Bass: 2 3 3 2 2 4 4 5 2 5 4 5 5

Measure 14 (A): Treble: 4 4 1 4 1 1 1 1 1 1 3 1 4 1 1 1; Bass: 5 5 2 5 2 2 2 2 2 4 2 5 2 2

Measure 15 (E): Treble: 3 4 3 4 3 1 3 1 2 2 4 2 1 2 2 2; Bass: 4 5 4 4 1 4 1 2 2 4 2 1 2 2

5

Black Magic Woman Arpeggio and Scale Exercise

rules of construction

Play through the exercise as you read the rules. Begin with the “D” note, the root of the Dm chord on the fifth string. For the remaining chords, start each bar with the next lower chord tone from the ending note of the previous bar that is low enough to fit the design that follows.

Ascend the first two sets of four eighth notes each with a 1-2-3-4 fragment pattern starting one chord tone higher. With the third set of four eighth notes, start one chord tone higher than the last note in the second set of four notes and descend the seven tone scale for eight notes.

Black Magic Woman Pivot Tone Arpeggio Exercise

The image displays a musical score for the song "The Sound of Silence" by Simon & Garfunkel. The score is written for guitar and bass, using a 4/4 time signature and a key signature of one flat (B-flat). The music is presented in three systems, each with a guitar staff (treble clef) and a corresponding bass staff (bass clef). The guitar staff includes a melody line with fingerings (1-4) and a chord progression (Dm, A, Gm). The bass staff includes a bass line with fingerings (1-5) and a chord progression (Dm, A, Gm). The score is divided into measures by vertical bar lines, and the key signature is indicated by a flat symbol on the B line of the guitar staff. The song title "The Sound of Silence" is written in a stylized font at the top of the page.

Black Magic Woman Pivot Arpeggio and Pivot Scale Exercise 2

The first system of the musical score for 'The Rose Tree' is in 4/4 time, featuring a treble clef and a key signature of one flat (B-flat). The melody is divided into two measures, each with a chord symbol above it: 'Dm' (D minor) and 'A' (A major). The melody consists of eighth and quarter notes. Below the staff, there are three rows of tablature: 'T' (Treble), 'A' (Alto), and 'B' (Bass). The 'B' row contains fret numbers (5, 5, 8, 5, 7, 5, 5) corresponding to the notes in the first measure. The 'A' and 'B' rows contain fret numbers (6, 5, 6, 7, 7, 5, 7, 8) corresponding to the notes in the second measure. The 'T' row is empty for the first measure and contains fret numbers (4, 4, 7, 4, 7, 4, 4) for the second measure.

HOTEL CALIFORNIA

Hotel California Arpeggio Exercise

The image displays a guitar arpeggio exercise for the song "Hotel California" in D major. It is organized into three systems, each with a treble clef staff, a guitar tablature staff (labeled T, A, B), and a sequence of fret numbers. The exercise is in 4/4 time and consists of 12 measures.

System 1 (Measures 1-3):

- Measure 1: Chord Bm. Fret numbers: 1 4 3 3 1 1 1 4 1 1 1 3 1 1 3 3.
- Measure 2: Chord F#. Fret numbers: 1 4 4 3 1 2 1 4 1 2 1 3 2 1 3 4.
- Measure 3: Chord A. Fret numbers: 1 4 3 3 2 1 1 4 1 1 2 3 1 2 3 3.

System 2 (Measures 4-6):

- Measure 4: Chord E. Fret numbers: 2 2 1 3 3 3 1 4 1 3 3 3 3 3 1.
- Measure 5: Chord G. Fret numbers: 3 1 1 3 1 2 1 4 1 2 1 3 2 1 3 4.
- Measure 6: Chord D. Fret numbers: 1 1 3 1 1 1 4 4 4 1 1 1 1 1 1 3.

System 3 (Measures 7-12):

- Measure 7: Chord Em. Fret numbers: 1 1 4 3 3 2 1 4 1 2 3 3 2 3 3 4.
- Measure 8: Chord F#. Fret numbers: 1 4 4 3 1 2 1 4 1 2 1 3 2 1 3 4.
- Measures 9-12: The exercise concludes with a final measure (measure 12) that is not explicitly labeled with a chord but follows the fret sequence: 1 4 4 3 1 2 1 4 1 2 1 3 2 1 3 4.

Hotel California Arpeggio Exercise - complex

This is a one-bar repeating pattern on arpeggios. There are four notes per beat. Start on a low note. Ascend six tones (inclusively). Descend two chord tones. Start the third beat up one chord tone from the last tone on the second beat and descend four chord tones. Start the fourth beat with the same note as the second note on the third beat, descend four notes inclusively.

One bar repeating pattern: up six, down two; continue up a chord tone, down four; begin down a chord tone in down from the note that began the third beat: down four

Hotel California Wide-Range Arpeggio Exercise

the first note of each bar is not on the diagram

Handwritten musical score for "Hotel California Wide-Range Arpeggio Exercise". The score is written in 4/4 time, with a tempo marking of ♩ = 100. The key signature is one sharp (F#), and the mode is B minor (Bm). The exercise consists of 16 measures, grouped into four sets of four measures each. Each measure contains a treble clef staff with a melodic line, a bass clef staff with a bass line, and a guitar fretboard diagram below. The fretboard diagrams are 6x6 grids showing fingerings for the notes in the arpeggio. The notes are: Bm (B, D, F#, A), F# (F#, A, C#, E), A (A, C#, E, G#), E (E, G#, B, D#), G (G, B, D, F#), D (D, F#, A, C#), Em (E, G, B, D), and F# (F#, A, C#, E). The score includes various musical notations such as slurs, ties, and dynamic markings. The fretboard diagrams are labeled with the chord name and the measure number. The score is written in a standard musical notation style, with a treble clef and a key signature of one sharp (F#). The tempo is marked as ♩ = 100. The exercise is a wide-range arpeggio exercise, meaning it covers a large range of the fretboard. The score is written in a standard musical notation style, with a treble clef and a key signature of one sharp (F#). The tempo is marked as ♩ = 100. The exercise is a wide-range arpeggio exercise, meaning it covers a large range of the fretboard.

PARENT SCALE

A *parent scale* is a reference scale from which a scale or mode was derived. Most commonly, a major scale is used as a parent scale. Any of the modes of the major scale would refer to that major scale (which was their source) as their parent scale. Other parent scales are *major #5*, *major b3* and *major b6*, each of which have seven modes like the major scale and are simple modifications of the major scale.

C major scale uses the notes C, D, E, F, G, A, B and C. Modes are constructed on each of the tones of the C major scale. The [Discovering the Modes of the C Major Scale](#) section of the [Modes](#) chapter demonstrates modes of the C major scale. Those modes all have the C major scale as their parent scale.

In the example below, play the C major scale from the sixth string to the first string. It will be the parent major scale. Now play the notes from “D” to “D”, followed by the D minor triad (three-note chord), to emphasize the chosen note as a focal point or main note. This establishes a new scale, “D Dorian”.

Follow the same procedure with “E” to “E” for E Phrygian, “F” to “F” for F Lydian, and so on. You have now experienced all the modes of the C major parent scale.

C major parent scale

D Dorian mode on "2" of the parent C major scale Dm E Phrygian mode on "2" of the parent C major scale Em

F Lydian mode on "4" of the parent C major scale F G Mixolydian mode on "5" of the parent C major scale G

A Aeolian mode on "6" of the parent C major scale Am B Locrian mode on "7" of the parent C major scale Bdim.

SPONTANEOUS MELODY AND JAZZ ARPEGGIOS

Sing As You Play Pentatonic

Practice singing as you play minor pentatonic on the first four strings until you can only gesture the notes (finger the notes without actually sounding them in air guitar fashion) and sing the right notes. Make sure you are singing the same pitch you are playing. Gradually play the notes softer and mute them until you are only gesturing them, vocally predicting their sound. Experiment and let your imagination tell you which notes to choose to elaborate the two bar melodic rhythm.

Learn the Jazz Arpeggios for Each Chord

Memorize the [Quadrant Arpeggios](#), [Ninth Arpeggios](#) and [Eleventh And Thirteenth Arpeggios](#) in [Prime Scales, Chords and Arpeggios](#).

VIm and I type arpeggios are very interchangeable. Most importantly, learn VIm11 and use it as a basis of to establish the minor key on VI or the major key on I. IIm and IV type arpeggios are very interchangeable also, so next learn IIm15 and use it on IIm type and IV type chords; IIm type arpeggios are largely usable on V type chords, but make the V sound sound suspended.

Five Modes Based on Each Major Scale Fingering

patterns in darkening and brightening

By playing a major scale from any particular numbered tone up and down an octave, a mode is created. “Modus” means “mood” in Greek. From two to two is Dorian, for example. Music is commonly composed in the modes on steps one, two, five and six. In each case, the piece of music is composed in such a manner that it sounds as if the piece would sound complete ending on a chord named after the chosen tone, such as a Dm chord with the C major scale establishing D Dorian.

The modes have various degrees of dark and bright moods. The order of modes in brightening order is 7-3-6-2-5-1-4. You would compare the modes in the same key, so “C”, for example is on “7” of one particular parent major scale (Db) would be compared to “C” on “3” of another parent major scale (Ab) and “6” of another (Eb) and so on.

As you progress through the brightening order of modes, some interesting patterns happen. To change each parent major scale to the next in the series, its fourth step would be sharpened. In regard to major scale fingerings (“4/5” is called “5” here), the brightening sequence is 7-3-6-2-5. See [Prime Scales, Chords and Arpeggios/Major Scale Fingerings](#).

The sequence of major scales for brightening modes is the cycle of fifths: F-C-G-D-A-E-B, or more completely Cb-Gb-Db-Ab-Eb-Bb-F-C-G-D-A-E-B-F#-C#.

In progressing through the darkening order of modes, each parent major scale changes to the next in the series by flattening its seventh step. In regard to major scale fingerings ("4/5" is called "5" here), the darkening sequence is 5-2-6-3-7. The sequence of major scales for darkening modes is the cycle of fourths (fifths in reverse order): C#-F#-B-E-A-D-G-C-F-Bb-Eb-Ab-Db-Gb-Cb.

parallel key modes and modal interchange

Parallel key modes is modal interchange on the same tone center. See [Modes/Modal Interchange \(Change of Mode\)](#).

parallel key modes on VI of parent major: VI Aeolian, VI Dorian, VI Mixolydian

Play from the sixth step to the sixth step of a major scale, such as from "G" to "G" in a Bb major scale. This will produce Aeolian mode (G Aeolian on the sixth of Bb major). Play some songs that use that mode.

on the sixth of the parent major scale, change Aeolian to Dorian

In relation to a G major scale, G Aeolian has flat three, flat six and flat seven. In any key, Aeolian has flat three, flat six and flat seven. Dorian has a natural six. In G Aeolian, the flat six is "Eb". By changing the "Eb" to "E" natural (not flat), the scale is changed to G Dorian.

next, change Dorian to Mixolydian

Compared to "G" major, G Aeolian has b3-b6-b7. G Dorian has b3-b7. G Mixolydian has only flat seven. G Aeolian has its tone center on the sixth of Bb major, which has Bb and Eb, otherwise all natural notes. G Dorian has its tone center on the second step of F major, which has only Bb. G Mixolydian has its tone center on the fifth step of C major, which has no sharps or flats.

parallel key modes on I of parent major: I major, I Mixolydian, I Dorian

On the first step of the parent major scale, change major to Mixolydian by flattening the seventh. This would change Bb major (Bb-C-D-Eb-F-G-A-Bb) to Bb Mixolydian (Bb-C-D-Eb-F-G-Ab-Bb), with "Ab" being the flattened seventh.

To further change the parent major scale to Dorian, you would flat the third as well. Bb major is Bb-C-D-Eb-F-G-A-Bb. Bb Mixolydian has a flattened seventh (Ab): Bb-C-D-Eb-F-G-Ab-Bb. Bb Dorian has a flattened seventh (Ab) and a flattened third (Db): Bb-C-Db-Eb-F-G-Ab-Bb.

ORDER OF STUDY FOR EACH MAJOR FAMILY

Examples are given for the C major family below, in parenthesis. For each major scale (C) family, play songs in the order listed below. See [the arpeggio](#) sections of the [Prime Scales, Chords and Arpeggios](#) chapter.

- ✦ Play songs in Aeolian (A) relative minor, based on VIm (Am) pentatonic and the VIm11 (Am11) arpeggio.
- ✦ In the same key as the Aeolian (A), play songs in Dorian (A Dorian), based on minor pentatonic and the VIm13 arpeggio.
- ✦ In the same key as the Aeolian (A), play songs in Mixolydian (A Mixolydian), based on minor pentatonic with a major third and the VI13 arpeggio.
- ✦ Play songs in major (C major), based on I (C) major pentatonic and the VIm11 (Am11) arpeggio (Ima9/6).
- ✦ In the same key as the major mode (C major), play songs in Mixolydian (C Mixolydian), based on major pentatonic and the I13 (C13) arpeggio.
- ^ In the same key as the major mode (C major), play songs in Dorian (C Dorian).

Relative Major and Minor Scales with Modes and Pentatonic Subsets

the pentatonic basis

Determine whether you want major or minor pentatonic. Major is happy, minor sad. You will then need to qualify the rest of the seven-tone (heptatonic) scale.

the elaboration to modes (seven-tone scales)

A parent major scale is the major scale that is being used as a resource to build another scale. Roman numerals (VI and I, etc.) in this discussion refer to the step of the parent major scale on which a mode (such as VI Aeolian) is built.

VI Minor pentatonic may be elaborated to VI Aeolian or VI Dorian. Particularly in blues-based music like rock, blues and jazz, Dorian is typically used as a darkening of Mixolydian in blues, making a major chord sound minor. See [Modes/Modes On I IV V Blues](#). By changing the flat of the minor pentatonic to natural three, you can change the minor pentatonic to dominant 7/11 pentatonic, a subset of Mixolydian mode. This is commonly used in blues, typically preceding three with flat three and including instances of flat three in the phrase to keep it bluesy.

Major (major 6/9) pentatonic can be elaborated to major (Ionian) mode or Mixolydian mode. By flattening the third, it can be changed to minor 6/9 pentatonic, which is a subset of Dorian.

fingering for relative major and minor scales with pentatonic subsets

This shows the layout of the relative major and minor families, starting in two pages with C major and A Aeolian. Notice the option (b3) blues option in dominant 7/11 with Mixolydian.

		minor pentatonic basis			major pentatonic basis

the last column on the right is III Phrygian dominant

It is the V chord in the key of VI Aeolian. A Aeolian is the key built on the sixth step of the C major scale. Thinking in the key of A Aeolian, E Phrygian dominant (E is III of C) is the V chord of A Aeolian. Phrygian dominant can also be called Phrygian major.

This complicates the tables a bit, but the III Phrygian major is important to pair with the VI Aeolian as its V chord. Notice the option (b3) blues option in dominant 7/11 with Phrygian dominant.

A major scale

The image displays the A major scale and its related chords in treble and bass clef. The scale is written in treble clef with a key signature of three sharps (F#, C#, G#). The scale is divided into four measures, each with a specific fingering and scale tones indicated below the notes. The chords are A, Bm, C#m, C# (F# harmonic minor), D, E, F#m, G#dim, and A, each with a specific fingering and scale tones indicated below the notes. The bass clef part is written in bass clef with a key signature of three sharps (F#, C#, G#). The bass clef part is divided into four measures, each with a specific fingering and scale tones indicated below the notes. The chords are A, Bm, C#m, C# (F# harmonic minor), D, E, F#m, G#dim, and A, each with a specific fingering and scale tones indicated below the notes.

MAJOR SCALE-TONE TRIAD ARPEGGIOS

Stepwise Major Scale-Tone Triads by Finger Number

Numbers on the diagram are fretting-hand fingers. Tone centers that name the parent major scale are shown with a circle on the outer perimeter of the circle. The chord roots are in stepwise order in black. Thirds and fifths are gray. Each row is a single major scale with each diagram in the row showing a chord built on a step of the scale, as numbered in roman numerals at the top of the columns.

MAJOR SCALE-TONE FULL-TERTIAN ARPEGGIOS

6 1 3 “Tertian” refers to a structure of thirds. In full-tertian arpeggios, each note is a scale tone third from the next. They are a continuous series of every-other-note, using the numbered cycle 1-3-5-7-2-4-6, repeat. They can build major scale-tone arpeggios constructed in thirds (every-other-note).

4 5

2 7

Each of these full-tertian arpeggios contains smaller arpeggios. For example, II^m13 ascends with major Each fingering contains two full-tertian arpeggios, one shown in black, the other in gray. From bass treble, the fingering below ascends 7-2-4-6-1-3-5-7-2 in black and ascends 1-3-5-7-2-4-6-1-3 in gray.

Each of these full-tertian arpeggios contain smaller arpeggios. For example, II^m13 ascends with major scale tones 2-4-6-1-3-5-7. Each three consecutive tones of 2-4-6-1-3-5-7-2-4 makes a triad. 2-4-6 is a II minor triad, 4-6-1 is a IV major triad, 6-1-3 is a VI minor triad, 1-3-5 is a I major triad and 3-5-7 is a III minor triad. Each four consecutive notes of 2-4-6-1-3-5-7-2-4-6 make a seventh chord. 2-4-6-1 is II^m7, 4-6-1-3 is a IV^{ma}7, 6-1-3-5 is a VI^m7 and 1-3-5-7 is I^{ma}7.

Each five consecutive notes of 2-4-6-1-3-5-7-2-4-6-1 makes a usable ninth chord *if* the ninth chord is currently acceptable to listeners. Five of the possibilities are acceptable. 2-4-6-1-3 is II^m9, 4-6-1-3-5 is IV^{ma}9, 6-1-3-5-7 is VI^m9, 1-3-5-7-2 makes I^{ma}9 and 5-7-2-4-6 makes V9. Building a ninth on the “3” (3-5-7-2-4), would result in III^m7b9, which is not currently an acceptable chord. Likewise, building a ninth on the “7” (7-2-4-6-1), would result in VII^m7b5b9, which is not currently an acceptable chord.

IIm15 and V13 arpeggios include the other tertian arpeggios

A IIm15 arpeggio includes all the notes of IIm13, IVma13#11, VIm11, Ima9, IIIm7 and V major. A V13 arpeggio includes all the notes of V15, VIIIm11b5b9, IIm9, IVma7 and VI minor. These two arpeggios, IIm15 and V13 include all the other usable major scale tone arpeggios built in third. So it makes sense to memorize their fingerings.

Making the II minor chord a hypothetical IIm15, where the root and the fifteenth is the same note two octaves apart, allows making the maximum subset chords. The V13 chord allows making the remaining major scale-tone tertian chords not part of the IIm15. VIIIm7b5b9 is a usable arpeggio, but not an acceptable chord. In the use of VIIIm7b5b9 as an arpeggio, the “b9” tone needs to resolve to its upper or lower neighbor (root or flatted third). See the table below.

IIm15 and V13 subset arpeggios

	on root	on third	on fifth	on seventh	on ninth	on eleventh
IIm15	IIm13	IVma13#11	VIm11	Ima9	IIIm7	V major
V13	V13	VIIIm11b5b9	IIm9	IVma7	VI minor	n/a

Using Full-Tertian in Composing and Improvising

See “[Commonality Chords](#)”, “[Substitution](#)” and “[Abbreviating and Elaborating Chord Progression](#)”.

Building Scale-Tone Arpeggios from Full Tertian

Ascend each of the arpeggios for fingering 7 in both “lowest full tertian” and “other full tertian with the limits shown below for each (IIIm7 is 3-5-7-2). Notice the *parent major scale* upper limit is “2” or “3” and the lower limit is most often thought of as II or V, sometimes VI.

scale-tone chord	numbers of parent	quantity
Ima9	1-3-5-7-2	5 notes
IIm13	2-4-6-1-3-5-7	7 notes

LFT-NLP lowest full tertian paired from next-lowest					
OFT-LP other full tertian paired from lowest					
OFT-NLP other full tertian paired from next-lowest					

Modal Series of Full-Tertian Arpeggios

uniform, optimized for in-position major scale fingerings (not three-note-per-string)

Each fingering progresses to the next at its right sharpening the fourth, equivalent to adding a sharp or removing a flat from the its signature. This goes through the modal series: 7-3-6-2-5-1-4; which is respectively Locrian, Phrygian, Aeolian, Dorian, Mixolydian, Ionian (major) and Lydian.

Each fingering progresses to the next at its left flattening the seventh, equivalent to adding a flat or removing a sharp from its key signature. This goes through the modal series: 4-1-5-2-6-3-7; , which is respectively Lydian, Ionian (major), Mixolydian, Dorian, Aeolian, Phrygian and Locrian.

Using the circled note as a reference point for Ionian (major scale), any fingering can be used for any mode and progress through the series. At either end of a row, it can continue from the opposite end.

MAJOR SCALE-TONE PENTATONIC SCALES

Stepwise Major Scale-Tone Modal Pentatonic Scales

These are numbered in the key of the pentatonic scale, not in the key of the parent scale. IIm pentatonic is numbered in relation to a major scale on "2" of the parent major scale shown in the "IIma pent" column. In the major scale on that note ("2" of the major scale in the IIma pent. column), three and seven had to be flatted to make the notes the same as in the major scale in the first column.

Scale-Tone Pentatonic Scales in Stepwise Order, Numbered By Parent Major Scale

These are numbered in the key of the parent major scale, not by the key of the pentatonic scale. Notice that the numbered tones are identical in all the diagrams in the same row. Only the location of the black-backs and gray-backs have been changed to show the triad in black and the pentatonic scale in black *and* gray on each diagram in the row. The order of major scale tones on which the pentatonic scales are built is stepwise (Ima pent., IIm pent., etc.).

C form parent							
A form parent							
G form parent							

Scale-Tone Pentatonic Scales in Perfect Fourth Order, Numbered By Parent Major Scale

These are numbered in the key of the parent scale, not by the key of the pentatonic scale. The numbered tones are identical in all the diagrams in the same row. Only the location of the black-backs and gray-backs have been changed to show the triad in black and the pentatonic scale in black *and* gray on each diagram in the row. The order of major scale tones on which the pentatonic scales are built is fourths, 7-3-6-5-1-4. Fourths is the most common order of chord root progression. In C major the triads with with root progression in perfect fourths is B diminished-E minor-A- minor-D minor-G major-C major-F major.

Pentatonic Subsets

Pentatonic (five-tone) scales can be subsets of (part of) many heptatonic(seven-tone) scales. As you can see in the previous section, [Major Scale-Tone Pentatonic Scales](#), minor pentatonic scale occurs in the major scale on steps two, three and six. Major pentatonic scale occurs in the major scale on steps one, four and five. Pentatonic scales can also be subset of either of the three usable modified major scales, major sharp five (with harmonic minor by putting the tone center on its sixth step), melodic minor and major flat six (also called harmonic major).

Choosing the Mode

The accompaniment part on which you are improvising or composing a part for will suggest which mode should be used. The modes used for the accompaniment and for the melody don't have to match. They are commonly mis-matched for bluesy or exotic purposes. See the chapters [Substitution](#), [Scale Ambiguity](#), [Modes](#) and [Melodically Superimposed Cadences](#).

Naming Pentatonic Scales with Chord Names

These pentatonic scales can establish chord sounds within a heptatonic scale, since pentatonic scales are a form of arpeggio and all notes of a pentatonic scale can be played at once to make a chord. In this sense, the pentatonic scales can use chord names, as I've done since the 1970's. Major pentatonic is major 6/9, minor pentatonic is minor 6/9, and so on. I will use chord name-style pentatonic names in the tables below.

Black-Backed and Grey-Backed Numbers on the Diagrams

In the diagrams in this section, the black-backed notes are triad tones. In most cases, they show the notes of the major or minor chord on which the pentatonic scale is based. The grey-backed notes show the two additional notes in each octave that complete the pentatonic scale. The remaining notes complete a mode of the major scale or a mode of another seven-tone scale.

Movable Scale Fingerings

The diagrams in this section (Modal Pentatonic Scales) are movable. That allows them to be played in any key. For the "[Major Scale Fingerings Used in This Section](#)" page, the circled notes on each diagram are octaves of the same note (in that diagram). Use the circled note on the largest string available to locate the note on the fretboard that you want to be the key. If you want to play the G major scale, make sure the circled note is on "G". The remaining pages in this section have black-backed and grey-backed fingerings, as explained above. Place the number "1" on the desired tone center. To play a G minor 7/11 pentatonic scale elaborated to G Aeolian, you would place the number "1" on "G" on the fretboard.

Major Scale Fingerings Used in This Section

see also [Modal Pentatonic Scales by Numbered Tone](#)

The modal fingerings in this section primarily use the major scale and altered major scale fingerings shown below on this page. The common altered major scales are melodic minor (major flat three) and major sharp five. The mode on the sixth step of major sharp five is harmonic minor.

The numbers on the diagrams below on this page are all *finger numbers*, not scale-tone numbers. For each of the various modes each of the fingerings below are applied, a particular note is used as the tone center and is shown circled, not necessarily the same circled note shown below on this page.

Modal Blues with Favored Pentatonic Scales and Modes

In using these scales on I-IV-V blues, you must use a scale with flat three on the IV chord, which could be minor pentatonic or major pentatonic with a flat three. Those same scales can be used on the I and V chords to darken the mood. Major pentatonic and minor pentatonic with natural three can be used on the I and V chords. Usually you should keep the mood dark by not using too much of scales with natural three. Blues rock primarily uses pentatonic scales. Jazz elaborates pentatonic to modes like Dorian and Mixolydian.

BUILDING TRIAD ARCS

In the arcs, “i” indicates a note gestured or fretted with the picking hand index finger and “m” indicates a note gestured or fretted with the picking hand middle finger. Notes can be fretted with both hands, then simultaneously strummed with the picking hand thumbnail.

MAJOR, HARMONIC MINOR AND MELODIC MINOR

By sharpening the fifth of a major scale and putting the tone center on the sixth, you create a harmonic minor scale with any major scale fingering. C major sharp five creates A harmonic minor. Please read [Application Of Harmonic Minor](#).

By flattening the third, any major scale fingering can be made into melodic minor. Be sure to read [Application Of Melodic Minor](#).

Read [Modes/Modes of Four Heptatonic Scales](#).

Major, Harmonic Minor And Melodic Minor Parent Scales

parent scale, key scale and chord scale

See Introduction to Improv/Using Scales and Chords in Improv/[Key Scales, Parent Scales and Chord Scales](#).

fingering numbers

The fingerings on the diagrams below are numbered according to the number of the lowest pitch on the sixth (largest) string. Fingering 3, for example has major scale tone “3” as its lowest pitch. That would be C major scale fingering 3 in the twelfth position, where the lowest pitch on the sixth string is “E”, the third step of the C major scale. Here are the seven in-position fingerings in numerical order:

harmonic minor is major sharp five with tone center on six

“D” Aeolian mode is an “F” major scale with the tone center on the sixth step, “D”. Likewise, “D” harmonic minor is a mode on the sixth step of “F” major sharp five scale. This is commonly done to change the III minor chord (Am in the F major scale) to III major or III7, so it progresses more strongly and dramatically to the Dm chord whose root is up a fourth. Changing a chord to a major or dominant seventh to progress its root up a fourth is called a secondary dominant (see [Secondary Dominant](#)). The Am chord is made into a secondary dominant A or A7 chord to progress more strongly to Dm.

melodic minor is major flat three

Major flat three is called melodic minor. The mode on its seventh step, super Locrian produces a “super altered” seventh chord with flat five, sharp five, sharp nine and flat nine. It is a “Swiss Army” altered seventh chord mode. Super Locrian is commonly used as an altered V of target chord.

The mode on the fourth step of melodic minor (melodic minor is major flat three) is Lydian dominant, commonly used as a flat five substitute, harmonized as a13#11 chord, which provides a bII of target chord. Db7 (Db13#11) is a bII of C and is a flat five substitute for G7 (or altered G7).

Major Scale Modified for Harmonic and Melodic Minor

fingering
number →

	1/2	2	3	4	6	7
major scale						
harmonic minor (major #5)						
melodic minor (major b3) "X" is target						

Modes IV, VI and VII of melodic minor are used in jazz, rather than melodic minor mode I. C melodic minor is typically not used in jazz in the key of C minor, but for the key of "E" where C is the flat six.

In playing major key blues, you typically flat the third on the IV chord, since IV7 used 4-6-1-b3 of the key scale. In common blues styles, you need to additionally flat the key scale seven for the IV chord to produce the familiar Dorian mode (b3 and b7), rather than the exotic jazz melodic minor with only flat three.

Initially, the most useful melodic minor mode is mode VI (Aeolian b5), applied as IV Aeolian b5 of the target chord.

Application of Harmonic Minor

First play harmonic minor in the key of the target. Just before C7, Cm7 or Cma7 (any target with a perfect fifth, not a flatted or sharped fifth) play C harmonic minor (same key as target). Once you are comfortable with that, start forming arpeggiated harmonic minor IIm7b5 V7b9 cadences (Dm7b5 G7b9 to C7, Cm7 or Cma7) with the scale and abstracting decorating the arpeggios with the scale.

Application of Melodic Minor

The mode on the sixth step of melodic minor is Aeolian flat five. Trust that for your target chord, IV Aeolian flat five works as a setup chord sound (F Aeolian flat five before C7, Cm7 or Cma7). This produces a familiar dark blues mood. Try it.

Get Aeolian flat five by playing a major scale with flat three and putting the tone center on six. They apply it as IV Aeolian flat five of your target chord (G Aeolian b5 for D7, Dm7 or Dma7, because G Aeolian b5 is IV Aeolian b5 of D).

Once you are comfortable using Aeolian flat five on the IV of your target, start thinking in other modes of melodic minor. The jazz basis of melodic minor is super Locrian as a super-altered setup chord on V of the target. Read [Melodically Superimposed Cadences/Melodic Minor Cadences](#).

Ninth Subsets of Harmonic Minor and Melodic Minor

Since ninths span more than an octave it can “overlap” a ninth arpeggio in another octave. One ninth arpeggio is shown in bold numbers, another in plain numbers, but all in gray-backed notes. The remaining numbers without grey backs are scale tones not in the arpeggio.

Phrygian major subset arpeggios (harmonic minor)

In using these as a setup chord, put the circled note on the fifth of the target chord (G7b9 for a C target). See [Target Chords and Setup Chords](#).

DEFINITIONS OF TERMS

The Major and Minor Chord Tone Arcs

A major scale is a repeating seven-note sequence, where the eighth note is given the same numbered or lettered name as the first note. In the key of "C", the major scale is C-D-E-F-G-A-B-C-D-E, etc. Each note in a major scale is two frets from the next (leaving an "empty" fret between them), except the third to fourth notes are one fret apart, and the seventh to eighth notes are one fret apart.

A major chord consists of the first, third and fifth steps of a major scale, played together. The notes of a chord may be repeated. A major chord can have two or more of each note. They also can be in lower or upper octaves. There are ways to specify the order of notes, which we will cover here.

Note structures repeat on the guitar every twelve frets. Major chord tones and minor chord tones can each be conceived in terms of three groups of notes, which I call *arcs*. With some difficulty, it is possible to fret each of the three arcs. They provide a quick visualization of the basis of chords, the major triad.

By flattening the third in the major chord tone arcs, the minor chord tone arcs are created.

major chord tone arcs

minor chord tone arcs

Visualize Notes, Then Finger

Rather than jumping back and forth with your focus, visualize where the notes of a chord are, then decide on the fingers, as two separate activities. In the long run, this take much less time.

This is especially effective when fingering chord progressions such as I IV I7 no third, where the root remains and the other two notes ascend twice in tandem. Another triad progression is the “six nine” voicing: I6/9 no fifth to I9 no root/no third, which is equivalent to VI minor to V minor (a minor chord built on the sixth step of a major scale down a whole step to a minor chord on the fifth step of a major scale).

Chord Inversions

Chord inversions are named according to which note is lowest in pitch. If the root is in the bass (the lowest pitch), a chord is in *root position*. If the third is in the bass, it is *first inversion*. The fifth in the bass is *second inversion*. With four note seventh chords, which have a root, third, fifth and seventh, the inversion names are the same but adding the *third inversion*, where the seventh is in the bass.

String Sets

A series of chords can often be played where many consecutive chords are played on the same strings. Often a rules of harmony can keep the notes on the same strings, such as four note seventh chords descending their fifths and sevenths while their root name ascends up a fourth from each chord to the next.

Another useful sequence can facilitate practicing the five common seventh chord types by staying on the same strings and making this sequence of alterations: begin with major seventh (1 3 5 7), flat the seven (7: 1-3-5-b7), also flat the third (m7: 1-b3-5-b7), also flat the fifth (m7b5: 1-b3-b5-b7), double flat the seventh (1-b3-b5-6).

Close and Open Voicing

With close voicing, the notes are as close together as possible in pitch. With three note triads, the three possibilities are (in ascending order) 1-3-5, 3-5-1 and 5-1-3. For open voiced chords on the guitar, modify each close voiced chord by moving the middle note up or down an octave. This produces another three possibilities (the same as the close voiced ones in reverse order) 1-5-3, 3-1-5 and 5-3-1.

Summertime Blues

13 E A B E

The image displays a musical score for the song "Summertime Blues" in 4/4 time, featuring a key signature of one sharp (F#). The score is written on a single staff with a treble clef. The melody consists of a series of eighth and quarter notes, with rests, over a sequence of four chords: E, A, B, and E. Below the staff, there are four columns of fretboard diagrams, each corresponding to a chord. Each diagram shows a 5-fret section of a guitar fretboard with fingerings indicated by numbers in circles. The diagrams are arranged in a grid, with four rows of diagrams for each chord. The first row of diagrams for each chord shows the basic triad and dyad fingerings. The subsequent rows show more complex fingerings, including barre techniques and double stops. The diagrams are designed to be used as a reference for developing solo lines over the chords.

OPEN-VOICED THREE-NOTE TRIADS

Major by String Set

Play down each column is root in bass (root position), third in bass (first inversion), then fifth in bass (second inversion).

Minor by String Set

Play down each column is root in bass (root position), third in bass (first inversion), then fifth in bass (second inversion).

MAJOR SCALE-TONE TRIADS CONSTRUCTED IN THIRDS

As a standard practice, chords are built with an every other note pattern, using the cycle of thirds: 1 3 5 7 2 4 6 1 3 5 etc. Three note chords, called triads use the following numbers:

roman name	I	II ^m	III ^m	IV	V	VI ^m	VII ^{dim}
scale tones	1-3-5	2-4-6	3-5-7	4-6-1	5-7-2	6-1-3	7-2-4
letter name	G	A ^m	B ^m	C	D	E ^m	F [#] dim.

Numbers below each diagram below are in the key of the chord, not in the key of "G", except of course for the "G" chord. The numbers in the second row of the table above, labeled "scale tones" are numbers in the key of "G".

In each case, a chord has the numbers as specified above in the row labeled "scale tones". In the first diagram in the first row of diagrams above, the first chord is "G" at the third fret. Look for 1-3-5 on the diagram at the right, where the circled note on the sixth string is "1". You will find a collection of the numbered tones 1-3-5 in the same configuration. From the sixth to first string (left to right), they read "1-5-1-3-5-1".

Then find 2-4-6 as shown for A^m as in the second diagram in the first row above, rooted also on 6. You should find it on the diagram at the right where "2" is on the sixth string, reading "2-6-2-4-6-2" from left to right.

EXPANDING TRIADS INTO PROGRESSIONS

Once you establish a set of [voice leading](#) rules for a triad, you can apply it to any triad. For example, if the third and fifth of any chord are raised one scale tone, it becomes the chord up a fourth.

I is 1-3-5, IV is 4-6-1. Conservative [voice leading](#) (preferring smaller interval movement) of this root movement up a fourth (I to IV) involves the third and the fifth moving up a scale tone:

I 1-3-5

IV 1-4-6

Each of the twelve instances of close-voiced three-note major triads and each of the eighteen open-voiced three-note major triads can be expanded into the I IV I7 progression, shown below.

I IV I7: 3-5, 4-6, 5-7 thirds with Pedal Point “1”

“I IV I7” indicates a I chord, IV chord, then I chord of a seventh quality (I7). Based on a major scale named after the root of the I chord, the chords use tone the following scale tones: I is 1-3-5, IV is 4-6-1 and I7 is 1-3-5-b7. It is typical in voicings (choices of notes to play) for this chord progression that the I7 chord is played without a third, making I7(no third), which can be written as I7n3.

See the chapter [Pedal Point Chord Progression/Thirds and Sixths with Pedal Point](#).

Orient the fingerings below by keeping “1” on the same note.

Three moves to four, then to five. Five moves to six, then to flat seven.

Read down the page through the sets of three chords in “root in bass versions”.

Read down the page through the sets of three chords in “third in bass versions”.

Read down the page through the sets of three chords in “fifth in bass versions”.

mixolydian I-IV-I7n3 (thirds or sixths ascend: “change-change”)

“I-IV-I7” indicates a I major chord, a IV major chord, then a I chord of a seventh quality (I7), without a third (I7n3). Based on a major scale named after the root of the I chord, the chords use tone the following scale tones: I is 1-3-5, IV is 4-6-1 and I7 no third is I-5-b7. Orient the fingerings below by keeping “1” on the same note. In I-IV-I7n3, three moves to four, then to five. Five moves to six, then to flat seven.

mixolydian I-IV-I7 no 3: close-voiced on string set 3-2-1

root in bass

root in bass

third in bass

fifth in bass

mixolydian I-IV-I7 no 3: close-voiced on string set 6-5-4

root in bass

third in bass

fifth in bass

The typical [voice leading](#) for this progression retains the root, moves the third and fifth up a step to the fourth and sixth, making a IV chord (IV is 4, 6, and 1). Next, the fourth and sixth each move up another step to the fifth and seventh, making a I7(no third) chord. The I7(no third) chord uses scale tones 1, 5 and 7.

The third and fifth are move parallel in thirds. It is effectively two notes harmonized in thirds over a pedal point. With inversions, the interval between the third and fifth may be a sixth or tenth.

The I IV I7 progression may be based on each of many seven tone scales. Each scale may use different versions of the numbers, such as b7 for Mixolydian, but the numbers remain the same. It is very useful to note the *changes of intervals* in the I IV I7 progression particular to each scale. In Mixolydian, for example (I IV I7), the two moving notes change interval each time they ascend. They change from I to IV. They change again from IV to Im7n3. In Dorian mode, they stay the same from Im to IV, then change from IV to Im7n3. Phrygian and Aeolian are identical, since the I, IV, I7 progression does not use scale tone two. Phrygian major is commonly usable, harmonic minor is not.

<u>mode</u>	<u>progression</u>	<u>movement of thirds in parent scale</u>
major (Ionian)	I, IV, Ima7n3	3 minor, 4 major, 5 major
Dorian	Im, IV, Im7n3	4 major, 5 major, 6 minor
Phrygian (same as Aeolian)	Im, IVm, Im7n3	5 major, 6 minor, 7 minor
Lydian	I, IV diminished, Ima7n3	6 minor, 7 minor, 1 major
Mixolydian	I, IV, I7n3	7 minor, 1 major, 2 minor
Aeolian (same as Phrygian)	Im, IVm, Im7n3	1 major, 2 minor, 3 minor
Locrian	I diminished, IVm, Im7b5n3	2 minor, 3 minor, 4 major
Phrygian major	I, IVm, I7n3	5 major, b6 major, b7 major

Six Nine: Vim Vm Triads with Pedal Point “1”

six nine: Vim, Vm over one

This becomes a sixth to ninth chord change, since VIm equals I6 no fifth and Vm equals I9 no root, no third. During a C7 chord, the two chord progression C6n5 to C9nrn3 can be represented by playing Am Gm.

C6n5 and C9nrn3 are respectively synonyms for Am and Gm.

Don't voice the note that is the ninth of the I9nrn3 too low. The voicing for the second chord in the example below doesn't do a good job of sounding a ninth chord.

Expressive Rhythm

- **Expressive Division of Time**
- **Rubato**
- **Ahead of the Beat, Behind the Beat , In the Pocket**
- **Degrees of Swing**
- **Loudness by Duration**
- **Tempo Fluxuations**
- **Articulations**

EXPRESSIVE DIVISION OF TIME

Division of time can be equal, by degree (percentage) of swing or on a time curve. As intervals of time, phrases, bars, beats and divisions of beats can be regularly or irregularly spaced. The bars and phrases may be of different durations.

By Section

Most commonly, songs are at the same tempo, in theory. When we depend on humans to keep the time regular, there are always at least slight deviations. Those deviations are not bad. With skilled musicians, the deviations in tempo usually have a dramatic purpose.

If a recording is made to a “click track”, it should be very consistent as to the tempo. Even click tracks, with modern software, can accelerate, decelerate or abruptly change the tempo. Most performances keep a static tempo. Some accelerate or decelerate the tempo.

Unlike classical music, pop music usually keeps a regular tempo and only makes changes at a two to one ratio. The song may double the tempo, predicting it by playing two notes per beat before the tempo change, then converting those half beats to whole beats. Conversely, a song may halve the tempo, predicting it by accenting the first of every two beats, then converting those accents to beats at half the original tempo.

By Bar

Tempos don't change much bar to bar, but gradual change of tempos sequences of bars can be gauged by noting a certain tempo at one particular bar and a gradual change to a different tempo at another particular bar. Usually such changes are linear or regular. They can be more “logarithmic” changes, where the *change* of tempo is progressively faster or slower. Changing tempo during four bars and making the change happen more toward the end of the four bars builds excitement, for example.

By Beat and Beat Division

Beats are usually evenly spaced. Exceptionally, continuous sequences of faster notes, two or more divisions per beat are often compressed in time, played faster toward the beginning of the period in which they occur, leaving a phrase gap before the next group. This is most often done when the notes are slurred together and/or played legato (“in one breath”). Eight notes during a bar, would evenly divide to 12.5% if a bar per. They might be played faster to leave a 5% “phrase break” at the end. This is done all the time, but not everyone is aware of it.

Dividing the beat into two parts is called “straight” (straight eighths when an eighth note is half a beat) when divided precisely in half. Dividing the beat to a long note of two-thirds of a beat and a short note of one-third of a beat is called “regular swing”. See [Degrees of Swing](#), below.

RUBATO

Rubato is rhythmic independence between melody and accompaniment. It can use a phrase curve, bar curve, beat curve or combinations. Curves can accelerate, decelerate or be free-form with “drawn” acceleration and/or deceleration. Imagine a tempo accelerator pedal. Based on it’s latin root *rubato* time is *stolen* time.

During a beat, the overall period of time may remain the same as other beats, yet some of the notes may conceptually accelerate or decelerate, giving or borrowing time from the remainder of the beat. You could also say part of the beat is compressed and part of the beat is expanded yet still totaling one beat.

Compressed Beat Divisions

See [By Beat and Beat Division](#) in the previous section.

Groups of Short Durations

Like slurred groups, pairs of sixteenths or other groups of short durations at the end of a beat are compressed. Again, this is done to provide a tiny break before the next beat.

“AHEAD OF THE BEAT”, “BEHIND THE BEAT” AND “IN THE POCKET”

Playing “ahead of the beat” is playing all of the notes consistently early. Playing “behind the beat” is playing all of the notes consistently late. These deviations from playing “in the pocket” (perfectly in time) are usually slight and subtle.

One or more instruments play before or after the beat established by another instrument. Like with degrees of swing, just being aware of these concepts can make you much more effective in interacting with other musicians.

Ahead of the Beat Feels Anxious

Bluegrass, up-tempo jazz, jump blues, swing blues, bebop, punk, new wave and ska are typically anxious and often played ahead of the beat.

Behind the Beat Feels Relaxed

Funk, reggae, ragtime, swing era jazz, slow and medium tempo jazz and slow blues are typically relaxed and often played behind the beat.

YouTube Examples

Look up each of these three terms on YouTube and you’ll find an explosion of examples (it makes me want to play ahead of the beat!).

DEGREES OF SWING

Most of us have heard of swing eighths. You may have “light swing” and “heavy swing”. These all refer to the division of a beat into two unequal parts. We are not machines.

We may intend on dividing each beat into one note of two-thirds of a beat and another of one-third of a beat. If we recorded the performance with that intended “regular swing” of two-thirds and one-third and viewed the waveform in a timeline from left to right on a computer screen with vertical lines showing the beginning of each beat, we would find some irregularities. If you zoomed in far enough, you would see that every note has a unique duration and that the intended two-thirds and one-third didn’t exactly happen. If most listeners would perceive the beat division as two-thirds and one-third, we did fine. That’s what matters, the listener’s perception not the scientific precision.

Swing can divide the beat into two parts with the first part anywhere from over 50% to 75% of the beat. If you are aware of this variability of swing and human imperfection, you can adjust what you play to match what bandmates are playing and what listeners expect. It is a great subject to keep in mind.

Metronomes that can express from 50% to 75% swing include Dr. Betotte, for Mac, iPhone or iPad and the swingmetronome.com website.

LOUDNESS BY DURATION

Long durations are louder, short durations softer. This strengthens the effect of the longer notes, which are more important and conversely de-emphasizes the less important shorter notes. Exceptions are staccato syncopated notes (particularly at the end of a phrase) that give the music punch. Loud staccato syncopated notes are prevalent in bebop.

[link to video](#) (“>” is an accent mark)

TEMPO FLUCTUATIONS

Sections with short note durations are often faster in tempo, with adjoining sections with long note durations slower in tempo with a pause between. Beethoven: “sensitivity has its own pulse”.

ARTICULATIONS

[link to video](#)

The image displays three staves of musical notation illustrating various articulation and phrasing techniques:

- Staff 1:** Shows four measures. The first measure is labeled "staccato" and contains four eighth notes. The second measure is labeled "tenuto" and contains four eighth notes. The third measure is labeled "legato" and contains a sixteenth-note scale. The fourth measure is labeled "portato" and contains a sixteenth-note scale.
- Staff 2:** Starts with a measure labeled "5 portato" containing a sixteenth-note scale. This is followed by three measures, each containing a single eighth note.
- Staff 3:** Starts with a measure labeled "9" containing a quarter note. This is followed by a measure labeled "fermata" containing a quarter note with a fermata symbol. This is followed by a measure labeled "short fermata" containing a quarter note with a short fermata symbol. This is followed by a measure labeled "long fermata" containing a quarter note with a long fermata symbol. This is followed by a measure labeled "accent" containing a quarter note with an accent symbol. This is followed by a measure labeled "marcato" containing a quarter note with a marcato symbol.

Duration

staccato

Notes written with a dot above or below the note head are played approximately half their written value.

tenuto

Notes written with a short horizontal line above or below the note head are played for their full value, or even longer, where a note can borrow time from the note after it and thus shorten the duration note that follows. This is what swing does, for example, it lengthens the note on the beat and shortens the note on the offbeat.

legato

Legato should not be confused with tenuto. Legato is indicated with the word, not a mark.

portato (mezzo staccato)

Is legato with the notes slightly detached. They are played one breath, but with articulation of each note. They can be:

a group of staccato notes embraced by a slur, or

marked with both tenuto (horizontal line above or below) and staccato (dot above or below)

fermata

A note with a half circle and inner dot written above or below its note heads is played for a long duration, at the discretion of the performer or conductor.

Accent

accent

Indicated with a right angle bracket (>) above or below their note heads are accented notes to be played more loudly.

marcato

A note with a wedge (^) above or below its note head has a strong accent.

Metric Phrasing

METER AND PHRASING

Meter

Meter is the measurement of time. It is the conceptual division of time into regular periods, so they can be counted and so the beginnings of the periods can be predicted by groups of musicians and listeners. The periods are sections, phrases, bars, beats and the divisions of beats.

One of the cast members in Greek plays is said to have established a regular pulse by stomping his foot with a anklet of bells, loud enough so the cast could hear it to establish regular intervals in the lines of speech they were reciting in the plays. This became the “beat” in modern music. The beats are usually grouped regularly, most commonly in sets of four beats, but frequently also in three, six or twelve.

The groups of beats are called bars. Beats can be divided into regular parts, usually into two, three or four parts per beat. On the micro scale, bars are usually grouped in multiples of two, making phrases of two or four beats. On the larger scale, bars are grouped into larger sections like verses, and choruses in multiples of four beats, making eight, twelve, sixteen, twenty-four or thirty-two bar sections.

Phrasing

After establishing the mood, story and feel of a piece of music, you should divide the sections into phrases. This will help you to deliver the music to the listener in understandable parts. Rhythmically, your phrasing shows a relationship to the accompaniment, but doesn't have to match it exactly. In fact its independence from the accompaniment can give the music depth and character. See [Expressive Rhythm](#) and [Building Sections With Phrases](#).

PHRASE START POINTS

Phrases can start before, on or after the first beat of a bar. When they start before, they can be thought of as a pickup. When they start after the first beat of a bar, they usually have the effect of responding to an event on the first beat of the bar, in statement and response fashion.

Vary Phrase Start Points

A common flaw in the phrasing of a novice improviser is to start all the phrases the same way. Every phrase starting before the beat, or every phrase starting after the beat. It's understandable. If not coached on the subject, they are focusing on the other aspects of their improv and don't necessarily anticipate the monotony of starting all the phrases in the same manner.

pattern the phrase start points

Divide your sections into phrases, such as dividing a twelve-bar blues into three four bar phrases. Next, decide on a pattern of phrase start points, such as “before, before, on”, meaning start the first two four bar phrases each before the first beat of their first bar, then starting the last phrase on the first beat of its first bar.

This makes the music more interesting and can do things like bringing attention to the end of the twelve-bar section by changing the phrase start point of the last phrase.

Pickups: Starting the Phrase Before the First Beat

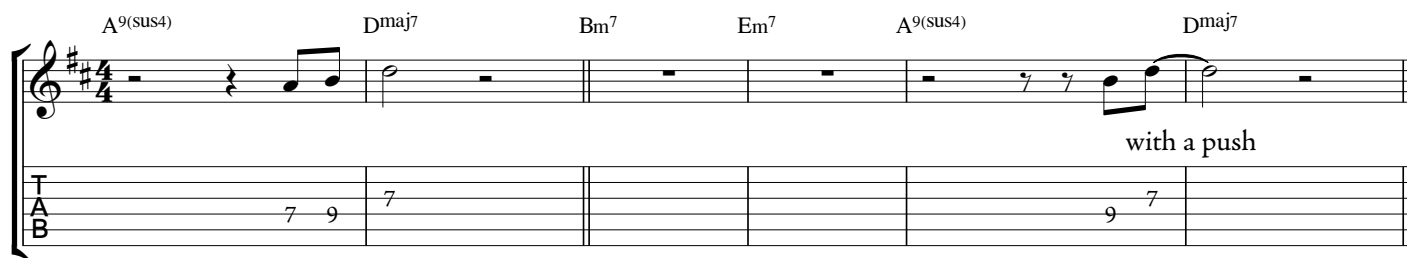

push versions

A *push* starts on the last division of the last beat before beat one, such as the “and of four”. It can also occur before other beats, or even before an upbeat with a sixteenth note on the second quarter of the beat before the third quarter. See [Rhythmic Words and Comping/Hearing Pickups and Pushes](#) and [Rhythmic Words and Comping/Comping Rhythms/Varying Rhythm/push](#).

one eighth-note pickup

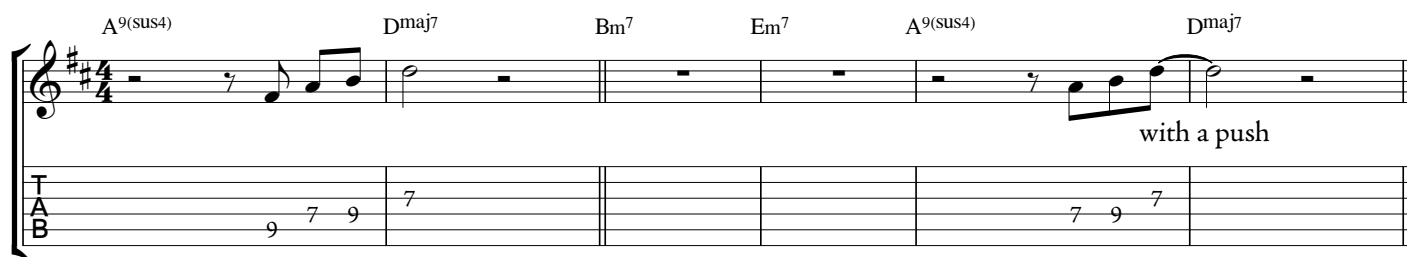

with a push

two eighth-note pickup

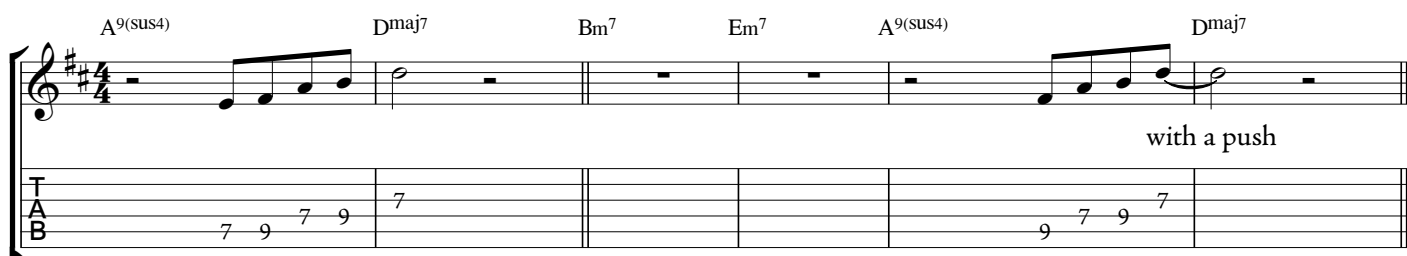

Two eighth-note pickup. The notation shows a treble staff with a key signature of one sharp (F#) and a 4/4 time signature. The first measure contains a quarter rest followed by two eighth notes (F#4 and A4). The second measure contains a half note (B4). The third and fourth measures contain whole rests. The fifth measure contains a quarter rest followed by two eighth notes (B4 and D5). The sixth measure contains a half note (E5). The seventh measure contains a whole rest. The eighth measure contains a quarter rest followed by two eighth notes (F#5 and A5). The ninth measure contains a half note (B5). The tenth measure contains a whole rest. The eleventh measure contains a quarter rest followed by two eighth notes (B5 and D6). The twelfth measure contains a half note (E6). The thirteenth measure contains a whole rest. The fourteenth measure contains a quarter rest followed by two eighth notes (F#6 and A6). The fifteenth measure contains a half note (B6). The sixteenth measure contains a whole rest. The notation is labeled with chords: A⁹(sus4) for measures 1-2, Dmaj7 for measures 3-4, Bm7 for measures 5-6, Em7 for measures 7-8, A⁹(sus4) for measures 9-10, Dmaj7 for measures 11-12, Bm7 for measures 13-14, Em7 for measures 15-16, A⁹(sus4) for measures 17-18, and Dmaj7 for measures 19-20. The text "with a push" is written below the final measure. The bass staff shows the fret positions: 7 9 for measures 1-2, 7 for measures 3-4, 9 7 for measures 17-18, and 7 for measures 19-20.

three eighth-note pickup

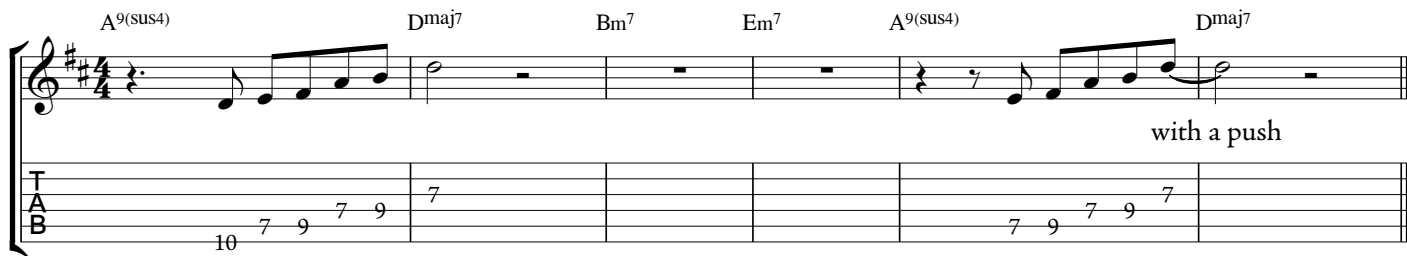

Three eighth-note pickup. The notation shows a treble staff with a key signature of one sharp (F#) and a 4/4 time signature. The first measure contains a quarter rest followed by three eighth notes (F#4, A4, and B4). The second measure contains a half note (C5). The third and fourth measures contain whole rests. The fifth measure contains a quarter rest followed by three eighth notes (C5, D5, and E5). The sixth measure contains a half note (F#5). The seventh measure contains a whole rest. The eighth measure contains a quarter rest followed by three eighth notes (F#5, G5, and A5). The ninth measure contains a half note (B5). The tenth measure contains a whole rest. The eleventh measure contains a quarter rest followed by three eighth notes (B5, C6, and D6). The twelfth measure contains a half note (E6). The thirteenth measure contains a whole rest. The fourteenth measure contains a quarter rest followed by three eighth notes (E6, F#6, and G6). The fifteenth measure contains a half note (A6). The sixteenth measure contains a whole rest. The notation is labeled with chords: A⁹(sus4) for measures 1-2, Dmaj7 for measures 3-4, Bm7 for measures 5-6, Em7 for measures 7-8, A⁹(sus4) for measures 9-10, Dmaj7 for measures 11-12, Bm7 for measures 13-14, Em7 for measures 15-16, A⁹(sus4) for measures 17-18, and Dmaj7 for measures 19-20. The text "with a push" is written below the final measure. The bass staff shows the fret positions: 9 7 9 for measures 1-2, 7 for measures 3-4, 7 9 7 for measures 17-18, and 7 for measures 19-20.

four eighth-note pickup

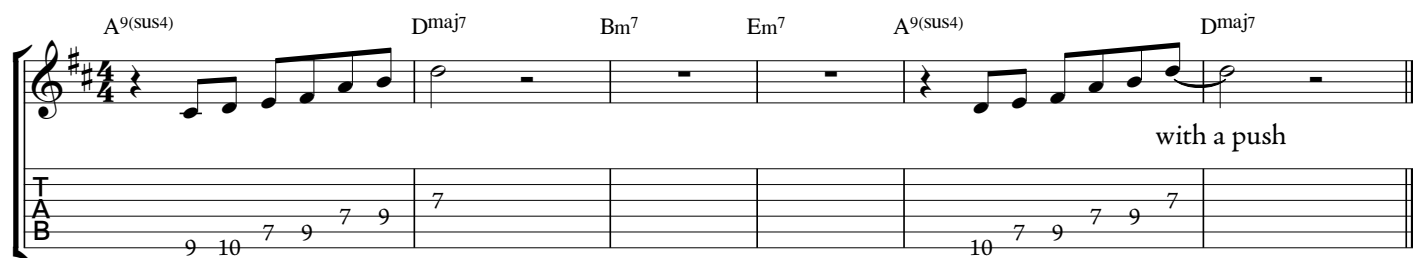

Four eighth-note pickup. The notation shows a treble staff with a key signature of one sharp (F#) and a 4/4 time signature. The first measure contains a quarter rest followed by four eighth notes (F#4, A4, B4, and C5). The second measure contains a half note (D5). The third and fourth measures contain whole rests. The fifth measure contains a quarter rest followed by four eighth notes (D5, E5, F#5, and G5). The sixth measure contains a half note (A5). The seventh measure contains a whole rest. The eighth measure contains a quarter rest followed by four eighth notes (A5, B5, C6, and D6). The ninth measure contains a half note (E6). The tenth measure contains a whole rest. The eleventh measure contains a quarter rest followed by four eighth notes (E6, F#6, G6, and A6). The twelfth measure contains a half note (B6). The thirteenth measure contains a whole rest. The fourteenth measure contains a quarter rest followed by four eighth notes (B6, C7, D7, and E7). The fifteenth measure contains a half note (F#7). The sixteenth measure contains a whole rest. The notation is labeled with chords: A⁹(sus4) for measures 1-2, Dmaj7 for measures 3-4, Bm7 for measures 5-6, Em7 for measures 7-8, A⁹(sus4) for measures 9-10, Dmaj7 for measures 11-12, Bm7 for measures 13-14, Em7 for measures 15-16, A⁹(sus4) for measures 17-18, and Dmaj7 for measures 19-20. The text "with a push" is written below the final measure. The bass staff shows the fret positions: 7 9 7 9 for measures 1-2, 7 for measures 3-4, 9 7 9 7 for measures 17-18, and 7 for measures 19-20.

five eighth-note pickup

Five eighth-note pickup. The notation shows a treble staff with a key signature of one sharp (F#) and a 4/4 time signature. The first measure contains a quarter rest followed by five eighth notes (F#4, A4, B4, C5, and D5). The second measure contains a half note (E5). The third and fourth measures contain whole rests. The fifth measure contains a quarter rest followed by five eighth notes (E5, F#5, G5, A5, and B5). The sixth measure contains a half note (C6). The seventh measure contains a whole rest. The eighth measure contains a quarter rest followed by five eighth notes (C6, D6, E6, F#6, and G6). The ninth measure contains a half note (A6). The tenth measure contains a whole rest. The eleventh measure contains a quarter rest followed by five eighth notes (A6, B6, C7, D7, and E7). The twelfth measure contains a half note (F#7). The thirteenth measure contains a whole rest. The fourteenth measure contains a quarter rest followed by five eighth notes (F#7, G7, A7, B7, and C8). The fifteenth measure contains a half note (D8). The sixteenth measure contains a whole rest. The notation is labeled with chords: A⁹(sus4) for measures 1-2, Dmaj7 for measures 3-4, Bm7 for measures 5-6, Em7 for measures 7-8, A⁹(sus4) for measures 9-10, Dmaj7 for measures 11-12, Bm7 for measures 13-14, Em7 for measures 15-16, A⁹(sus4) for measures 17-18, and Dmaj7 for measures 19-20. The text "with a push" is written below the final measure. The bass staff shows the fret positions: 10 7 9 7 9 for measures 1-2, 7 for measures 3-4, 7 9 7 9 7 for measures 17-18, and 7 for measures 19-20.

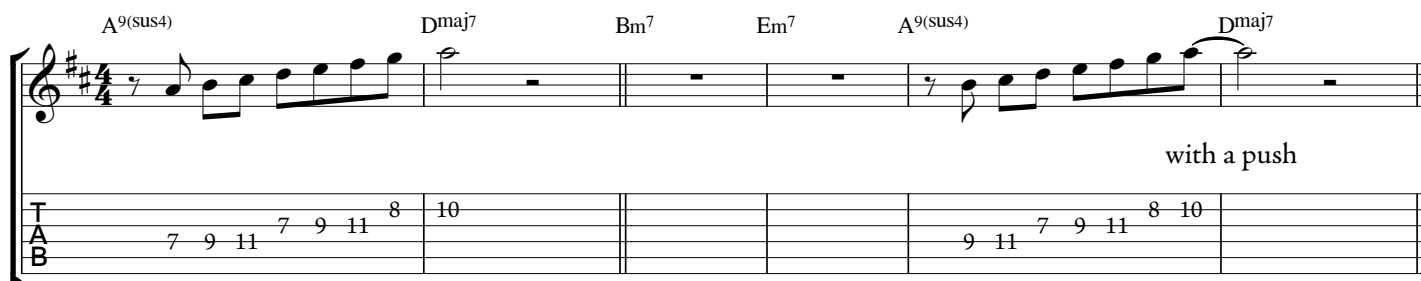

six eighth-note pickup

Chord progression: A⁹(sus4), Dmaj7, Bm7, Em7, A⁹(sus4), Dmaj7. The notation shows a six-eighth-note pickup in the first measure of the A⁹(sus4) chord, followed by a half-note pickup in the Dmaj7 chord. The final measure of the A⁹(sus4) chord is marked "with a push".

Tab: 9 10 7 9 7 9 7 10 7 9 7 9 7

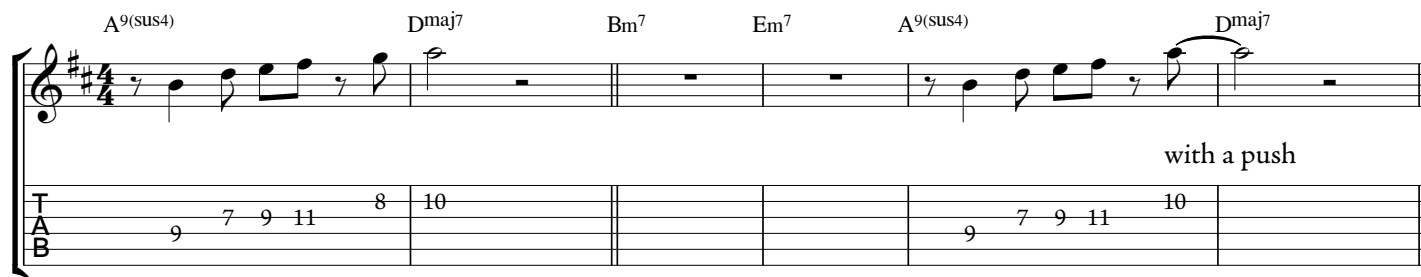

seven eighth-note pickup

Chord progression: A⁹(sus4), Dmaj7, Bm7, Em7, A⁹(sus4), Dmaj7. The notation shows a seven-eighth-note pickup in the first measure of the A⁹(sus4) chord, followed by a half-note pickup in the Dmaj7 chord. The final measure of the A⁹(sus4) chord is marked "with a push".

Tab: 7 9 11 7 9 11 8 10 9 11 7 9 11 8 10

pickups with irregular rhythm

Chord progression: A⁹(sus4), Dmaj7, Bm7, Em7, A⁹(sus4), Dmaj7. The notation shows a pickup with an irregular rhythm in the first measure of the A⁹(sus4) chord, followed by a half-note pickup in the Dmaj7 chord. The final measure of the A⁹(sus4) chord is marked "with a push".

Tab: 9 7 9 11 8 10 9 7 9 11 10

RHYTHMIC DISPLACEMENT

By conceiving a phrase with a particular start point, then moving the entire phrase earlier or later in time without changing the durations of the individual notes (nor the entire phrase), you are rhythmically displacing the phrase. Imagine a phrase written on a computer with software, where you can “cut and paste” the content. Write a phrase in the software that starts on the first beat. Copy it to the “clipboard”. Paste it to a new “blank” region on the *fourth* beat, instead. Play the phrase both ways with some clear indication of where first beat is, like an accented chord on the first beat. Usually the phrase will sound quite different.

Beat Groups

As music listeners, we are very conditioned to hear a series of continuous notes in beat groups. If we take the same group of notes and displace it so a different note is on the beat, we will hear the result as a new melody of sorts. This is fascinating to me. We have to train ourselves to hear a phrase as the same thing, regardless of its rhythmic displacement. Likewise, we have to conceive the new melody created by displacing a phrase.

When there are pauses between groups of notes, we tend to think of the beginning of each cluster of notes as the “beginning”, even when it is not on the beat.

Rhythmically Displaced Fragment Patterns

displacing a 1-2-3-4 pentatonic scale fragment pattern

A fragment pattern is a series of notes that can be expressed generically in numbers. “1-2-3-4” represents four ascending consecutive notes in a scale or arpeggio. With the A minor pentatonic scale (A-C-D-E-G-A, etc.), it would represent A-C-D-E starting on the “A” note or C-D-E-G starting on the “C” note. With an A major scale (A-B-C#-D-E-F#-G#-A, etc.), it would be A-B-C#-D starting on the “A” note or B-C#-D-E starting on the “B” note. With an A minor arpeggio (A-C-E-A-C, etc.) “1-2-3-4” would represent A-C-E-A. Whatever the note set, 1-2-3-4 would represent four consecutive notes. 1-2-3-5 would represent three consecutive notes (1-2-3), then skipping a note (4 is skipped) and going on to “5”.

original 1-2-3-4 fragment pattern

Musical notation for the original 1-2-3-4 fragment pattern in 4/4 time. The melody is written on a treble clef staff, and the guitar tablature is on a six-line staff below. The melody consists of eighth notes: G4 (beat 1), A4 (beat 2), B4 (beat 3), C5 (beat 4), D5 (beat 1), E5 (beat 2), F5 (beat 3), G5 (beat 4), A5 (beat 1), B5 (beat 2), C6 (beat 3), D6 (beat 4). The tablature shows the fret numbers: 5, 8, 5, 7, 8, 5, 7, 5, 5, 7, 5, 7, 7, 5, 7, 5.

1-2-3-4 fragment pattern displace a half beat earlier so the second note is on beat one

Musical notation for the 1-2-3-4 fragment pattern displaced by half a beat. The melody starts with a half rest on beat 1, followed by eighth notes: G4 (beat 1.5), A4 (beat 2), B4 (beat 2.5), C5 (beat 3), D5 (beat 3.5), E5 (beat 4), F5 (beat 4.5), G5 (beat 5), A5 (beat 5.5), B5 (beat 6), C6 (beat 6.5), D6 (beat 7). The tablature shows the fret numbers: 5, 8, 5, 7, 8, 5, 7, 5, 5, 7, 5, 7, 7, 5, 7, 5.

1-2-3-4 fragment pattern displace two half beats earlier so the third note is on beat one

Musical notation for the 1-2-3-4 fragment pattern displaced by one full beat. The melody starts with a whole rest on beat 1, followed by eighth notes: G4 (beat 2), A4 (beat 2.5), B4 (beat 3), C5 (beat 3.5), D5 (beat 4), E5 (beat 4.5), F5 (beat 5), G5 (beat 5.5), A5 (beat 6), B5 (beat 6.5), C6 (beat 7), D6 (beat 7.5). The tablature shows the fret numbers: 5, 8, 5, 7, 8, 5, 7, 5, 5, 7, 5, 7, 7, 5, 7, 5.

1-2-3-4 fragment pattern displace three half beats earlier so the fourth note is on beat one

Musical notation for the 1-2-3-4 fragment pattern displaced by one and a half beats. The melody starts with a whole rest on beat 1, followed by eighth notes: G4 (beat 2.5), A4 (beat 3), B4 (beat 3.5), C5 (beat 4), D5 (beat 4.5), E5 (beat 5), F5 (beat 5.5), G5 (beat 6), A5 (beat 6.5), B5 (beat 7), C6 (beat 7.5), D6 (beat 8). The tablature shows the fret numbers: 5, 8, 5, 7, 8, 5, 7, 5, 5, 7, 5, 7, 7, 5, 7, 5.

portable displacement

Once you learn a fragment pattern and its rhythmic displacement, your mind learns the *process* and can apply it to other scales or to arpeggios. We learn the displacement as a treatment that can be applied to other sets of notes. The mind is amazing in this way, as it is in creative free association, which can be very complex upon analysis. Compare the two examples below and you'll hear that they use the same treatment.

1-2-3-4 fragment pattern displace two half beats earlier so the third note is on beat one

C7 arpeggio: 1-2-3-4 fragment pattern displace two half beats earlier, third note on beat one

RHCP Style Rhythmic Displacement Example

Rhythmic Displacement on Blues in G

Swing Eighths

Music notation for "Swing Eighths" in G major, 4/4 time, featuring eighth-note patterns and triplet rhythms. The notation includes a treble clef, a key signature of one sharp (F#), and a 4/4 time signature. The melody is written in eighth notes, often beamed in groups of three (triplets). The bass line is written in eighth notes, often beamed in groups of three (triplets). The notation includes a treble clef, a key signature of one sharp (F#), and a 4/4 time signature. The melody is written in eighth notes, often beamed in groups of three (triplets). The bass line is written in eighth notes, often beamed in groups of three (triplets).

Chord progressions indicated above the staff:

- Measures 1-4: G⁷
- Measures 5-8: C⁷ (measures 5-6), G⁷ (measures 7-8)
- Measures 9-12: D⁷ (measures 9-10), C⁷ (measures 11-12), G⁷ (measures 13-14), C⁷ (measures 15-16), G⁷ (measures 17-18), D⁷ (measures 19-20)

The notation includes a treble clef, a key signature of one sharp (F#), and a 4/4 time signature. The melody is written in eighth notes, often beamed in groups of three (triplets). The bass line is written in eighth notes, often beamed in groups of three (triplets).

SERIAL ANTI-METRIC NOTE GROUPING

A repeated pattern of notes doesn't have to occur with each instance starting on a beat. In fact, it can make the music more interesting if it does not.

Dividing Time with Anti-Metric Grouping

A Three-Note Fragment Pattern in Triplets Versus Sixteenths

The image displays two musical examples in 4/4 time, illustrating the concept of serial anti-metric note grouping. Both examples use a treble clef and a key signature of one flat (Bb).

The first example shows a triplet pattern. The melody consists of three measures, each containing a triplet of eighth notes. The notes are G4, F4, and E4 in the first measure; D4, C4, and B3 in the second; and A3, G3, and F3 in the third. The bass line is a simple accompaniment of eighth notes. The triplet groupings are indicated by brackets and the number '3' above each group.

The second example shows the same 3-2-1 fragment pattern played in sixteenth notes. The melody consists of three measures, each containing a group of sixteenth notes. The notes are G4, F4, E4, D4, C4, and B3 in the first measure; A3, G3, F3, E3, D3, and C3 in the second; and B2, A2, and G2 in the third. The bass line is a simple accompaniment of eighth notes. The groupings are indicated by brackets.

The pitch grouping in the example above is by every three notes. It is a 3-2-1 fragment pattern, implying that it descends three notes in a row on any scale or arpeggio. When played in triplets, the pitch grouping matched the metric grouping. When played in sixteenths, the pitch order is exactly the same, but the listener hears a new melody of sorts by interpreting what happens on each beat.

A new pattern of twelve notes is born. Once you learn the “treatment” of playing a repeating pitch group with one scale, it is relatively easy to then apply it to another scale or arpeggio.

A Four-Note Fragment Pattern in Sixteenths Versus Triplets

The image shows two musical examples. The first example shows a four-note fragment pattern (1-2-3-4) in sixteenths, which matches the metric grouping. The second example shows the same pattern in triplets, which creates a new melody. Both examples include guitar tablature (TAB) below the staff.

The pitch grouping in the example above is the fragment pattern 1-2-3-4, a repeating pattern of four notes in a row ascending a scale or arpeggio. When played in sixteenths, the pitch grouping matched the metric grouping. When played in triplets, the listener hears a new melody, interpreting what happens on each beat. Learn the twelve-note “treatment” and apply it to another scale or arpeggio.

Anti-Metric Grouping, Chuck Berry Style

This example groups eighth notes (a half beat each) in threes, where the meter groups them in twos, with two to a beat.

The image shows a musical example in 4/4 time, labeled 'A' and 'D'. It features a sequence of eighth notes grouped in threes, which is anti-metric. The notation includes a staff with a treble clef and a key signature of two sharps (F# and C#). Below the staff, there is a detailed explanation: 'four groups of three eighth notes (twelve), plus four eighth notes makes sixteen eighths during two bars'. The guitar tablature (TAB) is shown below the staff, with fret numbers and a 'full' (f) symbol indicating a full fret.

A Triplet, One of Them a Rest, Sequentially Earlier

7 5 7 5 7 5 | 8 7 5 7 5

Metric Flexibility

high flexibility

10 10 8 10 | 8 11 8 9 10 9 8 11 8 11 10 8 10 8 | 10 10 10 8 11 8 9 10 9 8 11 8 11 10 8 10

low flexibility

Some of these notes don't work against the chord when they're on the beat, so this rhythmic displacement is not desirable. To be safe, use melodic figures that allow any note on the beat.

flat six on the beat:
not good for a minor chord

natural 3 on the beat:
not good for a minor chord

BEAT OBSCURING

anti-metric seven-note group

Example of an anti-metric seven-note group in 4/4 time. The notation shows a treble staff with a melodic line and a bass staff with a guitar tablature (TAB). The tablature includes fret numbers (8, 10, 11) and a 'full' (f) symbol indicating a full fret. The group consists of seven notes, with the final note being a half note.

anti-metric six-note group

Example of an anti-metric six-note group in 4/4 time. The notation shows a treble staff with a melodic line and a bass staff with a guitar tablature (TAB). The tablature includes fret numbers (11, 8, 10) and a 'full' (f) symbol indicating a full fret. The group consists of six notes, with the final note being a half note.

anti-metric five-note group

Example of an anti-metric five-note group in 4/4 time. The notation shows a treble staff with a melodic line and a bass staff with a guitar tablature (TAB). The tablature includes fret numbers (11, 8, 10) and a 'full' (f) symbol indicating a full fret. The group consists of five notes, with the final note being a half note.

anti-metric four-note group

chromaticized arpeggios in anti-metric five-note groups

triads with two chromatics below their third or fifth

Where the cells below don't start on the beat, it causes "beat obscuring", which is useful in abstract improvisation.

- **Target Phrase Examples**

THREE STEPS TO VIRTUOSIC IMPROV

1. Make a Phrase Deliverable

Have a clear auditory image of each phrase and practice its components until you can deliver it clearly.

2. Globalize the Phrase

See the section on [Globalizing Musical Structure And Design](#). Globalize the phrases modally, rhythmically and in other ways. With every instance, make it as deliverable as the original phrase. The more you practice globalizing, the faster you will get at it. It will start taking much less time to globalize a new phrase.

3. Live Globalizing

When you get expert at globalizing you can actually start doing it *while improvising*, which is what all the great improvisers can (could) do: Bach, Mozart, Beethoven, Bartok, Chopin, Art Tatum, Charlie Parker, Charlie Christian, Wes Montgomery, Pat Martino, Joe Pass, Pat Metheny and so on.

Don't learn more than a few phrases before going on to learn to globalize them in the next step. Learn on which chords and in which styles you can use it. Incorporate it into your improvisation so you'll remember it. Periodically review it.

Three or More Design Elements

As you study these exercises, don't think of them as the finished melody. They are a concrete beginning that will be abstracted with various harmonic and melodic designs until accumulatively you have a great melody. Typically that will take four, five or more design elements. The design elements may include theme and variation, rhythmic displacement, beat-obscuring, chromaticizing, melodic cells, and so on.

RESONATING A SINGLE CHORD

Learn the First Arpeggio and Scale

learn the E minor form barre chord

The first two Em chord fingering below use one of the standard fingerings. The third one, fretted with the third and fourth fingers, is intended to prepare you for the fourth and last chord, the Am ("A" minor). The Am chord uses a six string barre with the first (index) finger.

The Am barre chord below is said to be in "Em form" because it is based on the open Em chord shown in the first three diagrams.

elaborate the E minor form barre chord into an arpeggio

learn the E minor form pentatonic scale, called “pentatonic fingering 1”

The diagrams below show the open position Em pentatonic scale. Open position implies that a fingering includes open strings. I give it the full name “Em7/11 pentatonic” scale, which exactly specifies the notes using generally accepted chord-naming conventions. In its movable form the key is named after the note fretted with the index finger on the sixth string.

Em7/11 pent. I
fingers

Em7/11 pent. I
formula

movable m7/11 pent.
fingers

movable m7/11 pent.
formula

transposing the Em7/11 pentatonic fingering

Each arpeggio adds notes to the chord shown above it. The notes are added on the first and sixth string. The arpeggio plays every “1, b3 and 5” tone within reach, while the chord plays only one note per string. The minor 7/11 pentatonic scale adds “4” and “b7” to the arpeggio, in every octave (throughout).

Minor Chord Tone Melodic Examples

First improvise on a single minor chord or a chord progression that would be compatible with a minor chord. Improvise with another musician or with a rhythm track. You can use a recording of a popular song, but that is not ideal, since other melody is likely to be played while you are improvising.

Play each individual tone of the minor chord against the rhythm track. The tones of the minor chord are "1, b3 and 5" of the pentatonic scale named after it.

Bob Marley style example in Em

Bob Marley style example in Em with slide options

Em

Jeff Beck style example in Am

Musical notation for a Jeff Beck style example in Am, 4/4 time. The notation includes a treble clef, a key signature of one flat (Bb), and a 4/4 time signature. The melody is written in a single staff, featuring a series of eighth and sixteenth notes, with several triplets and a final quarter note. The fretboard diagram below the staff shows the corresponding fingerings for the guitar, with strings labeled T (Treble), A (4th), and B (5th). The diagram includes fret numbers (5, 7) and indicates the use of a capo (A5).

Jeff Beck style example in Am with bend options

Musical notation for a Jeff Beck style example in Am, 4/4 time, with bend options. The notation includes a treble clef, a key signature of one flat (Bb), and a 4/4 time signature. The melody is written in a single staff, featuring a series of eighth and sixteenth notes, with several triplets and a final quarter note. The fretboard diagram below the staff shows the corresponding fingerings for the guitar, with strings labeled T (Treble), A (4th), and B (5th). The diagram includes fret numbers (5, 7) and indicates the use of a capo (A5). Arrows labeled "full" indicate where a full bend should be applied to the notes.

MELODICALLY SUPERIMPOSED CADENCES

The accompaniment is a harmonic (chordal) backdrop for the melody. Accompaniment and melody don't have to consistently agree harmonically. I use a two-second rule that states the melody and accompaniment can disagree for up to two seconds, with out the listener having a problem with it. After two seconds, the listener may become aware of harmonic mis-matching of the melody and harmony.

In under two seconds, the melody and accompaniment may each progress to an upcoming target chord with a different chord progression. When the melody is out of context briefly, it is said to be "outside". We commonly hear this in music, where the various music parts periodically get a little chaotic and out of context, then join back together, "singing on the same chords". See [Melodically Superimposed Cadences](#).

SETUP TONES AND TARGET TONES

Chord Tones Are Target Tones

The backbone of melody is chord tones. Prepare for improvising by learning where the chord tones are for each chord in the fretboard area where you are planning to improvise. Play many versions of the chords in the area, then arpeggios. Develop exercises that play the arpeggios rhythmically.

melodic and harmonic agreement

Melody suggests chords. Usually, a melody does so by emphasizing one or more of the notes in the chord played in the accompaniment. The chords suggested by the accompaniment and the chords suggested by the melody don't have to match exactly. Either the melody or the accompaniment may express incidental chords that the other doesn't represent. However, the chords suggested by melody and accompaniment usually show a strong correspondence.

target tones common to the scale and the chord

Generally, the more chord tones that are common with the scale you are using it on, the better the scale works melodically. However, it is also preferred to use certain scales more appropriate to the style you are playing. If, for example, you are playing to a traditional blues audience, they may prefer hearing key minor pentatonic during a IV9 chord, even though minor 6/11 pentatonic (minor pentatonic with a "6" instead of a "b7") has the exact same notes as a IV9 chord.

cell, motif and phrase

A *phrase* is what someone might sing or blow on a mouthpiece instrument in one breath. In spoken language, phrases of words are separated by commas and periods. Similarly in music, phrases are separated by a lack of activity in the form of a silence or sustain.

Rhythmic words are derived from groups of three, four or six regular pulses. Four pulse rhythmic words, for example can choose attacks on any combination of four regular pulses during a period of time. A phrase designed with many rhythmic words.

A *motif* is a single idea within a phrase. It has enough design element that it is thematic. Therefore, motifs commonly repeat, with or without variation.

A *cell* is the smallest melodic unit. They don't have enough detail to constitute a notable idea, such as a motif would. Cells would commonly have few notes, say four notes or less. To have more than four notes and not be a motif, they would have to be of an incidental design such as consecutive scale tones or a regular sequence of every other scale tone.

metric emphasis

Exercises in this chapter train you to target a chord tone on the first beat of the bar. Preceding the target tone, one two or three consecutive scale tones will lead up or down to the target. To spice it up a bit, we'll also abstractly back up the notes in the cell so the target tone is "pushed" and comes in a half beat early. This creates a cool syncopated rhythm, where the focus is intentionally on the offbeat (the last half of the beat), instead of on the beat.

Once you develop a facility to emphasize chord tones on the first beat of a bar, you can apply the same principle to the beat halfway through the bar, typically the third beat in four beat bars or the fourth beat in six beat bars.

upper and lower neighboring tones

Neighboring tones are one scale tone above or below a chord tone. In seven tone scales (heptatonic scales) such as the major scale, these notes are a whole step (two frets) or a half step (one fret) away from the chord tone. With common pentatonic scales, neighboring tones are a whole step or a step and a half (three frets) away from chord tones.

scalar setup tones

With scalar setup tones, one or more consecutive scale tones is (are) played immediately before a chord tone. The movement to the chord tone following the consecutive scale tones can be in the same direction they were moving or can change direction.

IMPROVISING WITH PICKUPS

Chromatic Pickups with Triplets

Combining the diminished seventh arpeggio fingerings in black below with chromatic scale fingering, you can build chromatics in triplets and use the diminished seventh arpeggios to keep track of where you are rhythmically.

Fingering Diatonic One Through Eight-Note Pickups by Interval

diatonic pickups with regular subdivisions of the beat

To predict the starting note for regular subdivisions of the beat, use a knowledge of interval fingerings. The scale tones will lead up or down to a target. The total number of notes involved is the number up notes in the pickup plus one for the target. If playing a four-note pickup, the total number of notes would be five.

number of pickup tones	interval
two	third
three	fourth
four	fifth
five	sixth
six	seventh
seven	octave
eight	ninth

Identifying the Intervals

thirds, fifths, sevenths and ninths

Memorize the full tertian fingering for the major scale for the target note in [Prime Scales, Chords and Arpeggios/Seven-Tone Scales in Seven Areas with Tertian Fingerings in Black and Gray](#). The rows of fingerings with black and gray circled backgrounds show full tertian fingerings. The numbered tones in black are every other scale tone. The numbered tones in gray are the second set of every other scale tone. The ascending series of numbered tones are for each color are 1-3-5-7-2-4-6 (repeat). Each numbered tone ascending or descending to the next within the same color (all black or all gray), such as “1” to “3” or “1” to “6”, is a scale-tone interval of a third. A numbered tone to another two scales tones higher or lower in the same color (all black or all gray) is a fifth.

tones higher in the same color (black or gray), not counting the starting tone	interval
one	third
two	fifth
three	seventh
four	ninth
five	ninth

major scale, in-position fingerings with tertian arpeggios

major scale, three-note-per-string fingerings with tertian arpeggios

fourths in the major scale

Major scale fourths can be memorized with the fourths diagrams below. The “stacks” or sequences of fourths are connected with lines. Note that each pair of notes in the series of fourths “7-3-6-2-5-1-4” are on the same fret, except from the third to second string, the note on the second string is one fret closer to the guitar body. Also note that the interval from “4” to “7” is an augmented fourth, making “7” one fret higher on the next smaller string. When “4” is on the third string, both of these exceptions come into play and “7” is *two* frets toward the body of the guitar from “4”.

fourths in major scale sharp five

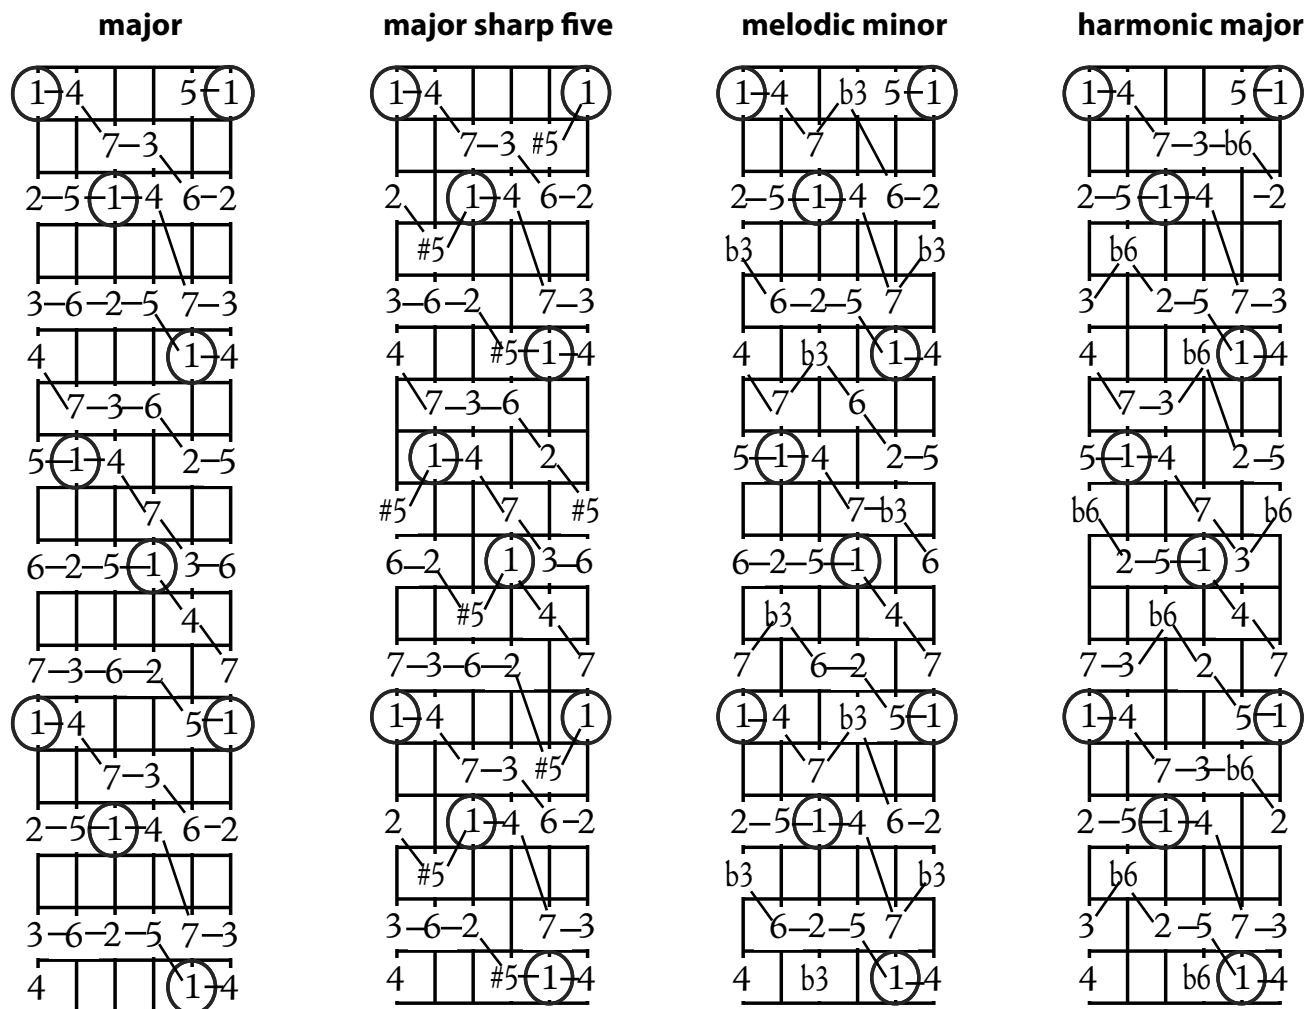

Fingerings for fourths in major sharp five are a modification of [fourths in the major scale](#). The “stacks” or sequences of fourths are connected with lines. Placing the tone center on “6” of major sharp five scale makes harmonic minor in the key of “6”. Note that it is *diminished fourth* from “#5” up a scale tone fourth to “1”, making a major third. Also note that “2” to “#5” is an augmented fourth, as is “4” to “7”. Note the diagonal shapes on most of the fourths with “#5”.

fourths in melodic minor

Fingerings for fourths in melodic minor are a modification of [fourths in the major scale](#). Note that it is *diminished fourth* from “7” up a scale tone fourth to “b3”, making a major third. Also note that “b3” to “6” is an augmented fourth, as is “4” to “7”. Note the diagonal shapes on most of the fourths with “b3”.

fourths in harmonic major

Fingerings for fourths harmonic major are a modification of [fourths in the major scale](#). The “stacks” or sequences of fourths are connected with lines. Note that it is *diminished fourth* from “3” up a scale tone fourth to “b6”, making a major third. Also note that “b6” to “2” is an augmented fourth, as is “4” to “7”. Note the diagonal shapes on most of the fourths with “b6”.

sixths

Memorize sixth fingerings by studying the chapter [Thirds and Sixths](#).

octaves

Memorize octave fingerings by studying [Note Sets, Structures and Design/Octave Shapes](#).

Target phrase: root (8), fifth (11), two passing chromatics (10 9 8 11 10 9)

example 5

Example 5 shows a melodic line in G minor (one flat) with a key signature of one flat. The fretboard diagram below the staff shows the following fret numbers for the strings (from top to bottom):

- String 1: 11, 10, 8, 7, 9
- String 2: 11, 8, 10, 9, 8, 11, 10, 9
- String 3: 8, 10, 10

Annotations above the staff include "half-whole-half & dim 7" and "seventh linear chromatics".

example 6

Example 6 shows a melodic line in G minor with a key signature of one flat. The fretboard diagram below the staff shows the following fret numbers for the strings (from top to bottom):

- String 1: 9, 10, 9, 7, 11
- String 2: 10, 9, 8, 12, 11, 8, 10, 9
- String 3: 8, 10, 8, 10, 8, 8, 10, 8

Annotations above the staff include "G7(b9)", "Cm9", "LC", "UN", "ninth", "seventh", "fifth", "half-whole-half & dim 7", "linear chromatics", and "beat obscuring pentatonic".

example 7

Example 7 shows a melodic line in G minor with a key signature of one flat. The fretboard diagram below the staff shows the following fret numbers for the strings (from top to bottom):

- String 1: 8, 9, 8, 9, 8, 10, 7, 9, 10, 7
- String 2: 8, 9, 10, 11, 8, 11, 8, 9
- String 3: 10, 8, 11, 8, 10, 8, 10

Annotations above the staff include "Dm7(b5)", "G7(b9)", "Cm9", "third", "fifth", "ninth", "harmonic minor II V arpeggio cadence", "linear chromatics", "every-other tertian chromatics", and "pentatonic scale".

example 8

Example 8 shows a melodic line in G minor with a key signature of one flat. The fretboard diagram below the staff shows the following fret numbers for the strings (from top to bottom):

- String 1: 11, 8, 9, 8, 11, 8, 10, 9
- String 2: 8, 8, 10, 11, 10, 8, 8
- String 3: 8, 10

Annotations above the staff include "Abm(maj7)", "Db7", "Cm", "fifth", "I minor 9 arpeggio", and "melodic minor I-IV arpeggio cadence".

example 9

Example 9 musical notation and fretboard diagram. The melodic line is in G minor (one flat) and consists of three measures. The first measure is labeled $A\flat m(maj7)$ and contains a triplet of eighth notes (G, F, E) followed by a quarter note (D). The second measure is labeled $D\flat 7$ and contains a quarter note (G), an eighth note (F), and a quarter note (E). The third measure is labeled Cm^9 and contains a quarter note (G), an eighth note (F), and a quarter note (E). The fretboard diagram shows the first three measures of a guitar fretboard in G minor. The first measure is labeled "melodic minor I-IV arpeggio cadence" and shows the notes 11, 7, 9, 7. The second measure is labeled "root" and shows the notes 11, 9, 9, 11, 9, 10. The third measure is labeled "I minor 9 arpeggio" and shows the notes 8, 8, 8, 10, 8, 7, 8, 10, 10, 8, 10, 11, 8.

example 10

Example 10 musical notation and fretboard diagram. The melodic line is in G minor (one flat) and consists of three measures. The first measure is labeled $Fm^7(b5)$ and contains a quarter note (G), an eighth note (F), and a quarter note (E). The second measure is labeled $B\flat m^7$ and contains a quarter note (G), an eighth note (F), and a quarter note (E). The third measure is labeled Cm^9 and contains a quarter note (G), an eighth note (F), and a quarter note (E). The fretboard diagram shows the first three measures of a guitar fretboard in G minor. The first measure is labeled "Aeolian b5" and shows the notes 8, 10, 11, 9, 8, 9, 11, 10. The second measure is labeled "Dorian b2" and shows the notes 8, 9, 10, 11, 8, 11, 9, 10. The third measure is labeled "I minor 9 arpeggio" and shows the notes 11, 10, 11, 8, 8, 10, 7, 10.

MODAL GLOBALIZATION OF PHRASES

Jazz Blues Rules

Jazz blues is a great chord progression to study for improv. It has I, IV, V, like the standard twelve-bar blues progression, but it also has I, VI, IIm V, the most common four-chord progression in jazz. I-VI-II-V is often called “rhythm changes” both because it is in many connecting sections (vamps) or turn-arounds (ending cadences) in jazz and because it is the basis of the chord progression for George Gershwin’s *I Got Rhythm* from his musical score *Porgy And Bess*.

Follow the rules below for improvising on a jazz blues and you’ll learn a lot about improv in general, harmonically (what notes to play on each chord).

- **pentatonic and arpeggio** Base your themes on pentatonic scales and arpeggios. Find pentatonic scales and arpeggios that work on a number of consecutive chords.
- **three versus flat three** Play major or minor pentatonic and arpeggios throughout with both key scale natural three and flat three. Use more flat three to keep it bluesy. In bars two, five and six, during the IV7 type chords, you must play flat three.
- **play key scale 4, 5 and b7 during V7** Use minor pentatonic tones that are in versions of the V chord. “4” and “5” are in the V7 chord (key scale 5-7-2-4). “b7” of the key is the sharp nine in a V7#9 chord.
- **reinforce IV with “6”** Reinforce the IV chord by sometimes changing a flat seven or five to a key scale six, or by inserting a key scale six. The triad basis of the IV chord is 4-6-1, so six strengthens the relationship to IV. Key scale four is good also, but the good thing about six is that it is ambiguous: key scale six can be an added harmony to *every* chord in a jazz blues.
- **assign tones** Assign associations of certain key scale tones to certain chords. For example, establish in your melody that six refers to the IV chord by using it more on IV and less on other chords. Or assign the flat third to the I and V chords and the natural third to the II and V chords. This is arbitrary. You could assign six to the IV chord in one improvised section and assign it to the I chord in another.
- **play IIm on II V** Bars 9, 10, 12 as IIm. In bars nine, ten and twelve, treat the IIm V progression as IIm by playing the same kind of melody you would play on the IV chord with key scale I minor (Dorian), but play in II minor with II minor pentatonic, IIm69 pentatonic (major pentatonic with a flat three), elaborating either of those to II Dorian (Dorian in the key of II).
- **play V on II V** Bars 9, 10, 12 as V. As stated above, you play key scales natural three and flat three throughout, except on the IV chord and generously use the flat third to keep it bluesy.

Likewise, play in the key of V with natural and flat third

- **key flat five on I dim7 (=IVdim7)** Use the option of flattening the fifth of the key in bar six. Minor pentatonic with a flat five and key scale Dorian flat five work well for this.
- **key sharp one on VI7** Use the option of sharpening key scale one in bar eight. This is very effective with key scale Mixolydian sharp one, by establishing a key scale Mixolydian phrase earlier in the progression (ideally in bar seven), then restating the theme with key scale sharp one in bar eight. This creates II harmonic minor and gives the impression that you are going to the key of II minor in bar nine. With an [Escherian cadence](#), you actually will go to II Dorian in bar nine. See [Melodically Superimposed Cadences/Escherian Cadence](#).

With each of many simple one or two bar phrases, repeat it through the jazz blues progression and adapt it according to the rules below.

Twelve-Bar Jazz Blues (parenthesis example in Bb)

bar 1 I 7(Bb7, 9, 6 or 13) key scales with 3 or b3	bar 2 IV7 (Eb7, 9, 6 or 13) key scales with b3	bar 3 I 7(Bb7, 9, 6 or 13) key scales with 3 or b3	bar 4
bar 5 IV7 (Eb7, 9, 6 or 13) key scales with b3	bar 6 #IV diminished 7 key scales with b3, b5 option	bar 7 I 7(Bb7, 9, 6 or 13) key scales with 3 or b3	bar 8 VI7 (G7b9) key 3 or b3, #1 option
bar 9 IIIm7 key scales featuring key scale tones 4, 5 and b7 II Dorian with IIIm711 or IIIm69 pentatonic subsets or V Mixolydian with I711 or Ima69 pentatonic subsets or V Dorian with Vm711 or Vm69 pentatonic subsets	bar 10 V7 (F7, 9, 13 or 7#9)	bar 11 I7 (Bb7) same as bar 1 VI7 (G7) same as bar 1. Get in key scale #1, if you can	bar 12 IIIm7 (Cm7) V7 (F7) same as bars 9 and 10

Basics: Adapting a Phase for I7, IV7, V9, IIIm7, III7, VI7 and Chords

In a jazz blues setting, modal adaptation is not too detailed. In summary, the IV7 has a flat three, the I7 has a natural three and the VI7 has a natural three and a sharp one (all in terms of the key scale). In jazz blues, all of these would have a key scale flat seven.

I typically write a theme for minor seventh or dominant seventh first. The minor seventh would have a flattened third and the dominant seven a major third.

I minor and IV: flat third

For a I minor or a IV chord, the phrase should have a flatted third and a flatted seventh. A flatted seventh in the original phrase for a I7 chord could optionally be changed to a six, to correspond with the key scale 4-6-1-b3 tones that makeup the IV7.

I major: natural third

For a I chord, the phrase can have a natural third or a bluesy flatted third (and a flatted seventh). Authentic blues melodic sensibility doesn't overuse the major third. It's supposed to be sad (minor). So, typically include many flatted thirds in your phrases.

IIm7 or V9: flat third in the key of II

For a IIm7 chord or for a V9 chord, play the phrase should have a flatted third and a flatted seventh in the key of II.

V7 and Vm7

Most of a melody is usually in the overall key, sometimes using many types of key scales (I Mixolydian, I Dorian, etc.). The most common second key is V. The five chord can be played in the key of V, but don't overdo it. Like with the I major in blues, a phrase on a V major chord should usually include flatted thirds. If the V chord is minor, you must use only flatted third in the key of five, no natural thirds.

VI major (or VI7): natural third and sharp one

For a VI7 chord (chord scale 1-3-5-b7, key scale 6-#1-3-5), the phrase should have a key scale sharp one or a natural one for a bluesy flatted third in the key of the chord root. On a VI7 chord, key scale one can be played with a microtonal bend, typically about 25% of a half step (fret) toward the key scale #1.

It is usually important to not use the I7 (C7) with #1 (C7 with C# is C#dim7) for the entire duration of the VI7 chord (A7), but to mix it with playing bluesy licks in the key of VI.

Songs with two or more bars of VI major are: Monkey Man (bars 3-4 and 7-8 of verse), Scrapple From the Apple (section B, bars three and four), I Got Rhythm (section B, bars three and four), Sweet Georgia Brown (first four bars), Flintstones (section B, bars three and four), Stella By Starlight (first two bars of section B), Caravan section B (4 bars of VI), Brazil (the first 12 bars of section B).

Songs with one bar of VI are: jazz blues (bar eight), Yardbird Suite (bar four), Days of Wine and Roses (bar four), Try a Little Tenderness, Donna Lee (bar two), Fly Me to the Moon (section B, bar 12), Autumn Leaves (last bar of section C), Lullaby Of Birdland (section B, bars one and five), Wave (section A, bar eight), Alice's Restaurant, Dock of the Bay, Kodachrome (section B, bar 2).

III7

Songs with two bars of III7 (E7, V of Am with C major [parent scale](#)) are: Spain (bars 5-8 and 19-20), Sumertime (bars seven and eight), I Got Rhythm (section B, bars one and two), Scrapple from the Apple (section B, bars one and two), Sugar (bars seven and eight), Flintstones (section B, bars one and two), Sultans of Swing (verse bars three and four), Santeria (verse bars three and four), Cocaine Blues (section B, bars one and two), How Insensitive (bars three and four), Road Song (section A bars 3-4 and section B, bar 8), Nature Boy (section B, bars 1-2 and 7-8), I Want You (the last four bars of the verse), Paint It Black (verse bars 3-4 and 7-8), You've Got a Friend (section A bars 6, 15-16; section B bars 7-8 and 14).

Songs with one bar of III7 (E7, V of Am with C major [parent scale](#)) are: Georgia on My Mind (bar two), Sunny (bars 4, 8, 14 and 16), The Way You Look Tonight (section A bar five and section B bars two and ten), Equinox (bar ten), Mr. P.C. (bar ten), Black Orpheus (E7 is III7 of C and V7 of the key of Am), Blue Bossa (bar seven), Donna Lee (bars six, eight and ten), Killing Me Softly (bar 12), Moanin' (section B, bar eight), The Preacher (bar 12), 'Round Midnight (section A bar eight and section B bars two and four), Song for My Father (section A bar seven and section B bar 7), Wave (section A, bar seven), Hotel California (verse bars two and eight), House of the Rising Sun (bar four), Angie (verse bar two), Hurricane (the last bar), Superstition (section B bar four), While My Guitar Gently Weeps (bar eight).

IIIIm7

In many situations, IIIIm7 can be treated as a I chord. For example, the IIIIm-VI-IIIm-V progression often replaces I-VI-IIIm-V. The listener can usually imagine the IIIIm as I with its third in the bass.

Frequently also, IIIIm7 can be treated as III7 (see above), when it progresses to VIIm or is expected to progress to VIIm). See [Melodically Superimposed Cadences/Escherian Cadence](#).

Swing Eighth

Three systems of guitar tablature for the song "The Sound of Silence" by Simon & Garfunkel. Each system includes a treble clef staff with a key signature of one flat (Bb) and a time signature of 4/4. The first system is for the Bb7 chord, the second for G7, and the third for Cm7. Each system shows a melodic line with triplets and a bass line with fingerings. The tablature includes fret numbers and pickup instructions for VI7 and IIIm7.

Swing Eighths

The image displays a musical score for the song "The Sound of Silence" by Simon & Garfunkel. It includes a guitar part and a bass part, both with standard notation and tablature. The guitar part is in the key of B-flat major and 4/4 time. The bass part is in the key of B-flat major and 4/4 time. The score is divided into three systems. The first system shows the beginning of the song, with the guitar playing a series of chords and the bass playing a simple line. The second system shows the main melody of the song, with the guitar playing a series of chords and the bass playing a simple line. The third system shows the end of the song, with the guitar playing a series of chords and the bass playing a simple line. The score is written for a guitar and a bass, with the guitar part in the upper staff and the bass part in the lower staff. The guitar part is written in standard notation with a key signature of two flats (B-flat major) and a 4/4 time signature. The bass part is written in standard notation with a key signature of two flats (B-flat major) and a 4/4 time signature. The score includes a variety of musical notations, including chords, scales, and fingerings. The guitar part features a series of chords, including B-flat major, E-flat major, and B-flat major. The bass part features a series of scales, including the B-flat major scale and the E-flat major scale. The score is a comprehensive musical score for the song "The Sound of Silence" by Simon & Garfunkel, featuring guitar and bass tabs.

Adapating Ima7, IVma7

Both Ima7 and IVma7 need the natural seventh of the key. It's the seventh of the Ima7 and the third of the IVma7. The flatted seventh could be used for a blues expression on either Ima7 or IVma7. Where possible, the key scale seventh in a phrase should be changed to key scale six (unless there is already a six) to correspond more to the tones of the IVma7 chord (key scale 4-6-1-3).

Both Ima7 and IVma7 need the natural seventh of the key. It's the seventh of the Ima7 and the third of the IVma7. The flatted seventh could be used for a blues expression on either Ima7 or IVma7. Where possible, the key scale seventh in a phrase can be changed to key scale six (unless there is already a six) to correspond with the major pentatonic and sixth chord basis of the major and Lydian modes. See the chapter on [Modes](#).

Substitution and Modal Globalizing

Globalize each phrase modally by converting and adapting it to every usable mode of major, harmonic minor and melodic minor. Start with the three minor modes of major: Dorian, Aeolian and Phrygian.

the categories of substitution are:

[shared thirds](#) (secondary roots on 6, 1, 3 or 5)

[darkening](#) (substituting a chord that has b7, b7-b3, or b7-b3-b5)

secondary dominants (see [Secondary Dominant](#), Modal II-V-I Cadences and Turnarounds/[Secondary Dominant](#) and Melodically Superimposed Cadences/[Secondary Dominants](#))

[flat five \(tritone\) substitute](#), using bII instead of V

[interchangeable II and V](#)

practice this short list on Autumn Leaves section A:

Use Cm7 on Ebma7, F7 (high). Use Cm6 on Am7b5

Use Dm7 on Fma7, Bbma7 or Gm7 (high)

Use Gm7 on Bbma7, Ebma7 or Cm7.

in Bb, these are the substitutes for each chord:

For Bbma7, use Gm7, Dm7 or (high range) F6

For Cm7, use Am7b5, Ebma7 or Gm7 (high). If immediately followed by F7, substitute F7.

For Dm7, use F6

For Ebma7, use Cm7, Gm7 or Bbma7

For F7, use Dm7, Am7b5, Cm7 or Fm7 (F Dorian, Eb major parent scale)

For Gm7, use Bbma7 or Dm7 (high)

For Am7b5, use Cm6. If immediately followed by D7, substitute D7.

in Bb, these show the application of each chord:

Use Bbma7 on Gm7 or Ebma7 (high)

Use Cm7 on Ebma7, F7 (high). Use Cm6 on Am7b5

Use Dm7 on Fma7, Bbma7 or Gm7 (high)

Use Ebma7 on Cm7, Abm7b5 (de-emphasize Bb note)

Use F6 on Dm7 or Bbma7. If immediately preceded by Cm7, use on Cm7.

Use Gm7 on Bbma7, Ebma7 or Cm7.

Use Am7b5 on Cm7, Ebma7 (de-emphasize Bb note)

RHYTHMIC GLOBALIZATION OF PHRASES

Generally you shouldn't elaborate nor abbreviate the region from the end of a setup phrase through the beginning of the target phrase.

Metric Flexibility

Metric flexibility of a phrases regards the success of placing any of the notes on the beat. Some notes should not be emphasized and should not be placed on the beat. Some common note sets for a metrically flexible phrase are a minor pentatonic scale with a chromatic between four and five ($\#4/b5$) and a major pentatonic with a chromatic between two and three ($\#2/b3$). In either of those cases, the chromatic tone ($\#4/b5$ or $\#2/b3$) can work on the beat as a blue note. Also, a lower chromatic embellishment can work on the beat as an [appoggiatura](#).

Setup Phrases

You generally wouldn't elaborate nor abbreviate the end of a setup phrase because it needs to connect to the target phrase. Globalize setup phrases rhythmically by abbreviating or elaborating the beginning of the setup phrase with pickups before it, progressively one, two and more pickups of equal duration. Keep these elaborations simple, so you can think and employ them "on the fly".

abbreviate the beginning of the setup phrase

Globalize each setup phrase rhythmically by omitting notes from their beginning. This abbreviation works, unless the first remaining note is dependent on the note before it (that you've omitted). For example, if the original was 9-b9-1-b7, omitting the "9" wouldn't show the function of "b9" as a passing chromatic between 9 and 1.

Example 1 in C Dorian - original

Example 1 in C Dorian - abbreviate the beginning of the setup phrase

Example 2 in C Dorian - original

flipping tertian----- fifth every-other tertian chromatics-----

10 8 10 8 11 8 9 10 9 8 11 8 11 10 8 10

Example 2 in C Dorian - abbreviate the beginning of the setup phrase

flipping tertian----- fifth every-other tertian chromatics-----

10 10 8 10 8 11 8 9 10 9 8 11 8 11 10 8 10

elaborate the beginning of the setup phrase

We can add notes before the beginning of a setup phrase, leaving it intact. Since the setup phrase itself is usually a pickup to the target phrase, additional notes make it a longer pickup. In the 12 bar blues example below, imagine the original setup was conceived as a four-note pickup. By adding a note before it each four-note setup phrase, each becomes a five-note pickup.

Blues With Five-Note Setup Phrases - video tab: [single note, with chords](#)

Swing Eighths F7(#9) Bb13 Eb7 Bb7 Eb7 Eo7 Bb13 G7 Cm7 F7 Bb13 G7 Cm7 F7(#9)

6 9 8 6 9 6 9 6 8 6 7 9 6 8 6 8 6 8 7 6 6 6 8 6 9 8 6 9 6 9 6 8 6 4 6 4 6 4 6 4 6 5 8 10 6 9 6 8 6 7 8 8 6 9 8 6 9

rhythmically displace the setup phrase

If the setup phrase is metrically flexible (meaning any of its notes could be on the beat), rhythmically displace the pickup phrase one beat division (eighths if its made of eighths) earlier and play the first note of the target phrase early. This “**pushes**” the first beat of the target chord, creating an interesting syncopation.

Example 2 in C Dorian - original

flipping tertian----- fifth
every-other tertian chromatics-----

TAB: 10 10 8 10 | 11 8 9 10 9 8 11 | 8 11 10 8 10

TAB: 7 10 8 7 | 8 8 10 8 8 10 8 | 11 8 8 10

Target Phrases

If you are using a setup phrase before the target phrase, you would usually not abbreviate the beginning of the target phrase. Elaborate the end of the target phrase by continuing the last structure or adding something to the end.

elaborate or abbreviate the end of the target phrase

In the target phrase, make the rhythm irregular, where the examples are usually first given here with all notes of the same duration (all eighth notes or all sixteenths). Move a note intended to be on a beat, earlier in time to replace the note off the beat before it (don't change the rest of the phrase). For a funky aggressive feeling, leave a rest on the beat to produce a rest push. For a smoother syncopation, like bossa nova sustain the note onto its original place on the beat.

use anti-metric note grouping

In Setup And Target Phrase Example 3 - Pivot Target, a **pivot tone** was used in the target phrase. **Anti-metric note grouping** is a form of **beat-obscuring**. Pivot tone figures commonly occur in pairs of notes, with every other note staying on the same note (the "pivot") and the alternate (every-other) notes go up or down a scale or arpeggio. In Example 3 - Pivot Target, the changing notes in the target phrase were on the beats and the repeating pivot tone was on the offbeats. By playing the changing notes to the offbeat in the example below, the emphasis is reversed and the phrase sounds syncopated. This is anti-metric.

By changing the rhythm from sixteenths to triplets, the changing notes are obscure the beat in a different way. Now there are three notes every beat, but every other note is emphasized, making a three against two rhythm.

Example 3 in C Dorian - original

Example 3 in C Dorian - Target Ascending Pivot Tones On The Beat, Descending Off The Beat

Example 3 in C Dorian - Pivot Tones In Triplets

flipping tertian----- pivot tone with changing notes on the beat-----

7 10 8 7 | 8 8 10 8 8 11 8 8 11 | 10 8 10

delay a note within the target phrase

By delaying a note in the target phrase, without omitting notes, the phrase becomes longer in time. This is okay, unless that places unwanted notes on the beat. To be safe, do this with [metrically flexible](#) phrases.

A lower chromatic embellishment usually works better in the last beat division before the beat, (the last half, third or quarter of the beat), leading into a note on the beat following it that it strengthens. A lower chromatic embellishment also works on the second quarter of the beat to strengthen the note on the third quarter of the beat. Likewise, passing chromatics work better if they are inconspicuously *not* on the beat.

If the target phrase is [metrically flexible](#), use rests or sustains in some places, without omitting notes. If you leave a rest or silence at the beginning of the beat, it creates a syncopation. These syncopations have been called “pushes”. When a note at the end of a beat is followed by a silence (rest) on the beat, a “rest push” occurs and the rhythmic feel is funky and punchy. Sustaining a note at the end of the beat onto the next creates a “sustain push” and produces a softer, cooler, samba-like rhythmic feel.

Be aware of the metric flexibility of the notes in the target phrase and don't use a push in such a way that an unwanted note is on the beat. To some degree, a note on the beat implies it is part of a chord. If that implied chord sound is not acceptable, you should de-emphasize the note by avoiding putting it on the beat.

SETUP PHRASE EXAMPLES

Flipping Tertian Melodic Cells

These four-note melodic cells change the first note on one beat to a note beginning the next beat that is up or down one heptatonic (seven-tone) scale tone. Movement to the target from the last setup tone can be up to a minor third interval. You need to visualize the arpeggio you are progressing to.

17132 ("2" shows that it resolves up from "1")

First system of musical notation. The top staff is in C minor (one flat). The first measure of each phrase shows a descending eighth-note scale: 10, 8, 10, 11. The second measure shows the root of the Cm chord (C) on a whole note. The fretboard diagram below shows the root notes: 10, 8, 10, 11 for the first phrase and 11, 10, 11, 10 for the second phrase.

Second system of musical notation. The top staff shows the third of the Cm chord (Eb) on a whole note. The fretboard diagram below shows the third notes: 10, 8, 10, 7 for the first phrase and 7, 10, 7, 10 for the second phrase.

Third system of musical notation. The top staff shows the fifth of the Cm chord (G) on a whole note. The fretboard diagram below shows the fifth notes: 10, 8, 10, 10 for the first phrase and 10, 8, 10, 10 for the second phrase.

Fourth system of musical notation. The top staff shows the seventh of the Cm chord (Bb) on a whole note. The fretboard diagram below shows the seventh notes: 8, 11, 8, 10 for the first phrase and 10, 8, 10, 8 for the second phrase.

Fifth system of musical notation. The top staff shows the ninth of the Cm chord (Db) on a whole note. The fretboard diagram below shows the ninth notes: 11, 10, 11, 8 for the first phrase and 8, 11, 8, 11 for the second phrase.

Harmonic Minor II V Type Setup Phrases

(UN = upper neighbor)

First system of musical notation for the Harmonic Minor II V Type Setup Phrases. It shows a sequence of chords: Dm7(b5), G7(b9), and Cm. The first measure is labeled "root" and the second measure is labeled "root". The notation includes a treble clef, a key signature of two flats (Bb and Eb), and a bass line with fret numbers (7, 10, 9, 8, 7, 9, 10, 7, 8, 8, 9, 10, 7, 9, 10, 7, 9, 10).

Second system of musical notation. It shows a sequence of chords: Dm7(b5), G7(b9), and Cm. The first measure is labeled "third" and the second measure is labeled "third". The notation includes a treble clef, a key signature of two flats (Bb and Eb), and a bass line with fret numbers (10, 8, 9, 8, 7, 9, 7, 10, 11, 8, 9, 8, 9, 8, 7, 9, 10, 7, 8).

Third system of musical notation. It shows a sequence of chords: Dm7(b5), G7(b9), and Cm. The first measure is labeled "fifth" and the second measure is labeled "fifth". The notation includes a treble clef, a key signature of two flats (Bb and Eb), and a bass line with fret numbers (8, 9, 8, 10, 7, 10, 9, 7, 10, 9, 8, 9, 10, 7, 8, 7, 10, 7, 9, 11, 8, 10).

Fourth system of musical notation. It shows a sequence of chords: Dm7(b5), G7(b9), and Cm. The first measure is labeled "seventh" and the second measure is labeled "seventh". The notation includes a treble clef, a key signature of two flats (Bb and Eb), and a bass line with fret numbers (10, 7, 10, 7, 10, 7, 9, 7, 10, 9, 11, 10, 8, 10, 8, 9, 10, 7, 10, 9, 7, 11).

Fifth system of musical notation. It shows a sequence of chords: Dm7(b5), G7(b9), and Cm. The first measure is labeled "UN ninth" and the second measure is labeled "UN ninth". The notation includes a treble clef, a key signature of two flats (Bb and Eb), and a bass line with fret numbers (10, 8, 9, 8, 9, 8, 10, 9, 7, 11, 10).

Every-Other Tertian Chromatics

Four-Note Linear Chromatics

Musical notation for the Cm9 scale in standard and tablature. The scale is shown in a single staff with a treble clef and a key signature of one flat (Bb). The notes are: C (root), Eb (third), F (fifth), Gb (seventh), Ab (ninth), Gb (seventh), F (fifth), Eb (third), and C (root). The tablature below the staff shows the fret numbers for each note: 10, 8, 11, 7, 8, 9, 10, 11, 8, 11, 9, 10, 11, 7, 8, 9, 10, 9, 8, 12, 11, 8, 10, 9, 8, 11, 10, 9, 8, 10, 7, 11, 10.

Rhythmic Themes and Layers

- **Rhythmic Layers**
- **Components of Rhythm**
- **Rhythmic Theme and Variation**
- **Rhythmic Composites and Ensemble Rhythms**

RHYTHMIC LAYERS

Rhythmic Levels

simple relationships

In two or more musical parts, each part can be at a different rhythmic level, twice as fast as another, three times as fast as another. The parts may have a more complex fractional relationship than two to one, three to one or four to one.

polytonal rhythm

The beat (or other time period) may be simultaneously divided into three parts and into two parts. It may be simultaneously divided into four parts and into three parts.

two or more parts is conceptual: they can be on a single instrument

Polytonal instruments like the guitar or piano can simultaneously sound two or more notes at once. Music is commonly played on polytonal instruments that has two or more parts.

harmonic types of music

Monophonic music has a single melody line. Homophonic music has two or more melody lines, with all of the lines moving in parallel rhythmically, that is with no rhythmic individuality. Each part in homophonic music has the same number of notes as another part, each note occurring at the same time as a note in each of the other parts. Polyphonic music has rhythmic individuality for each of the parts, with some occurrences of a note in one part not accompanied by notes in all of the other parts.

counterpoint

Counterpoint is the study of note against note in a multi-voiced arrangement. The term comes from the Latin expression *punctus contra punctus*, which means point against point. Think of each note head in music notation as a point. The five species of counterpoint:

1. first species counterpoint: note against note.
2. second species counterpoint: two or three notes to one.
3. third species counterpoint: four or six notes to one.
4. fourth species counterpoint: two notes per melody note with syncopation.
5. fifth species (also called free or “florid” counterpoint): combination of the other species.

Themes in Rhythmic Layers

As with the tonal aspect of music, rhythm is layered. Think of each rhythmic level as a layer, usually with the slowest level conceptually closest to you. Not only is each rhythmic level at a different ratio to another, but each level has its own thematic character.

Each section of music uses rhythmic themes. The simplest thematic rhythms involve the fewest accents during a bar or two, while the more complex layers add more to the simple layers.

For each bar of three or four beats, there are usually two or three main accents. These are the primary layer. Simultaneously, there are more layers. The next layer adds less important accents. A third layer can add still less important accents (usually at a faster rhythmic level), and/or adds more detail through variation during multiple bars.

Two or Three Significant Parts

The listener can only process two or three significant musical parts at once. If you overburden the listener with too many different rhythmic or harmonic ideas at once, they won't understand your music and probably won't like it. See also [Theme And Variation](#).

some parts are just background

Some musical parts don't require the attention of the listener and are part of the textural background. These parts tend to be more regular and just "keep time".

notable parts need to be distinctly the same or distinctly different

Musical parts that stand out to the listener should be few in number. If there are more than two or three notable parts, some of them should be made similar enough to be considered a single idea to lessen the number of different notable ideas.

Compatibility of Parts

Musical parts need to be rhythmically compatible. Each added part needs to be discernible to the listener as one of three things:

- ♦ [Theme and variation](#): a duplication, elaboration or abbreviation of an existing part.
- ♦ An [ensemble part](#) which can be combined in a "gear-like" or "dovetail" manner to create an ensemble.
- ♦ A part at a faster or slower [rhythmic level](#) (by a simple ratio such as doubling, halving or tripling) that is comprehensible at the same time as the other parts. The relationship between the parts shouldn't be too complex. Four parts per beat in one part and three in another are challenging to hear at once, but can work if simple enough otherwise.

COMPONENTS OF RHYTHM

Pulse and Subdivision

the rhythmic grid

Musical rhythm is performed in relation to continuous pulses or clicks. The novice musician should develop accuracy in playing rhythm by playing with a metronome or drum machine. These devices sound an evenly-spaced, repeating click or percussion sound. These metronomic sounds can be thought of in groups of twos, threes or fours.

rhythmic selection from a continuous pulse

Fundamental pieces of music are based on two, three or four parts per beat. If a piece of music is based on two parts per beat, every note would begin precisely on either the first half or the second half of the beat. Similarly, pieces of music based on three or four parts per beat can be accurately performed by thinking of the correct number of subdivisions per beat, being relaxed and well-practiced on the techniques involved in performing the notes and executing each note precisely on the correct subdivision of the beat.

This may be harder than it sounds. It is very important that you use economical movement with the tip of the pick, choice of direction in picking, economical movement with the fretting fingers and good form. Any distraction caused by wasted motion can throw your rhythm off. You have to not only imagine the note being performed on the right part of the beat, you have to make it sound at the right time.

rhythmic selection applied as metronomic strumming

When rhythms are generally continuous, they can usually be strummed with a continuous down-up motion. The strings are contacted necessary to sound a chord and missed when a rest (silence) is desired.

duple rhythm (also see [Rhythmic Words and Comping](#) / [Rhythmic Words](#))

Duple rhythm subdivides the beat into two equal parts. The two parts can be counted with a number and the syllable “and,” like this: [“one, and, two and, three and, four, and.”](#) Practice strumming the combinations below of two parts per beat. [click to play video](#)

Accents

Greek plays

In performing plays on stage in ancient Greece, one cast member would gently stomp his foot at a regular frequency, sporting an anklet with bells. This would provide a regular meter for the players to speak their lines, such as became the tradition for poetry in the millennia to follow.

Here's an example from Aristophanes' *The Acharnians*. Imagine how the bell anklet helped to coordinate the chorus (multiple cast members) speaking lines together.

[Greek play](#)

Ode To Joy

The metering of rhythm in Greek plays became a model for music in Europe. By the time Beethoven wrote his ninth symphony in 1824, the sense of rhythm in European music had become very regimented. There has since been talk of the "tyranny of the bar line", where the bars which divide music into equal numbers of beats had made the music too regular and too predictable.

The standard accents in bars of four beats are on beats one and three. Beat one is the beginning of the bar and beat three begins the last half. You can hear this in *Ode To Joy*, from Beethoven's ninth symphony:

[Ode To Joy](#)

African influence

African music is sophisticated rhythmically. It contradicts the implied accents with ones on normally unaccented beats (or normally unaccented parts of beats). This contradiction is called syncopation.

In counting two subdivisions (parts) per beat verbally, the traditional counting syllables is "and" after each number: "1, and, 2, and, 3, and, 4, and". This is usually written in an abbreviated form: "1 + 2 + 3 + 4 +".

[counting 2 parts per beat](#)

[straight, march-like rhythm](#)

[syncopated rhythm](#)

backbeat

When the standard accent in four beat bars on beats one and three is contradicted by accenting beats two and four, it is nicknamed the backbeat.

[accents on beats 1 and 3](#)

[backbeat on beats 2 and 4](#)

push and pickup

When a note or chord is played a half beat early, on the “and” before the numbered beat, it is called a push. This is where, for example, a chord would be played on the “and” of 2 before three, instead of on “3”, not additionally on “3”. If the chord was played on the “and” of 2 and on “3” as well, it would be called a pickup. So a pickup for beat “2” would play on the “and” of 1 and also on “2”, while a “push” for beat two would only play on the “and” of 1 and not on “2”.

[accent on 3](#)

[push 3](#)

[pickup to three](#)

[pickup to one](#)

[backbeat accent on 2 and 4](#)

[backbeat, with a push to 4](#)

[common eighth accents](#)

Accent is emphasis of a note or chord. Periodic accented notes can form a secondary melody. There are four common types of accent: dynamic, tonic, timbrel and agogic. Other types can be created by using another device to emphasize notes, such as a light flashing simultaneously with the playing of a note.

dynamic accent

Dynamic accent is performed by playing a note or chord louder than the ones surrounding it (Examples 1 and 2).

Example 1 employs accents on the beat (on 1, 2, 3 and 4). The accented notes in Example 2 are syncopated, since they are on the offbeat (on the “&”s after each beat). The accented notes in Example 4 are also syncopated, since they are on the second or third of three parts per beat.

The first part of each beat is counted with a whole number (1, 2, 3, 4, etc.). *Syncopated* notes are those *not* on the first part of the beat. If there are no notes on the beat, any notes on the offbeat would have the effect of being accented (*Example 3*).

this accent mark indicates the notes should be played louder

Ex. 1 Ex. 2 Ex. 3

1 & 2 & 3 & 4 & 1 & 2 & 3 & 4 & 1 & 2 & 3 & 4 &

this accent mark indicates the notes should be played louder

Ex. 4

Ex. 5

1 trip let 2 trip let 3 trip let 4 trip let 1 trip let 2 trip let 3 trip let 4 trip let

tonic accent

Tonic accent is performed by playing a periodic series of notes higher or lower in pitch, by periodic repetition of a particular note, or periodic repetition of a group of notes. In tonic accent, some of the notes in the secondary melodies may not be syncopated (on the "&" part of the beat).

timbrel accent

Timbrel accent is performed by playing a note with a noticeably different tone quality.

* = down on wah pedal

agogic accent

Agogic accent is performed by increasing the duration of a note or chord.

- ← This staccato mark indicates notes played half as long as written, with the remainder of the note value silent
- ← This legato mark indicates notes played as long as possible within their time value, minimizing the pause before the next note.

This melody was implied by the legato notes above

this study will primarily involve dynamic accent

Syncopation

Traditionally, the accent is on the beat. Previous to Blues, Jazz and Rock, notes were normally played stronger on the beat. Notes on the beat were usually played slightly louder and slightly accented.

Metric syncopation is the accenting of offbeat notes. When notes are played on subdivisions of the beat other than the beginning, they are called syncopated notes, since they are synchronized, but not on the beat. Accenting the offbeats can be done three ways (this symbol ">" indicates accent):

rest syncopation

When an offbeat note is followed by a rest (a silence):

sustain syncopation

When an offbeat note is sustained onto the next beat:

dynamic syncopation

When an offbeat note is followed by a lesser accent on the next beat:

compound syncopation

Compound syncopation employs accents on parts of the beat other than at the beginning of a compound subdivision. Compound syncopation occurs *only* in compound subdivision, where the normal dynamic accents are on each subdivision.

- In *duple subdivision*, there are two equally spaced dynamic accents. Here is an example of compound syncopation on duple subdivision:

- In *triple subdivision*, there are three equally spaced dynamic accents. Here is an example of compound syncopation on triple subdivision:

Rhythmic Displacement

A *theme* (or *hook*) is a musical idea that is a main subject in a composition. Themes usually repeat throughout a piece of music and can be used with variations.

An *accompaniment part* is the musical background for a vocalist, instrumental soloist or group of instrumental soloists. A rhythm guitar part, for example, is an accompaniment part.

A *rhythmic theme* is solely the rhythmic element in a theme or accompaniment part. It does not involve pitch. See the examples below:

<p>(a) Theme (with pitch)</p>	<p>Rhythmic theme (without pitch)</p>
<p>(b) Accompaniment part</p>	<p>Rhythmic theme (without pitch)</p>

Each note in a rhythmic theme is a *thematic accent*. Thematic accents do not necessarily occur on the beat. They express the characteristic rhythmic themes of a song (without pitch).

Rhythmic displacement is where a note or series of notes is moved in time so it starts earlier or later than the original version. In rhythmic displacement, note values are not changed.

Musical time is divided into regular segments called *beats*. Each beat is indicated by (1) the regular “pulsing” heard within a piece of music, (2) the downward movement of the foot in keeping time to a piece of music, or (3) the downward movement of a conductor’s hand. Beats are usually counted with whole numbers: “one-two-three”, “one-two-three-four”, or “one-two”, etc., depending on the grouping.

Offbeat notes are those not played on the beat. In European Classical (or “Art”) music offbeat notes are generally played weaker (slightly softer, unaccented or both) than notes on the beat. Offbeat notes played with stronger emphasis are **syncopated**. Rock music incorporates much syncopation.

Phrasing

phrase defined

A *phrase* is a section of a melody. Poetry and speech are given form by subdivisions. When someone speaks without pauses and punctuation, it sounds like babbling. Melody also must have form. Just as letters make syllables and syllables make words in speech, notes make motifs (“riffs” or “licks”), and motifs make phrases.

There is usually a pause between phrases, either a rest or a sustained note. A phrase can start on any part of a measure. To sound resolved, a phrase often ends on a note of the current chord. If it does not, it can suggest a need for resolution.

beginning the phrase on, before or after the first beat

Each phrase of a melody begins in relation to the rhythm of the accompaniment. The melodic phrase may begin on the first beat of a chord, before, or after. This diversity gives the music texture and makes it more interesting for the listener.

On the first beat of the chord. In this case, the first note is most often a chord tone. If the first note is not a chord tone, it is almost always short and resolves by playing a chord tone of equal or longer length immediately afterwards.

Anticipated: before the first beat of the chord. When a phrase begins before the first beat of a chord, it anticipates (or leads into) the chord. The anticipated phrase may either (a) introduce the sound of the chord immediately before the chord actually begins or (b) play tones that create a dissonance (not in the upcoming chord) to be resolved in consonance when the chord begins.

Delayed: after the first beat of the chord. When a phrase starts after the chord has already begun, it usually produces an effect of *statement and response*; the chord makes a statement when it begins and the phrase follows by answering. This melodic pause on the first beat of the chord could be thought of as an *accented rest*: melody conspicuous in its absence.

To reinforce the statement and response effect, the chord may be played with a particular rhythmic theme followed by the same rhythmic theme (or a variation in the same rhythmic theme) played at the beginning of the delayed phrase.

ending the phrase and connecting phrases

Phrases also end in relation to the chord in the accompaniment. It may end on a chord tone, an added chord tone, or a non-chordal tone. This diversity gives the music color.

On a chord tone. Ending the phrase on a chord tone produces the most resolved sound.

On a non-chordal tone. A non-chordal tone is a melody note which is not one of the chord tones being played by the accompaniment.

- ♦ *Ending on a dissonant non-chordal tone* produces the feeling of irresolution and calls for an immediate chordal tone.
- ♦ *Ending on an added harmony of the chord.* Some ending notes harmonize (sound consonant or resolved) when added to a chord, even though they are not actually played by the accompanying instruments. These ending notes are colorful. Different added harmonies are appropriate to each style in which they are used. Heavy Metal tends to use simple added harmonies, (like adding a 9th to a major or minor chord), while Jazz uses added upper harmonies such as, 11ths, 13ths and uncommon altered tones.

Phrase-end concealment. You can conceal the end of a phrase by playing a short motif (riff) to connect the end of one phrase to the beginning of another, leaving no break between them. This short connecting motif may be employed in three ways:

- ♦ *Destroying the end of the first phrase* by changing the melodic structure (somewhat drastically) and leading into the next phrase. In this case, the connecting motif is not part of the next phrase. The end of the first phrase should sound as if it were abandoned before it could finish, then the second phrase should start immediately so as to not lose the melodic continuity.
- ♦ *By phrase linkage*, where the boundary between phrases is bridged with a note or motif that is relevant to the melodic structure of both phrases. To bridge the boundary in this manner, the end of the former phrase and the beginning of the next phrase must have similar melodic structure. The connecting note or motif should sound like it could belong to either phrase.

- ♦ *By phrase overlapping*, where a different instrument picks up the melody at the second phrase. The second soloist would simultaneously play the last few notes of the first soloists phrase and use those notes as the beginning of a new phrase. Thus, both soloists play the overlapping notes. The overlapping notes should sound like they belong to either phrase.

melodic contour and drive

If you were to write a melody down on the staff and connect the note heads with a continuous line, you would recognize what is referred to as the “melodic line” or “melodic curve”. This line has an architecture, or contour.

Horizontal and vertical basis. Horizontally (in time), melody tends to use rhythms based on the accompaniment but at a faster level. Therefore, it is good to study the rhythmic activity in the accompaniment parts.

Vertically (in reference to pitch), melody elaborates on the chordal structure of the accompaniment. It is very useful to study arpeggios representing the chord progression in each area of the fretboard you wish to solo.

Primary melodic tones. If a melody were reduced to its most basic component, this would be the sustained and/or emphasized chord tones. They are the “backbone” of any melody in homophonic music (melody with a chordal accompaniment).

Connecting tones. The second most basic components in a melody are the non-chordal tones which connect the chordal tones.

Repetition of single notes or motifs (riffs or themes). Repeated notes are similar in effect to sustained notes. The primary difference between repeating a note and sustaining it is in the rhythmic effect.

Association (artistic expression regarding the rest of life) is a basic component of art, especially since the age of perspective born in the Renaissance. Since music is not very capable of relating to the rest of the world (except by lyrics, which are only associated with the music), repeating a motif is one of the most common musical solutions.

Music without repetition is extremely rare and generally unliked. Music with little repetition is very hard for most people to listen to. In homophonic music, repetition is achieved through theme and variations. In Polyphony (including Counterpoint), repetition is derived through imitation. A common form of imitation in improvised solos is theme and variations, where a theme is introduced and then elaborated upon.

Ornamentation is improvised combination of the other three components. It generally decorates a melody with quick notes, whereas the other components are the melody. Once the main scheme of the melody has been established by the three components above, ornamentation may be added which goes

beyond what is necessary to connect the chord tones and provide enough repetition to sustain interest for the listener.

elements of tension and their effect on the melodic line or curve

Tension is a fundamental force in the “drive” or lifeblood of a melody. Like a great wave, a melody moves toward a goal, attains the goal in a climax and recedes. Increase the tension to build the emotive effect of the melody, climax it to drive the point of the melody home and decrease the tension at the end to provide contrast to the climax.

Melodies are not always culminated. Sometimes they are intentionally interrupted by the entry of another melody or section. At other times they begin half way through, as they interrupt another melody or section of music.

A simple melody tends to have a visually simple curve and a complex melody a complex curve. A single melodic curve can continue through two or more sections of accompaniment, but is less likely to do so if the accompaniment sections are vastly different.

Certain notes may be very effective in the melody, particularly the highest note to be used. Overuse of any note, however, can bore the listener and render the note impotent.

Ascent and descent. Generally, upward movement in the pitch of a melody increases tension and downward movement decreases tension. The lower range of an instrument can increase tension in special cases where the instrument is very noticeable due to a conspicuously different timbre in that range or the lack of other instruments in the same range.

The ascent and descent usually occur with a curve or curves involving scale runs. Connecting the note heads on the staff, as suggested previously, would make these curves apparent.

Filling in involves an ascending skip followed by a descent or a descending skip followed by an ascent. When higher or lower range is desired with few notes, skips are not filled in. Running up or down an arpeggio will produce a series of skips.

If a melody begins too high, it has no room to develop unless the instrument is capable of tension in the low range. A melody usually doesn't end on its highest note, unless the melody was intentionally interrupted. It should climax, then drop off at the end.

Change of rhythm can also increase tension. Diversity of rhythms is generally good: changing from eighth notes to eighth note triplets to dotted eighths, etc. However, too much diversity can disrupt the rhythmic continuity of the solo. Generally, less diversity of rhythms is used at faster tempos and more at slower tempos.

The rhythmic element in a solo is the heart of a solo and unifies the other elements, but it should not be expected to stand alone; the other elements must also have content.

Change of timbre or dynamics can increase tension, especially in Rock guitar music. Bright, harsh timbre and high volume are characteristic of Rock music, but are useless unless they are presented in contrast to soft timbre and low volume. Don't start your solo with screeching treble and with the volume "cranked to the max" or you won't have any room for contrast.

Longer phrases or less separation between phrases can intensify the solo if not overused. Longer phrases must have interesting phrasing, rhythmic vitality, and fresh ideas to sustain the listener's attention. Less separation between phrases can be effective only if each phrase is creating enough excitement that the listener is anxious to hear the next one.

More dissonant skips, chord sounds or scale sounds can all be effective in building tension in the solo, but they must be appropriate to the style and played in such a way that they contribute to the movement of the melodic line.

Change of accompaniment. The following changes in the accompaniment parts can, by contrast, build tension in the solo.

- ♦ **Faster tempo builds tension**, but slower tempo can build tension if the dynamics become stronger through louder and/or more accented accompaniment.
- ♦ **Thickness of the harmonic texture builds tension** if it doesn't overpower the melody. Thicker texture is created by the accompaniment when it employs more notes and/or dissonance. Thinner harmonic texture can build tension if the dynamics become stronger.
- ♦ **The relationship between melodic rhythm, harmonic rhythm and meter** can also build tension.

Meter is the basic pulse (or beat) of the music. It refers to the grouping of beats as indicated by the time signature, such as four quarter notes per measure in 4/4 time.

Melodic rhythm is the character of the rhythm set down by the soloist in relation to the meter. *Harmonic rhythm* is the character of the rhythm set down by the accompanists in relation to the meter.

Melodic rhythm, harmonic rhythm and meter in rhythmic unison is usually used for special emphasis in expressing a short rhythmic theme. Overuse of this can be boring.

When the harmonic rhythm and the meter are the same and the melodic rhythm is different, the melody is freer to express without distraction. This is the most common configuration of these three rhythmic elements.

Melodic and harmonic rhythm are sometimes joined together against the meter to play a short syncopated (or otherwise rhythmically abnormal) theme.

Melodic rhythm and meter are occasionally the same, while a different rhythm in the accompaniment is used. In this case, the melody “takes the back seat” rhythmically, allowing the accompaniment to make a rhythmic statement. This technique of arrangement is often overlooked, but very useful for diversity.

Internal Accent and Secondary Meter

In duple time, where notes of equal time value are metrically (according to the beat) grouped by twos and fours, play three-note groups. If you start a sequence of three note groups on the beat in duple time, the three note group will begin on the beat every twelve notes. In a sense, this creates a secondary meter.

In triple time, where the notes of equal time value are metrically (according to the beat) grouped by threes, play four-note groups. If you start a sequence of four-note groups on the beat in triple time, the four note group will begin on the beat every twelve notes.

Similarly, a five-note group (of equal time value) in triple time will start on the same part of the beat every fifteen notes. A seven-note group in triple time, every twenty-one notes. The formula is: multiply the parts per beat by the notes in the group.

Internal accent may also be applied by playing short themes of equal length. Each repeated theme needs to be two and one half beats long or three beats long, etc. It helps greatly if the repeated themes are identical rhythmically.

Polyrhythm

secondary meter by internal accent

Polyrhythms can be simultaneous different subdivisions which are not multiples of one another, such as two subdivisions per beat for one instrument and three subdivisions for another. These create ratios like “three against two” and “three against four.”

Look at the second bar below. The instrument on the top staff plays three notes during every two beats, while the instrument on the bottom staff plays two notes every two beats. This creates a three against two ratio.

simultaneous multiple time signatures

Polyrhythm can be multiple time signatures with commonality in pulse.

RHYTHMIC THEME AND VARIATION

See the chapter [Theme and Variation/Rhythmic Theme and Variation](#).

Rhythmic Selection From A Regular Pulse

Rhythms are traditionally selected from a regular pulse that represents the beat.

Syncopation

Syncopation is the emphasis of notes not on the beat, followed by either a sustain onto the next beat (most often written with a tie), or a silence on the next beat (a rest). Sustain syncopation sustains onto the next beat, while rest syncopation is followed by a rest on the next beat.

Rhythmic Words

Conceived primarily in terms of three or four pulses per beat, rhythmic words constitute all of the possible selections from those parts of the beat. All of these should be progressively memorized, beginning with those rhythmic words that have no rests (silences). There are eight four pulse rhythmic words without silences and four three-pulse rhythmic words without silences. See [Rhythmic Words and Comping](#)

The Rhythmic Theme

While a melodic curve has the two components of pitch and time. Rhythmic themes may seem simpler, but they have many subtle components. Rhythmic themes have a relation to the meter (beat). They involve selection from a regular pulse, rhythmic words and rhythmic concepts, such as syncopation, pickups and polyrhythm. See [Rhythmic Words and Comping/Melodic Rhythms Contents, Building Melodic Rhythms](#) and [Comping Rhythms Contents](#).

Metric Placement And Beat Subdivision

Rhythmic themes are placed in time in relation to the beat. Meter is the regular structure of beats in units, such as four beats to the measure (bar and measure mean the same thing). You, the other musicians and the audience all need to be imagining the same regular pulse and its subdivisions. In duple time, beats are subdivided into two parts: there are two equally spaced pulses on each beat called the downbeat and upbeat. In triple time, beats are subdivided into three parts: there are three equally spaced pulses on each beat. In swing time, there are three parts per beat conceptually, but you focus on hearing the first and third parts of each beat.

Pickups

Pickups involve groups of notes rhythmically located immediately before the first beat of a chord (most commonly where the first beat of the chord is on the first beat of the bar). They can be regular, such as four sixteenth notes, or irregular, such as a combination of eighth and sixteenth notes. In common time (4/4), sixteenth notes are a quarter beat each and eighth notes are a half beat each.

Polyrhythm

Polyrhythm is two or more simultaneous subdivisions of the beat. It is common to African and Afro-Latin music.

Rhythmic Displacement

Rhythmic displacement retains the relative spacing between notes in a rhythmic theme, but moves in forward or backward in time.

RHYTHMIC COMPOSITES AND ENSEMBLE RHYTHMS

Rhythmic composites and ensemble rhythms both combine parts. Rhythmic composites combine existing rhythms, while ensemble rhythms are composed or improvised, intentionally planning the parts to go together.

Rhythmic Composites

When you take the existing parts of an arrangement and figure out how to put them together, such as listening to the snare and kick drums on a song and representing them on you guitar (with thumb bass and index strum, for example), you are compositing the rhythms together.

Ensemble Rhythms

When you thoughtfully compose parts so they fit together, some of the beats or parts of beats designated to one part (or one instrument) and other beats or parts of beats designated to another instrument, you are creating ensemble rhythms.

An Afro-Latin percussion ensemble is a great example of this.

PROGRESSIVE IMPROV STUDY

Decide which scale, arpeggio or melodic cell you want to use. Those can be called note sets.

Determine the available time, usually in beats.

Anticipate the number of notes you can play, given how many notes per beat are practical.

Determine a melodic rhythm, usually starting with a regular pulse.

As you progress, you usually want to make the rhythm and starting point for the note set more abstract, such as not starting on the beat and not starting on the root.

Work with pickups of one or more notes. Pickups should be of equal value first (or swing eighths), then more complex, using rhythmic words. Pickups don't have to lead into the first beat. They can lead into any beat, though it's usually best to start studying them in relation to the first beat.

Work with starting notes (notes that start the phrase). Starting on a non-chordal tone creates tension and is usually effective. For example, start with a one note pickup to beat two (starting on the "and" of one, which is the "and" after one) with a lower chromatic embellishment to a chord tone. On a Cma7 chord, start on the "and" of one with a D#, a half step below the "E" chord tone.

Start with one element like a scale, arpeggio or a single type of melodic cell before progressively mixing them.

Usually end your phrase on a chord tone. So, learn which current chord tones are in the scale (or note set).

ONE PENTATONIC TYPE IN A SINGLE KEY

The most common approach to using scales in blues and rock is to use a single pentatonic scale type in a single key. We need to represent the sound of the key and the sound of most chords. Many chords can be represented with the key major or key minor pentatonic.

Music Happens over Time

The melody does not have to harmonize perfectly with the chords on every beat. It would be too predictable and boring if it did. Music just has to make sense over time. If you were to take an audio "snapshot" of certain beats during a melody, there might be an awful dissonance. But, this is not a problem if you hear where the melody is going. Where a chord does not harmonize, it may be predicting the sound of the *next* chord.

The Key Major or Minor Triad Added to Other Chords

The major or minor triad that is the basis of the pentatonic scale can sound along with many of the chords in the progression to suggest a more colorful version of each chord.

an A minor triad as part of three other chords

The image displays a musical score for the song "The Sound of Silence" by Simon & Garfunkel. The score is written for guitar and bass, with a key signature of one sharp (F#) and a 4/4 time signature. The guitar part is in the treble clef, and the bass part is in the bass clef. The score is divided into four measures, each with a specific chord diagram and a corresponding tablature line.

Measure 1: The chord diagram shows an A minor (Am) chord with a V (5th) position. The guitar part starts with a treble rest and a bass eighth-note pattern: G4, A4, B4, C5, B4, A4, G4. The bass part has a treble rest and a bass line: G2, A2, B2, C3, B2, A2, G2. The tablature for the guitar shows a sequence of 5s, and the bass tablature shows a sequence of 7s.

Measure 2: The chord diagram shows a C6 chord with a III (3rd) position. The guitar part has a treble rest and a bass eighth-note pattern: G4, A4, B4, C5, B4, A4, G4. The bass part has a treble rest and a bass line: G2, A2, B2, C3, B2, A2, G2. The tablature for the guitar shows a sequence of 5s, and the bass tablature shows a sequence of 3s.

Measure 3: The chord diagram shows an F major 7 (Fmaj7) chord with a V (5th) position. The guitar part has a treble rest and a bass eighth-note pattern: G4, A4, B4, C5, B4, A4, G4. The bass part has a treble rest and a bass line: G2, A2, B2, C3, B2, A2, G2. The tablature for the guitar shows a sequence of 5s, and the bass tablature shows a sequence of 8s.

Measure 4: The chord diagram shows a D minor 9 (Dm9) chord with a III (3rd) position. The guitar part has a treble rest and a bass eighth-note pattern: G4, A4, B4, C5, B4, A4, G4. The bass part has a treble rest and a bass line: G2, A2, B2, C3, B2, A2, G2. The tablature for the guitar shows a sequence of 5s, and the bass tablature shows a sequence of 5s.

Transitional Chords Not Represented

Some chords in a progression can be ignored and can function as connecting chords. For example, in the chord progression Cm Bb Ab Bb (two beats each), the Cm chord can be sounded during the Ab to suggest Ab major 7 (which includes the notes of Cm). The “Bb” chord can be ignored and considered to connect the other chords. In the Hendrix style solo example linked below, the main source of notes is the C minor pentatonic scale. The notes of the Bb chord are played as a group only in bars 37, 39 and 41.

Hendrix style solo example (in the last section of this chapter)

LEARN TO PLAY IN FIVE OCTAVE SHAPES

Why Study Pentatonic in Five Octave Shapes?

Links To Video Examples

[Why Study Pentatonic in Five Octave Shapes](#)

[A minor Pentatonic: Open Position and Five Fingerings](#)

[C major Pentatonic: Open Position and Five Fingerings](#)

To be able to play fluently in one key all over the fretboard and to play fluently in multiple keys in one position, you need to know pentatonic scale fingerings and be able to improvise with them in all five octave shapes. See [Pentatonic Scales and Octave Shapes](#).

Learn To Play Different Pentatonic Types

The focus should be on key scale improv, but the type of key scale can change to make your improv more colorful. Buy Ireal Pro, if you don't already have it. It is an essential study tool that shows chord progression and plays an accompaniment to jam to with variable tempo and variable key. I especially like turning off the bass and chording instruments, just using the drums and the real time chord chart along with live rhythm guitar. See [Pentatonic Scales](#) (in the [Primary Scales, Chords And Arpeggios](#) chapter).

MIXED PENTATONIC TYPES IN A PHRASE

Blues and rock melody commonly mixes major and minor pentatonic, add their variants. This is the basis of T-Bone Walker's and of B.B. King's melodic style which was passed on to Eric Clapton, Mike Bloomfield, Peter Green Duke Robillard and then to Neal Schon, Angus Young, Brian Setzer. It also developed in sax improv, like Shotgun and in blues rock and R & B vocals like Purple Haze, Duke Robillard calls the B.B. King variety "uptown blues".

Its interesting that some guitarists rarely mixed major and minor pentatonic. Albert King only used minor pentatonic in his guitar solos. Hendrix used minor pentatonic most of the time in his guitar solos, and occasionally used major pentatonic (Wind Cries Mary, May This Be Love). Jimi mixed them on Red House, probably channeling some B.B. King and T.Bone Walker.

major and minor pentatonic blues example in C

Swing Eighthths

The musical score is written for guitar in 4/4 time, featuring a mix of major and minor pentatonic scales in C major. The score is divided into three systems, each with a treble clef staff and a tablature staff. The first system (measures 1-4) starts with a C7 chord and includes a triplet of eighth notes (8, 10, 8) and various bends (full, 1/2). The second system (measures 5-8) includes an F chord and continues with bends and scale runs. The third system (measures 9-12) includes G7 and F7 chords, ending with a triplet of eighth notes (10, 10, 8).

MINOR PENTATONIC ADD TWO

In the first complete bar of the [Hendrix style solo example](#) (in the solo examples section at the end of this chapter), a note is bent four times. The example is primarily using the C minor pentatonic scale, but adds “D”, the second tone of a D major scale to the pentatonic. Minor pentatonic has tones 1-b3-4-5-b7. Colorful blues rock artists like Hendrix and Santana have heard the added second in jazz and adapted it to their music.

Melody in popular songs typically adds the second to a minor pentatonic scale, in the Red Hot Chili Pepper’s songs, for example.

MAJOR PENTATONIC ADD FOUR

As with adding two to minor pentatonic, when four is added to major pentatonic it is usually not treated as a scale tone, but four is used as a neighboring to the adjacent tones five or three. If a scale is ascended or descended quickly, it does not include “four”. Here is a swing blues example, with the scale tones numbered below the notes:

BLUES LICK ELEMENTS

In preparing to write an introduction to blues phrases, it was difficult to find a way to summarize them. There are so many blues licks. How does a guitarist build their improv with meaningful phrases that aren't just fast scales or the same worn-out licks? It occurred to me that there are archetypal elements to blues phrases. What are the categories?

I created this list by listening to classic blues rock guitar solos and describing categories of what I heard. Once I got up to eight elements, phrases of every additional solo. I listened to could be described with one of these elements.

1. [interesting rhythm and phrasing](#)
2. [major and minor arpeggio tones with bends](#) (also chords with b7)
3. [pentatonic scales with bends, resolving to chord tones](#)
4. [elaborating pentatonic scales with chromatics or heptatonic tones](#)
5. [cadences \(IV-I, V-I, bVI-V\)](#)
6. [slurred minor third](#): slur to b3 or three while sounding 5, slur 4 to 5 while sounding b7
7. [pivot tone](#) (usually a chord tone with a well-chosen "anchor" finger)
8. [turn with bend](#) (bend, release, pull off hammer between two fretted notes)

Interesting Rhythm and Phrasing

rhythm is more important than pitch

In American improvisational music (blues, folk, jazz, rock), rhythm is more important than pitch. It is a good strategy to think a good melodic rhythm first, then fill it with an appropriate pitch structure.

using rhythmic strumming to conceive melodic rhythm

Study the chapter on [Rhythmic Words and Comping](#) and these melodic rhythms: [triplet & 16th, 2-5 note, 6 note](#). Develop the ability to strum a rhythm on a chord or muted chord, then progressively narrow your strumming stroke until you are applying it to a single string. Finally move the rhythmic through the notes of a scale or arpeggio.

rhythmic displacement

Learn a phrase of regularly-pulsed notes like all eighth notes (two per beat), all triplets (three per beat) or sixteenths (four per beat). Then re-learn the phrase played earlier in time so the second note is on

the first beat. Then again so the third note is on the first beat, then the fourth note. This will develop your ability to play phrases with *pickups*, notes before the first beat.

Also practice playing phrases of regularly-pulsed notes where the first note is on the second division of the first beat of a bar, then on the third division, and so on.

The listener tends to hear what the groups that happen on each beat, so rhythmic displacement creates a melodic variation, a new melody of sorts.

pitch grouping versus metric grouping

Pitch grouping can be defined by groups of notes that linearly ascend or descend, like a “1-2-3-4” fragment pattern played from each ascending scale tone or a “4-3-2-1” fragment played from each descending scale tone. If a four-note fragment like 1-2-3-4 is played on each beat with four divisions per beat, it is very predictable and potentially not stimulating to hear. If instead to play the four note fragment (like 1-2-3-4) in triplets, where each beat is divided into three parts, it will create a new melody for the listener. As with rhythmic displacement, the listener tends to hear what the groups that happen on each beat.

Major And Minor Arpeggio Tones with Bends

archetypal blues licks are based on chord tones

The most fundamental blues licks heavily use five and one, sometimes flat three or three. These are understandable to the widest audience and you must know them. Be inventive rhythmically to compensate for the simple pitch basis.

With minor pentatonic on minor chords, bend flat seven to one, one to flat three and four to five. With major pentatonic on major chords, bend two to three, four to five, flat seven to one. To retain the major pentatonic scale, play the four or flat seven as a grace note, playing each briefly and immediately bending up to the respective chord tone five or one above it. Four is commonly added to the major pentatonic as a neighboring tone.

the howl or cry of a minor third

Dominant seventh and minor seventh chords are often used in blues, each having a flat seven. Use the fifth of the minor pentatonic to bend to the flattened seventh. The large minor third interval emotes a cry or howl. Likewise, bending one to flat three is a crying minor third.

Pentatonic Scales with Bends Resolving to Chord Tones

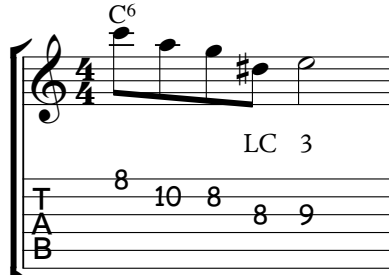

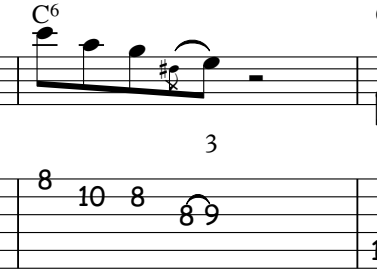

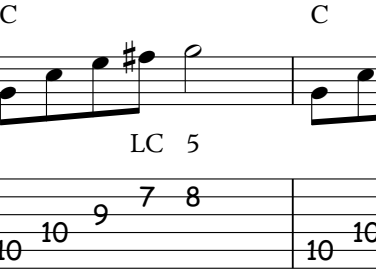

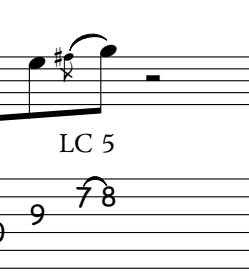

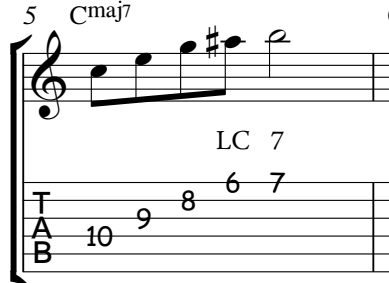

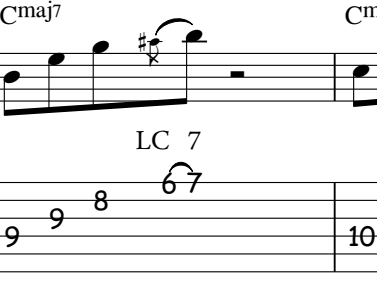

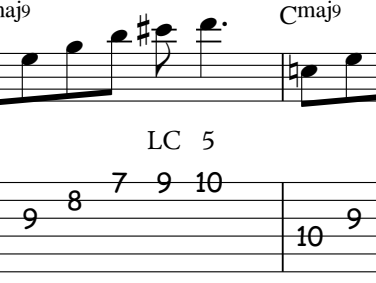

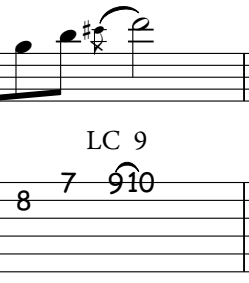

Scale runs are used in blues with bends to the same chord tones discussed in the previous section [Minor and Major Arpeggios with Bends](#). Bends can also be made to any scale tone, but non-chordal scale tones should generally be given a short duration and be otherwise un-emphasized.

Elaborating Pentatonic Scales with Chromatics and Heptatonic

lower chromatic embellishment of 3, 5, 6 and 9 (2)

Precede 3, 5, 6 or 9 with a note a half step below it, called a lower chromatic embellishment. In the ragtime era, the lower chromatic was commonly given a duration to the note it preceded. It has become more fashionable in modern blues to play the lower chromatic briefly, also (for guitarists) to slur it to the note by hammering or bending.

[link to video](#)

A grace note duration for a note chromatically between a whole step would not be a passing chromatic, but rather a lower or upper chromatic embellishment. With grace note durations, chromatics between a whole step would be used in ascending, unless for a diminished seventh. In descending chromatically, diminished seventh is the only chord (so far) which the listener can understand an “upper chromatic embellishment”.

two or three passing chromatics

These include three to five (3-4-#4-5 or 5-b5-4-3), flat three to five (#2-3-4-#4-5 or 5-b5-4-#2-3), five to flat seven (5-#5-6-b7 or b7-6-b6-5) and rarely six to one (6-#6-7-1 or 2-7-b7-6). Traditionally, when descending chromatically from five to three, it is preferred to play sharp two before three.

add tones to complete Dorian or Mixolydian

Based primarily on pentatonic scales, blues and blues rock guitar improvisation, sometimes uses three or four-note heptatonic (seven tone scale) passages, adding tones to pentatonic scales.

In the blue and rock use of minor pentatonic, the most common added tone is two. Six or flat six can also be added to minor pentatonic scale melody. In the blues, rock and country use of major pentatonic, the most common added tone is four. Flat seven or seven can also be added to major pentatonic scale melody.

Turn with Bend

This common ornamentation involves in this order: bend, release, pull off hammer between two fretted notes.

[link to video](#)

Swing Eighths

The musical notation for "Swing Eighths" is presented in 4/4 time. The guitar staff shows a sequence of notes: a whole rest in the first measure, followed by eighth notes in the second measure (fretted at 10, 10, 8, 10, 8, 5), eighth notes in the third measure (fretted at 8, 8, 5, 8, 5, 5), and eighth notes in the fourth measure (fretted at 8, 8, 5, 8, 5, 5). The tablature staff shows the corresponding fret numbers: 10, (10), 8, 10, 8, 5, 8, (8), 5, 8, 5, 5, 8, (8), 5, 8, 5, 5, 5. The notation includes bends (indicated by a 'b' and a curved arrow) and triplets (indicated by a '3' and a bracket). The bends are labeled 'full' and the triplets are labeled '1/4'.

descending scalar sixths - video tab

Two musical systems for descending scalar sixths. The first system is for A7 (three sharps) and the second is for D7 (two sharps). Each system includes a treble clef staff with notes and a guitar tab staff with fret numbers. The A7 system has four measures, and the D7 system has four measures. The tab staff for A7 shows fret numbers: 5, 7, 9, 9, 7, 6, 6, 7, 6, 6, 8, 7, 7, 5. The D7 system shows fret numbers: 5, 7, 9, 8, 5, 7, 5, 7, 5, 5, 7, 10, 10, 8, 7, 7, 5.

1 b7 6 5 - video tab

A musical system for the 1 b7 6 5 scale. It includes a treble clef staff with notes and a guitar tab staff with fret numbers. The system is divided into two parts: A7 (three sharps) and D7 (two sharps). The A7 part has two measures, and the D7 part has two measures. The tab staff for A7 shows fret numbers: 5, 6, 5, 5, 8, 7, 5, 7, 5. The D7 part shows fret numbers: 6, 7, 7, 5, 7, 5, 7, 5, 7, 5, 7, 5, 7.

#2 3 4 #4 5 - video tab

A musical system for the #2 3 4 #4 5 scale. It includes a treble clef staff with notes and a guitar tab staff with fret numbers. The system has two measures. The tab staff shows fret numbers: 5, 6, 7, 8, 5, 5, 5, 8, 7, 8, 5, 7, 5, 6.

big ending - video tab

The image displays a musical score for a guitar solo, consisting of two systems of music. Each system includes a standard musical staff with a treble clef and a key signature of two sharps (F# and C#), and a corresponding guitar tablature staff below it. The tablature staff is labeled with 'T' for Treble and 'B' for Bass. The first system spans four measures, and the second system spans five measures. The notation includes various musical symbols such as notes, rests, and accidentals, as well as guitar-specific symbols like fret numbers (e.g., 5, 8, 10, 12, 13, 14) and techniques like bends (indicated by a '1/2' or '1/4' with a curved arrow) and slides (indicated by a horizontal line with a diagonal slash). The piece concludes with a double bar line.

MAJOR SCALE MODES

Four Common Modes

Major, Dorian, Mixolydian and Aeolian are the four commonly used modes of the major scale. Major is the major scale with the tone center on “1”, and is also called Ionian.

Mixolydian can be produced by playing the major scale from “5” to “5”, so “G” to “G” in a C major scale produces G Mixolydian. G Mixolydian can also be produced by flattening the seventh of a G major scale.

Dorian can be produced by playing the major scale from “2” to “2”, so “D” to “D” in a C major scale produces D Dorian. D Dorian is also a D major scale with flat three and flat seven. Rather than a true minor mode, Dorian is used more commonly as a darkening of the major triad based Mixolydian mode, using the bluesy flattened third as well as the flattened seventh.

Aeolian is a true minor mode, also called natural minor. It is freely interchanged with harmonic minor which only differs with its natural seventh. Aeolian can be produced by playing the major scale from “6” to “6”, so “A” to “A” in a C major scale produces A Aeolian. A Aeolian is also an A major scale with flat three, flat six and flat seven.

Modes as Chord Scales

Without distracting too much from the key scale, briefly play a scale named after the current chord, such as a D Dorian scale on a Dm chord while in the key of A minor. It's great when the chord scale is ambiguously the same notes as the key scale, suggesting the chord scale by incorporating an arpeggio of the current chord.

HARMONIC MINOR MODES

Harmonic Minor - [link to video](#)

“A” harmonic minor is built on the sixth step of its parent C major scale, but with the fifth step of the C major scale sharpened. Compared to Aeolian, harmonic minor has a natural seven. Aeolian mode has flat three, flat six and flat seven, while harmonic minor has only flat three and flat six.

5 7 8 5 4 6 5 5 7 5 5 7 8 5 4 6 5 7 4

Phrygian Major- [link to video](#)

Phrygian major is the mode on the fifth step of harmonic minor. E Phrygian major is built on the fifth step of A harmonic minor, which uses the C major parent scale with a sharp five. In terms of its parent major scale, E Phrygian major is the mode on the third step of C major sharp five. E Phrygian major mode has a major third as opposed to the minor third in E Phrygian mode.

MELODIC MINOR MODES

Melodic Minor

Melodic minor is occasionally used as a key scale. It has ascending (upward in pitch) and descending (downward in pitch) versions. In J.S. Bach's Bouree in Em it is used in its ascending and descending versions.

In jazz, melodic minor is used in its ascending form. What would be the descending form is thought of as Aeolian (natural minor), which is the same thing.

E melodic minor

TAB

Melodic Minor in Jazz

In jazz, melodic minor is used in the key of flat six. It is used to setup a chord progression to a target chord, where it is a V of the target chord (G7 is V7 of C). As the V of target, melodic minor makes a very dissonant V chord. I call it the "Swiss Army" seventh chord, since it has *all* the alterations of its fifth and ninth. It has sharp five, flat five, sharp nine and flat nine. The complete, seven-note V chord is V7b9#9b5#5.

To make the Swiss Army seventh chord (V7b9#9b5#5), we use the mode on the seventh step of melodic minor.

chord synonyms

Chord synonyms are two or more chord names for the same notes, each using a different note as a root. The [flat five substitute](#) is a harmonic basis of bebop and modern jazz. It uses the synonyms V7b9#9b5#5 and bII13#11. The basis of these synonyms are V7b5 (of target) and bII7b5 (of target). V7b5 is part of V7b9#9b5#5 and bII7b5 is part of bII13#11.

In the key of C, V7b5 is G7b5, spelled G-B-Db-F. "G, B, Db, F" are 1-3-b5-b7 in the key of "G", the chord root. Also in the key of C, bII7 Db7b5, spelled Db-F-Ab-Cb ("Cb" is the same note as "B").

G7 III	Db7 II	G7b5	Db7b5 II
1 b7 3 5	5 3 b7 1	1 b7 3 b5	b5 3 b7 1
G-B-D-F	Ab-F-Cb-Db	G-B-Db-F	G (Abb)-F-B (Cb)-Db

other synonyms that are subsets of G7b9#9b5#5 and Db13#11

G7#9#5 IX	Db13#11 IX	G7b9#5 III	Db9#11 III
1 3 b7 #2 #5	b5 b7 3 6 2	1 b7 3 #5 b9	#4 3 b7 2 5
G-B-D-A#-D#	G (Abb)-F-Cb-Db	G-F-B-D#-Ab	G -F-Cb-Eb-Ab

Lydian Dominant (Melodic Minor Mode IV)

This mode is built on bII of a target chord. So, Db7 (or any part of Db13#11) can be used immediately before a C major or C minor type chord, to “set it up” and lead into it. Charlie Parker, Dizzy Gillespie and Thelonius Monk (especially Charlie) figured this out in the 1940’s when they were playing at Minton’s Playhouse (and Monroe’s Uptown House) in Harlem, New York. Charlie Christian was a very influential guitar player at Minton’s and was an important musician responsible for the forming of the bebop style.

Minton’s Lingo, below uses melodic minor in the BeBop Style.. It features B melodic minor before Eb7, which is E Lydian dominant (E is bII of the Eb target). Also, it features F# melodic minor before Bb7, which is B Lydian dominant (B is bII of the Bb target).

MAJOR FLAT SIX MODES

Major Flat Six - [link to video](#)

This is the “Sleepwalk” mode. It can be used during the IVm chord in Sleepwalk (Fm in the key of C).

Chords: Cmaj7, Am7, Fm(maj7), G13

Scale: C major flat six

Diagram showing the scale on a staff and a fretboard diagram below it. The fretboard diagram shows the scale notes on the strings: 8, 9, 10, 5, 5, 8, 6, 5, 5, 8, 9, 10, 6, 7.

Dorian Flat Five (Major Flat Six Mode II) - [link to video](#)

A great elaboration of a I diminished seventh. For example, bar six of a jazz blues is often #IV diminished seventh, which is a synonym of I diminished seventh. The key scale I Dorian flat five works well in this situation.

Chords: D9, D#o7, A9

Scale: A Dorian flat five

Diagram showing the scale on a staff and a fretboard diagram below it. The fretboard diagram shows the scale notes on the strings: 5, 5, 7, 8, 7, 7, 8, 7, 5, 8, 7, 8, 7, 7, 8, 8, 7, 5, 5, 5, 10, 8, 10, 9, 10.

Super Phrygian (Major Flat Six Mode III) - [link to video](#)

This is an amazing mode. I'm surprised it is not used more in jazz. It's like Phrygian mode, but has a "proxy" natural three in the form of a flat four. Phrygian major has the tones of a seventh chord with a half step above the root, third and fifth. By comparison, this mode has the notes of a minor seventh with half steps above the root third and fifth.

Swing Sixteenths

Rock Me Baby solo example - [click to play](#)

Rock Me Baby solo example - [click to play](#)

Score for Rock Me Baby solo example, featuring guitar notation and fingerings.

Key signature: One flat (Bb). Tempo: 90.

The score is divided into six systems, each with a treble staff and a bass staff. The treble staff contains the melodic line with various musical notations including eighth notes, quarter notes, and triplets. The bass staff contains the bass line with fingerings and accidentals. Chord symbols (C7, F7, G7) are placed above the staffs to indicate the harmonic context.

The solo begins with a C7 chord and ends with a G7 chord. The bass line is primarily composed of eighth and quarter notes, often with a steady eighth-note pulse. The treble line is more melodic, featuring many triplets and slurs.

Clapton Style Blues Rock Example

The solo is written in G major (one sharp) and consists of 16 measures. The notation includes a standard staff with a treble clef and a guitar-specific staff with a 'T' (treble) and 'B' (bass) indicator. Chords are indicated above the staff: Cma7, G/B, G, D, Cma7, G/B, G, D, Cma7, G/B, G, D, Cma7, G/B, G, D, Am. The tablature includes fret numbers (13, 10, 12, 15, 17, 18, 19) and picking directions (upstrokes and downstrokes). Some measures include a 'practice muted strum for melodic rhythm' instruction. The solo is divided into four systems of four measures each.

Measures 1-4: Cma7, G/B, G, D. Fret numbers: 13, 13, 13, 13, 13, 13, 13, 13, 13, 13, 13, 13, 13, 13, 13, 13. Picking: full, 1/2, full, 1/2, full, full, full, full, full, full, full, full, full, full, full, full.

Measures 5-8: D, Cma7, G/B, G, D, Cma7, G/B, G. Fret numbers: 10, 10, 12, 12, 10, 12, 12, 10, 12, 10, 12, 10, 12, 10, 12, 10. Picking: 1/2, 1/2, full, 1/2, full, 1/4, full, 1/4.

Measures 9-12: D, Cma7, G/B, G, D, Cma7, G/B, G. Fret numbers: 15, 15, 15, 15, 15, 15, 15, 15, 15, 15, 15, 15, 15, 15, 15, 15. Picking: full, full, full, full, full, full, full, full, full, full, full, full, full, full, full, full.

Measures 13-16: D, Cma7, G/B, G, D, Am. Fret numbers: 17, 19, 18, 18, 18, 18, 18, 18, 18, 18, 18, 18, 18, 18, 18, 18. Picking: full, 1/2, 1/2, full, 1/2, full, 1/2, full, full, full, full, full, full, full, full, full.

Autumn Leaves Improv Example

Swing Eighths

The sheet music for "Autumn Leaves" is presented in a system of five staves, each containing a treble clef staff and a bass staff. The key signature is B-flat major (two flats), and the time signature is 4/4. The tempo/style is "Swing Eighths". The music is divided into measures, with measure numbers 5, 9, 13, and 17 indicated at the start of their respective staves. Chord symbols are placed above the treble staff: Cm7, F7, Bbmaj7, Ebmaj7, Am7(b5), D7, and Gm. The bass staff contains fingerings for the left hand, with numbers 1-10 and 12. The right hand staff contains notes, rests, and triplets. The music is a 32-measure piece, with the final measure ending on a double bar line.

CHORD ROOTS

Chord Roots by Letter Name

A chord root is the letter name for a chord. The letter may be followed by a flat or sharp which alters the letter. C13#11, for example has the root "C". "Bb" (B flat) is the root of Bb13#11. When the letter name is not followed by any other characters ("Bb", for example), the chord is major.

Chord Roots by Number

A chord root can also be expressed with a number, showing which numbered step of the key the chord root occurs on. See the chapter [Chord Progression By Number](#). The number may be preceded (not followed as in letter names) by a flat or sharp which alters the numbered step in the key on which the chord is built. IV13#11, for example has the root on the fourth step of the key and its quality is "13#11".

TRIADS

Triads are three-note chords. In the primary method of chord construction, triads use every-other scale tone, each using some version of numbered tones "1", "3" and "5". Suspended triads are the exception, using "1-4-5" or "1-2-5". Triad names imply numbered tones with a word. Nothing after the letter name implies it is major ("Bb" is "B flat major"). The abbreviations below show the other options for triad names.

<u>triad name</u>	<u>abbreviation</u>	<u>numbered tones of a major scale on the chord root</u>
major	(nothing)	1-3-5
minor	m or min.	1-b3-5
diminished	dim. or °	1-b3-b5
augmented	aug. or +	1-3-#5
major flat five	maj. b5	1-3-b5
suspended fourth	sus. 4 or sus.	1-4-5
suspended second	sus. 2	1-2-5

When a triad quality isn't specified, chords assumed to be based on a major triad. When a chord name is shown as just the letter name (A, Bb, B, C, C#, etc.), the chord is major. Suspended chords without a specified "sus4" or "sus2" are suspended fourth. But it will be more universally understood if you write the name "sus4".

Using the degree symbol (°) for a diminished triad is risky, since the degree symbol is commonly used to represent a diminished seventh chord. So, when you write a diminished seventh chord, it will be more universally understood if you include the “7”: “°7”.

TERTIAN CHORDS

Tertian chords are those built in thirds, using the odd-number series “1-3-5-7-9-11-13”. They begin with “1” and may use any number of consecutive tones in the odd-number series.

<u>numbered tones</u>	<u>category</u>	<u>chord name</u>
1-3-5	triad	major, minor, diminished or augmented, depending on the versions of 3 and 5
1-3-5-7	quadrad	seventh
1-3-5-7-9	pentad	ninth
1-3-5-7-9-11	sextad	eleventh
1-3-5-7-9-11-13	septad	thirteenth

ADD-TONE CHORDS

Add-tone chords break the tertian series by adding a second, fourth or sixth where it is not a consecutive tones in the odd-number series. “1-3-5-7-9” is a tertian chord, but “1-3-5-9” is an add-tone chord, since it “skipped” the seventh in the odd-number series. “1-3-5-7-9-11” is a tertian chord with a continuous series of odd numbers, but “1-3-5-11” is an add-tone chord, since it “skipped” the seventh and ninth in the odd-number series.

Sixth Chords (add six)

When the bass part or chord name indicates that the next-to-lowest tone in a series of thirds is the chord root, it is a sixth chord. The series of thirds would be conceived by arranging the chord tones in thirds. Sixth chords can also be names after the lowest tone in the series of thirds, which would make it some type of seventh chord.

C6 IX 	Am7 IX 	Cm6 VIII 	Am7b5 IX
C6 IX 	Am7 IX 	Cm6 VIII 	Am7b5 IX
thirds: A C E G		thirds: A C Eb G	

Add Nine Chords

Ninths can be added to triads and to sixth chords. “/9” designates “add nine”. Adding a ninth to a seventh chord is called a ninth chord and is not considered an “add tone” chord, since it uses continuous odd numbers (1-3-5-7-9).

A/9 V 	Am/9 V 	A6/9 IV 	A dim.7/9 IV
------------------	-------------------	--------------------	-------------------------

Add Eleven Chords

Elevenths can be added to chords. “/11” designates “add eleven”.

Am7/11 III

Multiple Added Tones

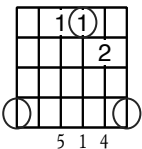

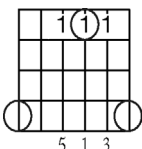

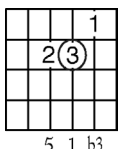

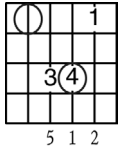

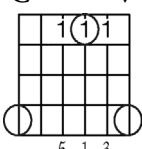

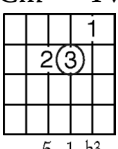

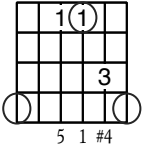

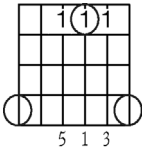

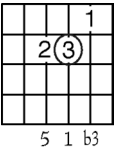

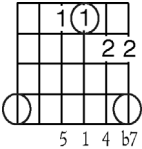

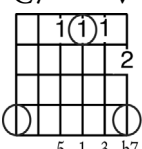

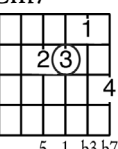

Usually, when you indicate multiple added tones in a chord name, the alternate name would be complicated also. The alternate name usually would have to specify missing tones.

E7/6/#11 IX 	E13#11 n9 IX 	E13#11 n9 IX
fingers		

SUSPENDED CHORDS

Suspended chords have a triad basis but replace the third with a fourth or second, rarely a sharped fourth. The fourth, second or sharped fourth is expected to resolve to the major third, but doesn't have to resolve or it can resolve to the minor third.

Each suspended chord below is traditionally expected to resolve to a major chord on the same root resolving four to three, but it can resolve to a minor chord on the same root. But, they don't have to resolve. Harmonies may be added, such as C7sus4, which behaves like Csus4 but the suspended version and the resolved versions all have a flatted seventh, implied by the "7" in the name. Folk rock often used the sus. 4, major, sus. 2, major sequence (or sus.2, major, sus4, major).

suspended chord type	suspended chord	resolve to major	resolve to minor
suspended fourth	Csus4 V 	C V 	Cm IV 
suspended second	Csus2 III 	C V 	Cm IV 
suspended sharp four	Csus#4 V 	C V 	Cm IV 
7 suspended fourth	C7sus4 V 	C7 V 	Cm7 V 

ALTERED CHORDS

Altered Numbers Versus Altered Scale-Tone Chords

The term "altered chord" commonly refers to chords that modify major scale-tone chords, implying that the major scale is altered. The term also is used to refer to chords with altered numbered tones, more often altered odd-numbered tones. The first chord in each bar below is a major scale tone chord with no alterations. The second chord in each bar has altered major scale tones and is an altered chord *except the* IVma9#11 in the fourth bar, which uses the unaltered "B" note of the C major scale to produce the "#11" tone of the Fma9#11 chord.

♩ = 100

	1	2	3	4	5	6	7
T	8	7	10	10	7	7	8
A	9	9	10	10	8	9	10
B	8	8	5	5	7	7	7

Major Scale-Tone Chords with Altered Numbered Tones

The common definition gets unclear when considering some major scale-tone chords that have altered numbers. A major scale-tone chord can have altered numbered tones *without altering the major scale*. The seventh chord (a tertian quadrad or four-note chord in thirds) built on the seventh step of the major scale is minor seven flat five *without altering the major scale*. The eleventh chord (a tertian sextad or six-note chord in thirds) built on the fourth step of the major scale is major nine sharp eleven and does not alter the major scale. If one thinks that a chord tone with sharpened or flatted numbers is an altered chord, VII minor seventh flat five and IV major ninth sharp eleven could be called "altered chords" since they each have flatted or sharpened numbered tones. C major scale has all natural notes, so any sharpened or flatted note would be an altered C major scale tone. As you can see below, the Fma9#11 and Bm7b5 each have all natural notes of the C major scale, yet when each is analyzed in terms of the chord root, which is how we name chords, each chord has an altered tone.

	Fma9#11	Bm7b5
T	7	6
A	8	7
B	8	7

In keys other than C, when a chord uses a note not in the major scale of the key, it is an altered major scale-tone chord in that key.

Chords That Alter the Major Scale Are Scale Tone Chord of Other Scales

Most altered chords that alter the major scale are scale tone chord of other scales. There are four harmonizable seven tone (heptatonic) scales: major scale (also called Ionian mode), harmonic minor (a mode of major sharp five), melodic minor (ascending form, which is major scale flat three) and major flat six (also called harmonic major). See [Modes/Modes of Four Heptatonic Scales](#) and [All Scale-Tone Chords](#). The melodic minor scale traditionally used in classical music ascending as a major scale with flat three and descends as a major scale with flat three, flat six and flat seven (Aeolian mode).

Scale-tone chords of each of the four harmonizable heptatonic tonic scales include chords with altered numbered tones. The table on [All Scale-Tone Chords/Major Scale Tone Chords by Type](#) shows chords with altered numbered tones in the IV column and in the VII column, although by definition, none of the chords shown in that table alter the major scale.. This shows that major scale-tone chords can have altered numbered tones without altering the the major scale. Scale tone chords of the other three harmonizable heptatonic scales also have altered tones. See:

[Harmonic Minor Scale-Tone Chords by Type](#)

[Melodic Minor Scale-Tone Chords by Type](#)

[Harmonic Major Scale-Tone Chords by Type](#)

Common Altered Scale-Tone Chords

IV and VII chords of the major scale

II, V and I of harmonic minor

I, IV, V, VI VII of melodic minor

all the steps of harmonic major have some use, though uncommon

Altered Chords Not Entirely Part of Any Heptatonic Scale

Some altered chords have multiple versions of a numbered tone and are not entirely part of any heptatonic scale. 13#11b9#9, for example is the harmonized version of the half-whole diminished scale and contains all eight of its notes. In its entirety, it is not playable on the guitar as a simultaneous-note chord, of course.

CHORD QUALITIES CURRENTLY NOT ACCEPTABLE

Because of dissonances considered inappropriate for the chord type, a few chord qualities are currently not acceptable. You may find an application to some of these "unacceptable" chord qualities in the wide world of artistic expression, but you won't find these chords in standard repertoire.

Major Seventh Type Chords Aren't Used with Natural Eleven

Major seventh, major ninth and major thirteenth chords are not used with a natural eleven, because of its dissonance against the major third, which is a half step away in the upper octave. Major third plus an octave is major tenth, which is a half step away from the natural eleventh. The Lydian chords $ma7\#11$, $ma9\#11$ and $ma13\#11$ are acceptable.

Major Seventh Type Chords Aren't Used with Altered Ninths

$Ma7$, $ma7\#11$ and $ma13\#11$ thirteenth chords are not used with a flat nine or sharp nine, probably because the striking dark mode the altered ninth would introduce to the otherwise romantic chords.

Minor Chords Never Have a Flat Nine

Though the sound is odd, minor seven with flat nine is never used in printed music. You will not find it in any of the over forty jazz fake books. It could be used in place of a $7b9$ chord with no third.

Minor Sharp Five

Minor triads with a sharp five are sometimes used, but could simply be named as a major triad on the root of the sharp five tone. A minor sharp five is spelled $A-C+E\#$. Enharmonically, the " $E\#$ " is " F ". $F-A-C$ is F major.

Dominant Chords with Flat Thirteen

This is a device to allow a fifth in the low range and a sharped fifth in the high range by naming the high sharp fifth "flat thirteen", its enharmonic equivalent.

CHORD-NAMING RULES BY CHORD TONE

The Triad Basis of Chords

When the letter name in a chord name (“Bb” in Bbma7) is the entire chord name or when it is followed by a number, the triad basis of the chord is major. When the letter name is followed by “m” (Cm), the basis of the chord is minor. See the other abbreviations in the previous [Triads](#) section.

Thirds

To have a flatted third (b3), minor, diminished or sharp nine must be specified. Chords with minor (“m”, “mi”, or “min”) immediately after the root always have a flatted third (b3). Diminished (“o” or dim.), diminished seventh (“o7”) and half diminished seventh (“Ø” = m7b5) chords also have a flatted third (b3).

Dominant chords have a major third (3) and a flatted seventh (b7). A dominant chord with a sharp nine (#9), such as C7#9, has a synonym of a flatted third. The “#9” is equivalent to “#2” in the lower octave (see [Numbered Tones Above Seven](#)). “#2” is equivalent to “b3”, since it is the only note between major scale tones “2” and “3”.

Numbered Tones above Seven

Numbered tones above seven in chord names indicate the same numbered tone as a the number minus seven, but imply the note is in an upper range of pitch. An octave implies that the eighth note in the scale has the same name as the first. So 8 = 1. Likewise 9=2, 10 = 3, 11 = 4, 12 = 5 and 13 = 6. 15 = 8 = 1, where “15” (fifteen) implies the second octave. In standard music notation, a bracketed group of notes with “8va” inset within the bracket indicates the notes should be played an octave higher. A bracketed group of notes with “15ma” inset within the bracket indicates the notes should be played two octaves higher.

Sevenths, Ninths, Elevenths, Thirteenth

When either of the numbers 7, 9, 11 or 13 are used *immediately* after the triad name (the letter name with an optional [triad abbreviation](#)), the chord has a flatted seventh (b7). Good to know. 9, 11 or 13 are altered only if specified. Those numbers also imply *all odd-numbered tones* through that number. So an eleventh chord has 1, 3, 5, b7, 9 and 11 (though it is usually voiced without the third, unless it is a minor 11 with 1-b3-5-b7-9-11).

When the word “major” (“Δ”, or “M” or “ma”, or “maj”) is used immediately before either of the numbers 7, 9, 11 or 13, the chord has a major seventh (7 or ♮7).

When the word “diminished” (“°”, “dim.” or “dimin.”) is used immediately before the number or word seven, the chord has a double-flat seven.

“Half diminished” (“ø”) is used immediately before the number or word seven (“ø7”), the chord has a flat seven (along with a flat three and flat five).

Ninths, elevenths and thirteenth are altered only if specified. A chord with “9” in its name implies that it also has a seventh, unless it is an add-tone chord (below). A chord with “11” in its name implies that it also has a seventh and a ninth, unless it is an add-tone chord (below). A chord with “13” in its name implies that it also has a seventh, ninth and eleventh, unless it is an add-tone chord (below). Elevenths are usually omitted from thirteenth chords, especially those with a major third (♯3).

Numbers After the Letter Name

Any odd number immediately after the letter name of a chord (i.e. Bb9) implies all the odd numbers through that number. So Ab9 implies the numbers 1, 3, 5, 7 and 9 (with b7, as discussed above).

Additional numbers after that immediately after the letter name only imply the one number they indicate. So, in C13♯11, the “13” is telling you to use all the odd numbers through thirteen (1-3-5-b7-9-11-13). The “♯11” is telling you that the “11” (implied with “13” suggesting the series of odd numbers including “11” in the chord name) is sharp. In the C13♯11 chord, there is only one version of “11”, the “♯11”. Any number or numbers after the initial number after the letter name are there to modify the number rather than adding another version of it. A C7b13 chord would have five notes: 1, 3, 5, b7 and b13 (=♯5).

Altered Fifths

When chords have a flat five, “b5” (flat five) or “diminished” (“°”, “°7”, “ø”) occurs in the chord name. When chords have a sharp five, “♯5” or “augmented” (aug., “+”) occurs in the chord name. Traditionally, “diminished” (“°”, “°7”, “ø”) occurs immediately after the root. “b13” suggests a “♮5” and “♯5”, since “b13” = “b6”, which is the same tone as “♯5”. “♯11” suggests a “♮5” (natural five) and “b5”, since “♯4” = “b5”.

Suspended Fourths and Suspended Seconds

Suspended chords replace the third with the indicated numbered tone. A suspended fourth chord replaces the third (3) with a fourth (4). Suspended second chords replace the third (3) with a second (2). When a chord name states suspended (“sus”) without a number, assume it is suspended fourth.

Double-Altered Fifths or Ninths

As a general rule, each numbered tone is only referred to once in a chord name. However, dominant chords (those with a natural third and flatted seventh) may have both flat five and sharp five. Dominant chords may also have both flat nine and sharp nine. The notations are as follows:

<u><i>chord name</i></u>	<u><i>abbreviation</i></u>	<u><i>abbreviation</i></u>
sharp five and flat five	#5b5	±5
sharp nine and flat nine	#9b9	±9
sharp five, flat five, sharp nine, flat nine	#5b5#9b9	±5±9

PREFERRED CHORD TONES

Since music relies heavily on the human imagination, all notes of a chord don't have to be included to suggest its sound. The essential notes most necessary to suggest a chord's sound are:

**“the third and the seventh (if part of the chord)
and any tone specified by the chord name”**

Roots are usually implied by the chord progression and can be omitted, especially in chords of four or more different notes (such as seventh or ninth chords). An exception is in the first presentation of a chord progression in a solo guitar piece (or a solo piece for any chording instrument, like the piano), where it may be preferable to play chord roots in the bass to clearly define the chord progression.

Many chord tones are implied by our familiarity with a chord and can be imagined when they are left out. These include unaltered fifths in any chord, ninths in eleventh chords, ninths or elevenths in thirteenth chords and any one of the tones in a diminished seventh chord.

Use your own discretion in preserving the emotive quality of a chord when you omit notes. In one arrangement, it may be fine to omit the ninth in a ninth chord and only play a seventh chord, while in another arrangement, the ninth may be essential in producing the mood or may be an important note in [voice leading](#). A note may be essential because it is a common tone with other chords, or where the series of notes created by the highest note (or lowest note) in each chord in a series of chords creates an ascending or descending scale.

Building a Chord Solo

In a basic chord solo, a typical structure is to play the melody and voice a chord where each chord begins. If a melody note occurs where a chord starts, include the preferred tones of the chord *and make sure the current melody note is the highest pitch in the chord*, even if the melody note is not in the chord.

STANDARD CHORD NAME ABBREVIATIONS AND CHORD FORMULAS

THE CYCLE OF THIRDS

the seven number cycle of
every-other number

the seven letter cycle of
every-other letter

In the standard method of construction, chords are constructed from an every-other-note cycle. In numbers, this is 1-3-5-7-2-4-6. In letters, it's F-A-C-E-G-B-D. Common chords called *triads* are most commonly built with three consecutive notes on the cycle, such as "1-3-5" or "2-4-6". Quadrads use four consecutive notes on the cycle: "1-3-5-7" or "2-4-6-1". Pentads use five consecutive notes on the cycle: "1-3-5-7-2" or "2-4-6-1-3" (however, not all of the pentads have an acceptable sound).

CHORDS FROM THE MAJOR SCALE FRETBOARD PATTERN

The Major Scale on One String

The major scale can be used as a reference to compare any scale, chord, or melody. The tones of a scale have defined intervals which can be measured in whole steps. Whole steps equal an interval of two frets, such as the interval between "1" and "2" on either of the diagrams below. When the seven tones of the scale are numbered, consecutive notes are two frets apart, with two exceptions. The interval from "3" to "4" and the interval from "7" to "1" is a half step, or one fret, as you can see below.

The Major Scale on All Strings

Notice in the diagram at the right that the relative pattern for the major scale on each string is the same. It just starts at a different place. Notice that “1” (circled) is five frets toward the guitar body on the next smaller string, except on the second string it is four frets toward the guitar body from the “1” on the third string. This is true for any numbered major scale tone.

Notice also that the pattern repeats on the fretboard every twelve frets. To help recognize this, view the major scale “lines” of notes across the fretboard. From scale tone “2” on the sixth string, the line reads to the right “2-5-1-4-6-2”. From “3” on the sixth string, the line reads “3-6-2-5-7-3”. From “6”, its “6-2-5-1-3-6”. Each of these major scale “lines” run right across the fret. The other four lines have slight deviations. The line at “1”, which is “1-4-7-3-5-1”, where “7-3” are one fret closer to the guitar body. “4-7-3-6-1-4” has “7-3-6” one fret closer to the guitar body. “5-1-4-7-2-5” has “7” one fret closer to the guitar body. “7-3-6-2-4-7” has “4” one fret farther from the guitar body. See [Full-Fretboard Major Scale Visualization](#).

In building the scale pattern on all strings, the next smaller string is “up a fourth”, where in most cases, each note is four scale tones higher on the same fret, except scale tone seven is one fret closer to the guitar body. Each pair of numbers in the perfect fourth sequence “7-3-6-2-5-1-4” is on the same fret of adjacent strings. With scale tones “4 and 7” however, “7” is one fret closer to the guitar body.

Exception: between the third and second string, each pair of numbers in the perfect fourth sequence “7-3-6-2-5-1-4” forms a diagonal shape with the note on the second string one fret closer to the guitar body. With scale tones “4 and 7” however, “7” is on the second string two frets above “4” (closer to the guitar body).

discovering minor and diminished chords within the major scale

In any area of the full-fretboard major scale, combinations of scale tones “2-4-6” or “3-5-7” or “6-1-3” make minor chords. They are named after the first note of each sequence: “2-4-6” is a II minor chord, “3-5-7” is a III minor chord and “6-1-3” is a VI minor chord.

A major scale fingering 7

2-4-6 makes II minor

MAJOR SCALE-TONE ROOT CYCLES

The Stepwise Cycle on the Major Scale

Playing the notes of a major scale in alphabetical or numerical order is called *stepwise order*. The notes can ascend or descend, but the most typical examples of a scale will ascend or ascend, then descend.

Scale tones three to four is an interval of one fret. Scale tones seven to one (at the octave, where the eighth note has the same name as the first note) are also an interval of one fret. Saying they are an interval of one fret is to say there are no notes between them: they are on frets next to each other. The other step to step intervals are two frets apart, indicating that there is a fret between them. The two fret intervals in the major scale are major scale tones one to two; two to three; four to five; five to six; and six to seven.

The Cycle of Fourths on the Major Scale

Playing the notes of a major scale alphabetically and numerically in an order ascending or descending by every fourth note (inclusively) is called *fourths*.

visualizing chord progressions in fourths on the guitar

The piano and guitar are each effective in their own way in visualizing note structures. The piano makes it very easy to see the linear pattern of natural notes on the white keys with the sharps and flats on the black keys. However, it takes a expert pianist to be able to play chord progressions equally well in all keys. The guitar has no markings to indicate natural notes. It does, however provide a structure to see the most important chord progressions with root movement in fourths.

The sequence of perfect fourths in the major scale is 7-3-6-2-5-1-4. It can be thought in a cycle, as shown below, but major scale tones four through seven span the interval of an augmented fourth instead of a perfect fourth. Any four consecutive notes in the major scale constitute a perfect fourth interval of two and a half steps, except steps four through seven, which do not include a half step. An interval of two frets (not counting the starting fret) constitutes a whole step and one fret is a half step. Two and a half steps is five frets (not counting the starting fret).

perfect fourths and perfect fifths

perfect fourths \longrightarrow 7-3-6-2-5-1-4 \longleftarrow perfect fifths (read right to left)

perfect fifths \longrightarrow 4-1-5-2-6-3-7 \longleftarrow perfect fourths (read right to left)

The Cycle of Thirds on the Major Scale

Playing the notes of a major scale alphabetically and numerically in an order ascending or descending by every-other-note is called *thirds*. Each note to the next in this cycle involves a range of three notes in the scale inclusively, hence the name *thirds*. This cycle of thirds on the major scale is called the *major scale-tone cycle of thirds*, or the *major scale-tone tertian cycle* (tertian means “of threes”).

Scale tones one to three are interval of four frets (three “empty” frets between them). Scale tones four to six are also four frets, and scale tones five to seven are four frets. These four fret intervals can be called *major thirds*, since they are the same as the interval from major scale tones one to three. A minor third is a three-fret interval (two “empty” frets between them).

ARC-BASED TRIADS WITH ROOTS IN FOURTHS

Triad Arcs

I refer to the three groups of notes that represent all major chord tones or all minor chord tones on the fretboard as *arcs*, since they are the notes conceptually embraced by an arc, as shown below.

Six Triads with Roots Ascending in Fourths

In the IIIIm-VIm-IIIm-V-I-IV chord progression used in this section, the chord roots ascend in fourths. Reading down each page in columns shows the arc for a triad. For example, the Em chords are second in each row on the next page. Read their succession down the page to see the D/C form minor arc shown above. Likewise, the G chords are fifth in each row on the next page. Read their succession down the page to see the E form major arc shown above

MAJOR SCALE-TONE THIRDS, TRIADS & QUADRADS

[play this section on Youtube](#)

C Major Scale on Each String

♩ = 90

C major scale on the fifth string from "1" to "1".
Note that it is one fret between 3-4 and between 7-1 (1=8).

C major scale on the fourth string from "3" to "3".
Note that it is one fret between 3-4 and between 7-1 (1=8).

C major scale on the third string from "5" to "5".
Note that it is one fret between 3-4 and between 7-1 (1=8).

C major scale on the second string from "7" to "7".
Note that it is one fret between 3-4 and between 7-1 (1=8).

C Major Scale-Tone Thirds , Triads and Sevenths (Tertian Quadrads)

C major scale with thirds
Each lower-pitch note is harmonized with a note two scale tones higher. "1" is harmonized with "3".

C major scale with (tertian) triads (three-note chords built in thirds).
Each lower-pitch note is harmonized by adding two notes in the every-other-note cycle of thirds: 1-3-5-7-2-4-6-1-3, etc.
Each triad uses three consecutive notes in the 1-3-5-7-2-4-6 cycle.

C major scale with (tertian) quadrads (four-note chords built in thirds).
Each lower-pitch note is harmonized by adding three notes from the every-other-note cycle of thirds: 1-3-5-7-2-4-6-1-3, etc. Each triad uses four consecutive notes in the 1-3-5-7-2-4-6 cycle.

TRIAD SUBSETS OF MAJOR SCALE

On the following pages, the parts of major scales that make up each of the chords are shown. When the part of a scale is shown that makes up a particular chord, it will be called a *subset* of the scale. An arpeggio is a chord played one note at a time. Here is a linked list of the chord and arpeggio subsets of the major scale that are shown:

- ♦ [Major Scale-Tone Triad Arpeggios](#)
- ♦ [Close-Voiced, Root Position Major Scale-Tone Triads](#)
- ♦ [Close-Voiced, First Inversion Major Scale-Tone Triads](#)
- ♦ [Close-Voiced, Second Inversion Major Scale-Tone Triads](#)
- ♦ [Open-Voiced, Root Position Major Scale-Tone Triads](#)
- ♦ [Open-Voiced, Major Scale-Tone Triads in Perfect Fourths](#)
- ♦ [Close-Voiced, Major Scale Tone Triads in Perfect Fourths](#)

Major Scale-Tone Triad Arpeggios

Play on the fretboard by column in position or by row horizontally.

	fingering 1	fingering 2	fingering 3	fingering 4	fingering 5	fingering 6	fingering 7
major scale							
root on FIRST scale tone							
root on SECOND scale tone							
root on THIRD scale tone							
root on FOURTH scale tone							
root on FIFTH scale tone							
root on SIXTH scale tone							
root on SEVENTH scale tone							

Close-Voiced, Root Position Major Scale-Tone Triads

three note triads

stepwise root position

play by row for stepwise order

	fingering 1	fingering 2	fingering 3	fingering 4	fingering 5	fingering 6	fingering 7
root on SIXTH STRING							
root on FIFTH STRING							
root on FOURTH STRING							
root on THIRD STRING							

root position, roots in fourths, little finger bass

cycle through each pair of rows for root movement in fourths

roots on
SIXTH
and FIFTH
